HOW TO USE THIS BOOK

INTRODUCTION

Thank you for purchasing Prima's Official Game Guide to *MMA*. This guide is packed with tips and tactics to help you smash rivals in the cage, whether you're playing online or guiding your warrior along his legendary *MMA* career.

HOW TO USE THIS BOOK

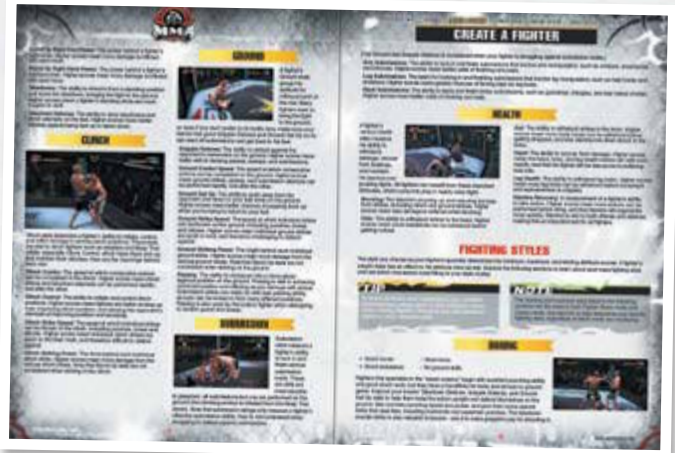

The information in this guide is presented in several chapters—here's what you'll find in each one.

TRAINING

Turn to the next chapter to review the fundamentals of *MMA*'s gameplay. Here we review the fine arts of striking, clinch work, grappling, and positions, and teach you how to conduct business in the cage like a pro.

CREATE A FIGHTER

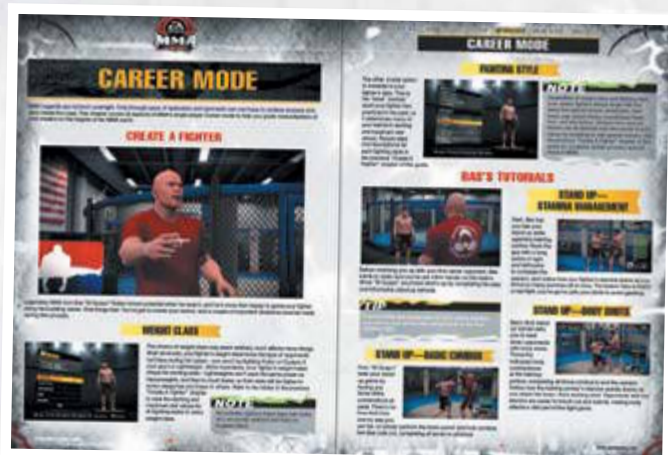

Creating custom fighters is a big part of *MMA*, so we've devoted an entire chapter to the process. Turn here for informative looks at each fighting style and every special move. Handy tables give you the minimum, maximum, and starting stats for each style in every weight class as well.

HOW TO USE THIS BOOK

CAREER MODE

Flip to this chapter for all things Career mode. Here we give tips on completing every training exercise you can perform at the various gyms. A quick-reference table is provided so you can quickly identify which exercises are available at each gym as well.

MMA ROSTER

MMA's roster boasts nearly 60 well-known warriors, and we've spared no effort to provide you with a complete look at each one. Flip through the roster sections to view each fighter's stats, moves, and strategies, along with other interesting info such as the fighter's professional record and fight history.

ONLINE ACTION

This chapter covers the ins and outs of online play. Turn here to learn about importing Career fighters and your Fighter Share options, along with a recap of vital fighting strategies.

APPENDIX

The final pages of the guide provide a variety of quick-reference tables. Flip here for a convenient source of stat comparisons and the like.

WORKING THE CLINCH

THE GROUND GAME

TRAINING

MMA is a complex sport of attack and defense, positions and counters, actions and reactions. This chapter covers all the nuts and bolts of the fight game, teaching you how to get things done on the feet, in the clinch, and on the ground.

CONTROLS

MMA allows you to use one of two control schemes: Total Strike Control (TSC) or Classic. The thumbstick is used to throw strikes in the default TSC mode; switch to Classic mode if you prefer to press buttons to strike. We found TSC mode a little better for grappling, while Classic mode seemed to make things easier on the feet. Experiment with both control styles to discover which you prefer.

STAMINA

Stamina is life in the cage—a measure of a fighter's energy. When a fighter is full of stamina, he's able to unleash furious offense and power his way out of dangerous holds. When a fighter is exhausted, he's barely able to move, let alone defend himself or mount much offense. Conserving stamina and wearing away at your opponent's gas tank is therefore a vital aspect of MMA.

Here are the benefits of having plenty of stamina:

- » Your strikes are much faster and more powerful.
- » Your movement speed and blocking ability are much higher.
- » Your ability to pass guard and apply submission holds is much greater.
- » Your ability to deny your opponents' takedowns, passes, sweeps, and submissions is much improved.

CONTROLS

STAMINA

STRIKING

WORKING THE CLINCH

THE GROUND GAME

CONSERVING STAMINA

The more action you take in a fight, the more stamina you consume. Winging wild punches and grappling relentlessly will cause your fighter

to gas out fast, so pick your attacks carefully and conserve your stamina. Use short bursts of offense to score damage or bring the fight to a new area, giving your fighter the chance to recover afterward. Keep plenty of gas in the tank so you can defend effectively and explode with offense at a moment's notice.

CATCHING YOUR BREATH

When your fighter starts sucking wind, stop attacking and play defense to give him a chance to recover. If you're on your feet, back away

from your rival and start blocking—your stamina slowly refills while you're not striking or attempting to grapple. As your stamina returns and your mobility improves, begin dashing away from aggressive adversaries, looking to set up a shot or counter.

In the clinch, recover stamina by blocking your rival's attacks—this also tires him as he struggles to land strikes. Don't strike back, simply defend as your stamina refills. Beware of takedowns in the clinch, however—you're more susceptible to being taken down while you're blocking.

On the ground, recover stamina by blocking your rival's strikes, and by denying his attempts at improving position and applying submissions. This also tires your rival as he struggles to work. Try to recover your stamina on the ground before attempting to improve position.

WEARING OUT RIVALS

Attacking your rival's stamina is just as important as protecting your fighter's own gas tank. Body shots are the best

way to tire your rivals—these sap their stamina and can even drop opponents if you land enough flush blows. Throw hard jabs, straights, and kicks at your opponent's midsection while standing, and punish his body up close with hard hooks and uppercuts.

In the clinch, throw punches and knees to the body to gas opponents out, setting them up for debilitating slams. Be careful: Your stamina drains quickly when your clinch strikes are blocked—either transition to a takedown, break away, or simply pause your assault and catch your breath.

On the ground, drill your opponents' ribs with punches and knees to beat the stamina out of them. Tired opponents are easier to dominate on the ground because they struggle to deny passes and submission attempts. Soften opponents up with body shots, then improve position and lock in a fight-ending sub.

STRIKING

The fine art of striking is easy to grasp, but challenging to master. Every fight begins on the feet, so it's important to know how to handle yourself in this chaotic position.

PUNCHING

Punches are versatile strikes. String together fast boxing combos of jabs and hooks to back opponents up or get them blocking—this creates opportunities for you to clinch up or shoot in for a takedown. Use punches defensively as well, countering forward-moving opponents. Let's review the various punches you can throw.

Jab

The jab is a long, straight punch thrown by a fighter's lead hand (usually the left). Jabs are the fastest and longest punches you

can throw, but they're also the weakest. Jab early and often to find your range and interrupt your opponents' combos as you dash about the ring. Because jabs are thrown so quickly, there's little chance of being countered.

Straight

Jabs thrown with the back hand (usually the fighter's right) are often referred to as "straights." These fast punches pack

a bit more power than lead jabs, but they're slightly slower to find their mark. Use straights to counter kicks and hooks, and unleash jab-straight combos to make your fighter wing punches as fast as he's able.

Hook

Hooks are long, versatile punches. They're slightly slower than jabs and straights, but almost as long and much more powerful.

Combine hooks with jabs and straights, using the strikes' similar length to back up opponents with fast, dangerous combos. Hooks can really rock opponents if they don't see them coming, so throw plenty of hooks if your fighter has exceptionally fast hands.

Uppercut

Uppercuts are the most powerful punches your fighter can throw aside from special strikes. However, they're also somewhat

slow and have a short range. Depending on the opponent and your fighter's hand speed, you may or may not find uppercuts to be effective—fast strikers can easily counter these power shots, so they can get you into trouble. Primarily use uppercuts after you've cornered your opponent near the cage and are hunting for the big KO.

NOTE

This chapter only covers the basics—refer to the next chapter, "Create A Fighter," to learn about every special strike, such as the overhand punch and flying knee.

KICKING

Kicks are powerful strikes with superior range. Certain fighters are not skilled at kicking, however, so consider your warrior's attributes and strengths when deciding how often to include these strikes in your offense. Fighters that can kick effectively have the advantage on the feet, because kicks are great at keeping opponents off balance and at bay.

CONTROLS

STAMINA

STRIKING

WORKING THE CLINCH

THE GROUND GAME

NOTE

See the next chapter, "Create A Fighter," to learn all about each fighting style, including the meanings behind all of the various fighter attributes. (Foot Speed, Punch Combo Speed, etc.)

Leg Kick

Leg kicks are the only strikes capable of damaging a fighter's legs. If your fighter excels at kicking, use leg kicks like a second jab to help you find your range, interrupt the opponent's attacks, and set up your combos. Batter your rivals' legs to slow them down dramatically, reducing their ability to avoid strikes and taking the power out of their takedowns. Leg kicks can be incredibly effective in any fight, so consider them when devising your game plan.

Body Kick

Body kicks batter a fighter's ribs, damaging his torso and eroding his stamina. Blast your rivals with sharp body kicks to knock the wind from their lungs.

Attacking the body is an important strategy in MMA, and the body kick's long range and heavy power make it the ideal strike to use.

Head Kick

Most fighters own the "roundhouse head kick" special move, allowing them to throw feet at their opponents' faces. A shin to the chin can rock anyone if they're caught flush, but head kicks are slow to perform and somewhat easy to evade and counter. Only those with great kickboxing skill should make liberal use of these advanced kicks.

BLOCKING

"Protect yourself at all times"—it's the first rule of combat sports. Defense is vital in MMA, and blocking is the most basic technique—simply cover up to conserve stamina and lessen the impact of inbound strikes. Fighters with high Blocking scores can withstand quite a beating while blocking. All fighters block poorly when rocked or gassed, however.

CAUTION

Your fighter is more susceptible to takedowns while blocking, so block less when facing skilled grapplers.

PARRYING

Parrying is more challenging than blocking, but the potential benefits are greater. Block while first gauging your rivals' striking habits, then begin

to anticipate their strikes and parry them to the right and left, deflecting their go-to blows. A successful parry means your fighter takes no damage, and he also knocks his rival off balance for an instant, creating a brief window for a counter.

STUFFING TAKEDOWNS

Some fighters have limited striking ability, but are extremely dangerous grapplers. More often than not, these fighters

will look to shoot in on the feet for takedowns, using their rudimentary striking as a means of bringing the fight to the mat. When facing a dangerous grappler, be conservative on the feet and remain ready to sprawl as a defense against his takedowns and clinch attempts. Focus on stuffing his shots and keeping the fight upright.

DOWNED OPPONENTS

Occasionally, one standing fighter faces an opponent who's lying on the ground, on his back in open guard. For example,

this happens when the top ground fighter decides to stand up and return to his feet. If your fighter is the standing combatant, take advantage of these opportunities by throwing relentless leg kicks at the downed opponent, battering his exposed legs and doing a number on his mobility before letting him up.

When faced with a downed opponent, hit the Takedown button to stack up in guard. Here, you are in position to land some heavy punches, a kneebar, or hit a major pass to side control. Beware of upkicks from the bottom while controlling this precarious position, however—they add up.

If you just want to join your rival on the mat, the safest option is to move forward while pressing the Takedown button—

this causes you to dive directly into the downed opponent's full guard, rather than stacking up. Now you can pass to work for arm and neck submissions.

DAMAGE

By default, the only gauge that remains onscreen at all times is the all-important stamina meter. Three other meters are

also hidden in the background, though—the head health, torso health, and legs health meters. These deplete as your fighter takes damage to various areas of his body, and they

slowly refill when he avoids being hit. When a health meter falls below half, it becomes visible near the stamina gauge to alert you.

NOTE

Suffering regular damage to a body area shortens the length of its health meter over time, making the fighter even more susceptible to further damage to that area.

GETTING ROCKED

When two guys stand and bang, it's not long before someone gets rocked. This usually occurs when one fighter is caught flush

with a strike that they didn't see coming. Rock your opponent by interrupting his combos with sharp counter straights and hooks, catching him off guard in exchanges. While rocked, a fighter loses his ability to effectively attack and must focus on defending until his head clears (the head health meter refills).

TIP

Even if your fighter isn't a fantastic grappler, try shooting for a takedown after you've been rocked. Chances are the opponent will be striking wildly and looking for the KO—this makes them easier to surprise. Score a takedown and then let your head clear.

If a fighter's head or body health meter becomes fully depleted, he becomes badly rocked, collapsing to the ground and balling up in self-preservation mode. As the aggressor, wiggle the thumbstick to seize the opportunity and pound out badly rocked foes. If you're the one who's on the floor, mash the indicated button as fast as possible for a chance at recovering your composure and fighting back from the brink of defeat.

CONTROLS

STAMINA

STRIKING

WORKING THE CLINCH

THE GROUND GAME

WORKING THE CLINCH

The clinch is a strenuous position that quickly takes its toll on both fighters. There's no room to parry or evade while tied up in the clinch, so blocking is your only defensive option against powerful, short range strikes unleashed in the position. The clinch is ideal against elusive strikers because it helps you pin them down—but it should be used with caution when facing powerful grapplers and submission artists, who may use the position to achieve takedowns more easily.

ENTERING THE CLINCH

Your fighter's Clinch Control attribute is the primary determining factor in his ability to tie up foes. First, back up the opponent with a barrage of rapid jabs, straights, and hooks, aiming to corner him near the cage. Clinch once he's trapped and forced to block, mashing him against the fence to gain superior control.

The fighter who initiates a clinch always enters the position with the offensive advantage—the defending fighter must seek to improve his position or break free of the hold. Two clinch options are available, each with its own merits: the Muay Thai clinch and the double underhook clinch.

Muay Thai Clinch

In the Muay Thai clinch, the dominant fighter wraps his hands behind the opponent's neck to keep him close and control his posture.

The ample distance between the fighters' torsos allows the aggressor to land devastating knees, punches, and elbows to the defender's head and body. Use the Muay Thai clinch to batter opponents with strikes if you're the brawler sort, breaking free or switching to double underhooks once the adversary begins to block.

TIP

Land knees to the body in the Muay Thai clinch to quickly deplete your rivals' stamina. This sets the stage for a transition to double underhooks and a brutal slam.

Double Underhook Clinch

In the double underhook clinch, the dominant fighter wraps his arms under his opponent's arms and around his back, controlling his adversary's body weight. The closeness of the position makes striking less effective, but also promotes devastating slams. Scoring takedowns from the double underhook clinch lands your fighter in side control—a dominant ground position that's just one pass away from mount. Grapplers and ground fighters should exploit the double underhook clinch to help them secure takedowns.

Over Under Clinch

The over under clinch cannot be directly initiated—it only occurs when the defending clinch fighter manages to improve his position. Neither

fighter has the advantage in the over under clinch, unless one of the fighters has the other pinned against the cage, of course. Striking is somewhat limited in this position—blows can be thrown with force, but not in rapid combos. Takedowns are far more likely to occur than knockouts in the over under clinch, making this a favorable position for grapplers and ground fighters.

TIP

If you're an expert grappler and your rival foolishly clinches with you, improve to the over under clinch and then score the takedown.

ADVANCING POSITION

Both fighters are able to improve their position in the clinch. Aggressors can switch directly between the dominant Muay Thai clinch and double underhook positions, while defenders must advance to the over under clinch before they can improve to a dominant posture. Your fighter's Clinch Control attribute is the primary factor in determining his ability to maintain and improve position in the clinch.

NOTE

Your controller vibrates when your rival tries to improve his position or break free of your clinch—immediately deny him to maintain control.

BREAKING AWAY

If your fighter is better at striking than ground fighting, breaking away is usually your best option when the opponent clinches with

you. Block strikes and deny takedowns to tire your rival, then use your superior stamina to help you break free. Exhausted fighters are easily controlled in the clinch, so protect your ribs against body shots as you look to break free.

STRIKING FROM THE CLINCH

The confines of the Muay Thai clinch allow the aggressor to inflict plenty of pain. Brutalize opponents with fast knees, punches, and elbows in this dominant striking position, but strike tactfully—you're easier to shrug off and toss to the mat when you open up too much with your strikes.

Clinch fighting is very exhausting, especially when the defending fighter blocks your strikes. Stop attacking to recover stamina and either break away or score a takedown—there's no sense in wasting all of your stamina on a few blocked knees.

CLINCH TAKEDOWNS

Shooting for takedowns on the feet is dangerous—opponents can counter your shots with fast knees or catch

you in a dangerous choke. Clinch takedowns are much safer to attempt and easier to accomplish because you've already tied up your foe. They're especially easy to achieve from the over under and double underhook clinch positions.

You land in side control when you complete a takedown from the double underhook clinch.

EXPLOITING THE CAGE

Using the cage to your advantage is the backbone of a strong clinch game. Initiate clinches near the fence, pressing your opponent against the wall to gain superior control. If you've clinched up in the center of the ring, walk your opponent backward, throwing punches and elbows at his head while maneuvering him into the unyielding steel.

You have the advantage when leaning on your rival against the cage—your clinch strikes are more powerful and your takedowns are more dominant. In fact, the over under clinch takedown lands you in side control instead of half guard when you perform it from this advantageous position.

CONTROLS

STAMINA

STRIKING

WORKING THE CLINCH

THE GROUND GAME

It's important for defending fighters to break away from cage clinches as soon as possible. Block strikes and deny takedowns to tire the aggressive rival before slipping away. Be especially guarded against takedowns when the opponent has you stuffed against the fence—many land you on your back with the opponent in side control.

THE GROUND GAME

Fights change dramatically once the action hits the mat. Though one fighter may have a modest advantage over his opponent on the feet or in the clinch, the ground game greatly favors one fighter over the other—the man on top.

NOTE

This section focuses on the fundamentals of grappling and various ground positions. Submissions are special moves in MMA, so refer to the following “Create A Fighter” chapter to learn about each one.

TIP

Takedowns are also easy to accomplish in the over under clinch, so if your opponent foolishly clinches with you, improve your position and then look for the immediate takedown.

TAKEDOWNS

Before you can work your ground game, you must first bring the fight to the floor. The most straightforward way to do this is by shooting

for takedowns on the feet. Completing a stand up takedown always lands you in your opponent's half guard, ready to apply a kimura submission (assuming you know the submission) or work some ground and pound. The higher your fighter's Takedown score, the more success he'll have shooting in.

Takedowns can also be accomplished from the clinch—these are ideal when the opponent is countering your standing

shots with knees and chokes. Pressure your opponent into giving up the double underhook clinch, which favors takedown slams.

PASSING GUARD

Most takedowns land the aggressor in the opponent's half guard, where little damage can be done outside of light strikes and the possible kimura submission. However, by passing to side control and then to mount, the top fighter places himself in dominant position, ready to rain down devastating fists and elbows. Many more submission opportunities present themselves in the side control and mount positions as well, making a fighter's Passing attribute a major facet of his ground game.

CONTROLS

STAMINA

STRIKING

WORKING THE CLINCH

THE GROUND GAME

TIP

Throw body strikes to drain your opponents' stamina and get them to block, then pass their guard. Don't strike too frequently, however, or you may lose position.

GROUND AND POUND

The striking advantage is the primary reason why most fighters seek to bring the fight to the floor. The top fighter's punches gain all the force of gravity, while the bottom fighter has little countering power and nowhere to hide. Punish the opponent's body to drain his stamina and force him to block, then pass his guard to improve your position. Keep striking to pass your way to full mount, then posture up to rain down heavy leather.

Ground and pound can also be effectively administered from within an opponent's guard, but this is a far more dangerous position for the top man. This is because the fighter on bottom can land powerful upkicks or slap on inverted kneebars and triangle

chokes when stacked up, while triangles and armbars can be used against postured up foes. Keep out of the opponent's guard when fighting submission experts, working to pass and strike from mount instead.

SUBMISSIONS

Ground and pounders can be brutal, but submission artists are the real sharks of the ground world. Subs can be locked in from almost any position on the ground, so passing guard isn't really a necessary skill for submission practitioners.

CAUTION

Failing a submission battle usually lands you in a compromising position, such as on your back with the opponent on top. Avoid attempting submissions until you've worn down your rival with strikes and are fairly certain you can finish.

Limb Submissions

Manage your stamina carefully when caught in a battle over a leg or arm lock—don't mash the button or you'll quickly gas out. Tap it in short, rapid bursts to apply steady pressure, recovering stamina during the brief pauses between working the hold. The victim automatically escapes if the aggressor runs out of stamina, so be careful not to gas out.

NOTE

The camera zooms in dramatically as submissions are made tighter and pulls back as victims start to break free.

CONTROLS

STAMINA

STRIKING

WORKING THE CLINCH

THE GROUND GAME

Choke Submissions

Choke holds play out differently than limb locks. In these submission battles, each player must strive to find the elusive “zone” by slowly rotating his thumbstick. The controller vibrates when the zone is found—stick with it to either tighten the choke or begin to slip free.

NOTE

The “zone” is easier to find when you have lots of stamina. Release the thumbstick occasionally to recover stamina and improve your odds of finding the zone.

CAUTION

Don't move your thumbstick too rapidly or you'll never find the zone during chokes—you'll only gas out your fighter!

GROUND DEFENSE

Taking someone down and pounding on him is one thing—defending yourself on the ground is a whole other matter. A fighter's Blocking, Grapple Defense, and Ground Get Up attributes are the most important things to look at when considering his ground defense.

Blocking

Blocking lessens the damage from ground strikes, taking the sting out of your rivals' ground and pound. Block your opponents' strikes to tire them out while minimizing damage and recovering stamina. Beware, however: your fighter's guard is easier to pass while blocking, and he's more vulnerable to

submissions as well. Don't block unless you really need to; focus on improving your position instead.

TIP

If your opponent has you mounted and your head has taken a pounding, stop blocking and start parrying. This is riskier than blocking because you could be caught flush, but in this situation, you'll soon be knocked out if you continue to block, and parrying a series of blows gives your head a chance to clear.

Your fighter's Grapple Defense attribute is considered when he tries to deny passes, sweeps, submission attempts, and when struggling

to escape from submission holds. His Ground Get Up attribute determines his ability to kick opponents off him and pop back up to his feet. Both of these are vital to feeling comfortable on the ground—the former helps you control the action, while the latter lets you quickly escape to your feet if things aren't going your way.

NOTE

Your controller vibrates whenever your rival attempts to pass, sweep, or submit you. Hit the Deny button immediately to utilize your fighter's Grapple Defense and prevent the attempt from succeeding.

The Grapple Defense attribute can be used help you get back to your feet as well. Recover full guard after a takedown, then simply focus on denying your opponent's attempts at improving position. Keep your rival trapped in full guard to stall the action until the ref is forced to break things up and return the fight to the feet.

CREATE A FIGHTER

Building your own bad boy is an important facet of MMA, and we've devoted an entire chapter to aiding you in this critical process. Here you'll discover the importance behind every attribute, along with fighting style descriptions, and a complete list of the starting, minimum, and maximum attribute values for each fighting style in every weight class. The chapter concludes with a look at the more than 30 special moves you can bestow upon your warriors, with tips on how to use and combine them. If you're looking for help in creating the ultimate mixed martial artist, look no further.

ATTRIBUTES

The many attributes that determine a fighter's skill and ability in the cage are collectively known as attributes. These numbers form the backbone of every fighter and determine their ability to get things done in the cage. Attribute scores can range from 33 to 100—the higher an attribute, the more dominant the fighter is at that particular aspect of battle.

TIP

Whenever possible, review your opponents' attributes before fights, carefully considering their strengths and looking for holes in their game to exploit.

NOTE

Don't read too much into the attribute averages for a fighter's major attribute categories (Stand Up, Clinch, Ground, etc.)—these can be very deceptive. For example, a fighter may end up with a lackluster Stand Up average if his takedowns are poor—but could still have KO power in his fists. Look over a fighter's complete attributes when gauging his strengths and weaknesses, not just the overall averages.

STAND UP

A fighter's Stand Up attributes are used to measure his skill and ability to strike and evade on the feet. Stand Up attributes are therefore most important to strikers, but even grapplers can benefit from a strong takedown ability, or fast hands that can help them set things up. Here's the meaning behind each Stand Up attribute:

Foot Speed: The speed at which individual kicks are thrown. Higher scores mean swifter individual kicks.

Hand Speed: The speed at which individual punches are thrown. Higher scores mean faster individual punches.

Kick Combo Speed: The speed at which kicks can be thrown in combination. Higher scores mean you can rattle off kick combinations faster.

Kick Range: The length of a fighter's kicks. Higher scores mean a longer reach, which helps you keep opponents at bay and score damage from outside of countering range.

Movement Speed: The speed at which a fighter moves about the cage. Higher scores mean swifter dashes and movements, which help a fighter create angles, slip into and out of striking range, and escape dangerous standing positions.

Punch Combo Speed: The speed at which punches can be thrown in combination. Higher scores mean you can string together blistering punch combos.

Punch Range: The length of a fighter's punches. Higher scores mean a longer reach, which helps you keep opponents at bay and score damage from outside of countering range.

Stand Up Left Foot Power: The power behind a fighter's left kicks. Higher scores mean more damage is inflicted with each blow.

Stand Up Left Hand Power: The power behind a fighter's left punches. Higher scores mean more damage is inflicted with each blow.

ATTRIBUTES

FIGHTING STYLES

SPECIAL MOVES

Stand Up Right Foot Power: The power behind a fighter's right kicks. Higher scores mean more damage is inflicted with each blow.

Stand Up Right Hand Power: The power behind a fighter's right punches. Higher scores mean more damage is inflicted with each blow.

Takedowns: The ability to shoot in from a standing position and score the takedown, bringing the fight to the ground. Higher scores mean a fighter's standing shots are much tougher to stuff.

Takedown Defense: The ability to deny takedowns on the feet. Higher scores mean better defense against being tied up or taken down.

CLINCH

Clinch attributes determine a fighter's ability to initiate, control, and inflict damage in various clinch positions. These attributes are vital to clinch fighters such as wrestlers and Muay Thai artists, especially Clinch Control, which helps them lock up and maintain their clinches. Here are the meanings behind each attribute:

Clinch Combo: The speed at which consecutive actions can be completed in the clinch. Higher scores mean clinch strikes and takedown attempts can be performed rapidly, one after the other.

Clinch Control: The ability to initiate and control clinch positions. Higher scores mean fighters are better at tying up foes, improving clinch position, and denying the opponent's attempts at improving position and escaping.

Clinch Strike Speed: The speed at which individual strikes can be thrown in the clinch, including punches, knees and elbows. Higher scores mean individual clinch strikes are quick to find their mark, and therefore difficult to defend against.

Clinch Striking Power: The force behind each individual clinch strike. Higher scores mean more damage from the various clinch blows. Note that Stand Up attributes are not considered when striking in the clinch.

GROUND

A fighter's Ground attributes gauge his aptitude for rolling around on the mat. Many fighters seek to bring the fight to the ground,

so even if you don't prefer to do battle here, make sure your warrior has good Grapple Defense and Ground Get Up so he can ward off submissions and get back to his feet.

Grapple Defense: The ability to defend against the opponent's maneuvers on the ground. Higher scores mean better skill at denying passes, sweeps, and submissions.

Ground Combo Speed: The speed at which consecutive actions can be completed on the ground. Higher scores mean ground strikes can be performed rapidly, one after the other.

Ground Get Up: The ability to push away from the opponent and return to your feet while on the ground. Higher scores mean better chances of popping back up when you're trying to return to your feet.

Ground Strike Speed: The speed at which individual strikes can be thrown on the ground, including punches, knees, and elbows. Higher scores mean individual ground strikes are quick to land, and therefore challenging to defend against.

Ground Striking Power: The might behind each individual ground strike. Higher scores mean more damage from the various ground blows. Note that Stand Up attributes are not considered when striking on the ground.

Passing: The ability to maneuver into a more advantageous position on the ground. Passing is vital to achieving dominant position and inflicting severe damage with strikes. Submission artists can make do with less passing ability, as subs can be locked in from many different positions. Passing is also used by the bottom fighter when attempting to reclaim guard and sweep.

SUBMISSION

Submission attributes measure a fighter's ability to lock in and finish various submission holds. These are attributes

are most valuable to grapplers; all submissions but one are performed on the ground (the climbing armbar is initiated from the Muay Thai clinch). Note that submission ratings only measure a fighter's offensive submission ability; they're not considered when struggling to defend against submissions.

ATTRIBUTES

FIGHTING STYLES

SPECIAL MOVES

(The Ground attribute Grapple Defense is considered when your fighter is struggling against submission holds.)

Arm Submissions: The ability to lock in and finish submissions that involve arm manipulation, such as armbars, americanas, and kimuras. Higher scores mean better odds of finishing arm subs.

Leg Submissions: The talent for locking in and finishing submissions that involve leg manipulation, such as heel hooks and kneebars. Higher scores mean greater chances of forcing taps via leg locks.

Neck Submissions: The ability to seize and finish choke submissions, such as guillotines, triangles, and rear naked chokes. Higher scores mean better odds of choking out rivals.

HEALTH

A fighter's various Health attributes measure his ability to withstand damage, recover from beatings, and maintain

his stamina over grueling fights. All fighters can benefit from these important attributes, which come into play in nearly every fight.

Blocking: The talent for covering up and reducing damage from strikes, including clinch and ground strikes. Higher scores mean less damage is suffered while blocking.

Chin: The ability to withstand strikes to the head. Higher scores mean less chance of being rocked due to head strikes.

Gut: The ability to withstand strikes to the torso. Higher scores mean more body blows can be withstood before getting dropped, and less stamina lost when struck in the torso.

Heart: The ability to recover from damage. Higher scores mean the head, torso, and leg health meters will refill more rapidly, and that the fighter will be less prone to suffering bad cuts.

Leg Health: The ability to withstand leg kicks. Higher scores mean more leg kicks can be withstood before movement and explosiveness is crippled.

Stamina Recovery: A measurement of a fighter's ability to take action. Higher scores mean more actions can be performed before tiring, and that stamina will regenerate more quickly. Stamina is vital to both offense and defense, making this an important attribute for all fighters.

FIGHTING STYLES

The style you choose as your fighter's specialty determines his minimum, maximum, and starting attribute scores. A fighter's weight class has an effect on his attribute attributes as well. Explore the following sections to learn about each base fighting style and see which one seems most fitting to your style of play.

TIP

If certain attributes aren't important to you, consider lowering these ratings down to their minimum values when creating fighters. This gives you extra points to spend on more attractive attributes.

NOTE

The starting and maximum attributes listed in the following sections are the same in both Fighter Share mode and Career mode. Use this info to help determine your favorite fighting style, regardless of which mode you're playing.

BOXING

- + Quick hands
- + Good endurance
- Weak kicks
- No ground skills

Fighters that specialize in the "sweet science" begin with excellent punching ability and good clinch work, but they have a low affinity for kicks and almost no ground game. Improve your boxers' Takedown Defense, Grapple Defense, and Ground Get Up attributes to help them keep the action upright and defend themselves on the ground. Max out their punching speed and power, and give them every special strike that uses fists, including overhands and superman punches. The takedown counter strike is also valuable to boxers—use it to make grapplers pay for shooting in.

BRAWLER

- + Powerful puncher
- + Can take a beating
- Bad endurance
- No ground skills

Brawlers are slower than boxers, but their punches can be made even more powerful. Brawlers can also be made more durable and resilient than boxers, though they suffer from a poor maximum stamina rating. Outfit brawlers with many of the same specials you'd give to a boxer, focusing on keeping the fight standing and inflicting punishment with the brawler's heavy hands. Increase your brawlers' Takedowns, Grapple Defense, and Passing attributes to make him an effective ground and pounder, or boost his clinch attributes if you prefer to work from that position instead of the ground.

GENERALIST

- + Variety of skills
- + Good endurance
- Not dominant in any skill
- Lacks power

Generalists are well-rounded fighters with no shining advantage in any area. This makes the generalist style a good fit for counter fighters, or for those who've yet to determine where they prefer to do battle in the cage. Generalists can be made into effective strikers, but their lack of power can get them into trouble against knockout artists. Give generalists a good ground game and strong submissions in at least one category (arm, neck, or leg) to give yourself options on how to finish fights.

JIU JITSU

- + Excellent submissions
- Weak striking
- + Good endurance
- Can't take a hit

Jiu jitsu practitioners excel in the fields of ground offense and defense. They have little talent on the feet, so max out their Movement Speed, Takedowns, and Clinch Control attributes to help them bring the fight to the floor. True jiu jitsu buffs will top off all of their submission attributes and ensure they know how to apply every deadly hold—this makes them extremely dangerous to roll with. Make sure to give your jits fighters the “major pass” and “submission chaining” specials to make them far more deadly on the mat, and boost their pathetic initial Health attributes to help them survive long enough to secure the tap.

JUDO

- + Great takedowns from the clinch
- + Good on the ground
- Weak striking
- Glass jaw

Judo artists do their best work in the clinch and on the ground. They struggle on the feet due to lackluster striking and poor defensive attributes, however. Max out their Movement Speed and Takedowns attributes to help them bring the action to the mat. Top off your judo fighters' Clinch attributes as well to ensure their dominance in the clinch, and increase their Arm or Neck Submission ratings to help them secure the tap on the mat. Boost your judo warriors' Chin and Leg Health to help them survive long enough on the feet to bring the fight into their world. The climbing armbar is an excellent special move for judo artists, helping them roll adversaries into armbars from the Muay Thai clinch.

KICKBOXING

- + Strong striker
- + Good strike defense
- No submission skills
- No ground skills

Kickboxers excel at thrashing adversaries on the feet, but their pathetic grappling ability leaves major holes in their overall game. Plug these up by boosting their Takedown Defense, Clinch Control, Grapple Defense, and Ground Get Up attributes. Kickboxers can end things quickly on the feet—max out their kicking ability, then use leg and body kicks to wear down opponents during fights. Be sure to give your kickboxers plenty of special strikes, such as the “takedown counter strike” and flying knee. The “catch punch” special can also help them turn things around on the ground and get back to their feet.

MUAY THAI

- + Great kicks
- + Violent in the clinch
- No submission skills
- No ground skills

Muay Thai artists are powerful kickers and excellent clinch fighters, but their punches lack power and their ground game is laughable. Use their strong kicks to wear down opponents from outside of countering range, clinching up when you really want to pour on the pain. Boost your Muay Thai fighters' Takedown Defense, Clinch Control, Grapple Defense, and Ground Get Up attributes so they can keep the fight upright, defend submissions, and scramble back to their feet after takedowns. Pile on the special strikes as well to add even more depth to their imposing stand up game—the flying knee and “takedown counter strike” are particularly useful.

SAMBO

- + Great takedowns from the clinch
- + Good submissions
- Weak kicks
- Glass jaw

Sambo fighters are similar to judo artists, able to control the clinch position to great effect and quickly tap out opponents on the mat. Sambo fighters have a bit more talent for submissions, favoring leg and arm locks over chokes, and although they can have faster hands than the judo artist's, their kicking ability is slightly less impressive. Give your sambo warriors a fighting chance by increasing their poor Health ratings. Max out their Clinch Control as well to help them dominate the position, using it primarily to score takedowns. Bolster their Arm and Leg Submission attributes, along with their Passing and Grapple Defense, to make them very dangerous to roll with.

WRESTLING

- + Clinch control and takedowns
- + Ground and pound
- Weak kicks
- Glass jaw

Wrestlers excel at bringing the fight to the floor and keeping it there, seeking to KO their rivals with vicious ground and pound. Wrestlers are also adept at applying chokes—max out their Neck Submission attribute to make them more versatile and dangerous on the mat. Triangles and head arm chokes are excellent submissions for wrestlers, helping them end the fight from side control or off their back. Top off your wrestlers' Takedowns and Clinch Control attributes as well to help them dictate where the fight is fought, and increase their Grapple Defense and Passing ability so they can work confidently on the ground. The wrestler's major drawbacks are found in his lack of Stand Up ability and poor Health attributes—improving his striking is optional, while boosting the wrestler's Blocking, Chin, and Leg Health attributes is vital.

SPECIAL MOVES

Every fighter begins with knowledge of a handful of special moves, but you have the option to bestow many more upon them. The following moves are known to all created fighters from the start:

» Americana

» Heel Hook

» Rear Naked Choke

» Roundhouse Head Kick

» Slip Strikes

When creating a fighter through Fighter Share mode, you're able to give your guys 14 additional special moves. Give these some serious thought and ask yourself a few questions:

What are my fighter's strengths? Select specials that best compliment his fighting style.

What are my fighter's weaknesses? Choose specials that help you keep the fight where you want it by punishing opponents for trying to take you out of your game.

What are my habits as a player? Some special moves are advanced and require expert timing, such as the catch kick and the takedown fake. Shy away from these specials if you're unlikely to make use of them.

NOTE

Created fighters can learn 16 special moves over the course of Career mode, giving Career mode fighters the potential to be a bit more dangerous in the cage. The trade-off is that Fighter Share warriors can be built much faster— their attributes are quickly maxed by spending points, rather than having to guide them through the rigors of Career mode's gyms and training sessions.

Triangle Choke	Submission (Neck)	(1) Full Guard—Bottom; (2) Full Guard Postured Up—Bottom; (3) Full Mount Postured Up—Top; (4) Guard Stacked—Bottom

AMERICANA

Type: Submission (Arm)

Available From:

- » Full Mount Postured Up—Top
- » Full Mount Tight—Top

Failure—Resulting Position:

- » Full Guard Postured Up—Bottom

Americanas (also commonly known as “keylocks”) are basic arm submissions that can be performed from mount even when the opponent is holding you close and not allowing you to posture up. All created fighters begin with this default special move.

ARMBAR

Type: Submission (Arm)

Available From:

- » Full Guard—Bottom
- » Full Guard Postured Up—Bottom
- » Side Control—Top
- » Back Mount Side Turtle—Top

Failure—Resulting Position:

- » Full Guard Postured Up—Bottom

Armbar submissions are dangerous arm submissions that can be applied from many different ground positions. Armbar submissions allow fighters to

threaten from top and bottom, and this versatility makes them must-have moves for submission artists. Armbar submissions also combine with the “submission chaining” special—if you own both moves, you can transition from a failed triangle or omoplata directly into an armbar.

CATCH KICK

Type: Parry

Available From:

- » Standing

This special allows standing fighters to catch their opponents’ kicks and throw

them to the ground. Thrown opponents end up in open guard on the ground, vulnerable to leg kicks and grapplers. Catch kicks to frustrate kickboxers, or as another means of bringing the fight to the mat.

CATCH PUNCH

Type: Parry

Available From:

- » Full Guard Postured Up—Bottom
- » Full Guard Postured Up—Top
- » Full Mount Postured Up—Top

This special allows fighters to grab onto their opponent’s wrists during ground and pound, thus controlling their ability to attack and defend. Catch your opponent’s punches while on top to punch and elbow the bottom man freely—he won’t be able to block until he manages to shake off your grip. Catch punches with the opponent trapped in full guard to hamper his ground and pound and make him easier to sweep and submit. The “catch punch” move takes a bit of practice to incorporate, but it can make you a far more worthy adversary on the ground, especially when battling ground and pounders that have poor submission skills.

CLIMBING ARMBAR

Type: Submission (Arm)

Available From:

- » Muay Thai Clinch—Offensive

Failure—Resulting Position:

- » Full Guard Postured Up—Bottom

The climbing armbar is a unique submission—it's the only one that can be applied from the clinch. This makes the climbing armbar

a must-have for submission buffs—wrap up your opponent in the Muay Thai clinch, then use the climbing armbar to drag him to the ground and into an immediate arm lock. This move combines with the “submission chaining” special—if you own both, you can transition from a failed climbing armbar directly into an omoplata.

DARCE CHOKE

Type: Submission (Neck)

Available From:

- » Sprawl—Top

Failure—Resulting Position:

- » Side Control—Bottom

The Darce choke is a defensive submission that can only be employed after denying a takedown. Stuff your opponents' takedowns at the last second to land in the Sprawl—Top position, then make them pay for their mistake by locking up a Darce. This high-risk move is best used by fighters with good neck submissions—those with lackluster chokes should avoid the Darce because failure moves the opponent into side control.

DASHING TAKEDOWN

Type: Takedown

Available From:

- » Standing

The dashing takedown is a fantastic special that adds speed and power to a fighter's shots. Use this special to shoot in for takedowns

immediately after dashing, greatly increasing your chances of bringing your rival down. Dashing takedowns are must-have specials for ground fighters and can also be useful to strikers, giving them a means of quickly bringing the fight to the floor after they've been rocked.

DIVING PUNCH

Type: Strike

Available From:

- » Standing vs. Open Guard

Fighters that own the diving punch are able to come down upon grounded rivals with force, landing a huge haymaker as they dive into

a downed opponent's guard. Combine this move with the catch kick special so you can follow up with haymakers after catching kicks and tossing rivals to the ground. If you don't use the catch kick, set up diving punches by scoring takedowns and then quickly standing up, ready to strike.

FLYING KNEE

Type: Strike

Available From:

- » Standing

Flying knees are devastating strikes that target the opponent's head. Skilled strikers can use them to quickly close in from range or to punish opponents they've cornered against the fence. All skilled strikers can benefit from this awesome leaping attack.

GOGOPLATA

Type: Submission (Neck)

Available From:

- » Rubber Guard—Bottom

Failure—Resulting Position:

- » Side Control—Bottom

Gogoplatas are unique submissions in which the bottom fighter uses his shin to choke out the man on top. You must have the “major pass” special in order to utilize gogoplatas—the major pass is required to enter the rubber guard position, where gogoplatas are available.

GUILLOTINE TAKEDOWN

Type: Submission (Neck)

Available From:

- » Standing

Failure—Resulting Position:

- » Full Guard—Bottom

The guillotine takedown allows fighters to counter their opponents' takedowns by wrapping them up in a guillotine choke. Submission artists should make good use of guillotines, using them to deny takedowns instead of simply stuffing them. Even if the sub fails, your opponent will be in your full guard, vulnerable to armbars and triangles. Guillotines are the perfect answer to ground and pounders with low grappling defense.

HEAD ARM CHOKE

Type: Submission (Neck)

Available From:

- » Full Mount Tight—Top
- » Side Control—Top

Failure—Resulting Position:

- » Full Guard Postured Up—Bottom

Head arm chokes are dangerous submissions that can be applied from dominant top positions. Fighters with natural neck submission ability, such as wrestlers, should favor head arm chokes over armbars and americanas.

HEEL HOOK

Type: Submission (Leg)

Available From:

- » Full Guard Postured Up—Top
- » Guard Stacked—Top

Failure—Resulting Position:

- » Full Guard Postured Up—Bottom

Heel hooks are basic leg submissions that all created fighters come equipped with. Shoot in for takedowns, stand up, then stack up your downed opponent and slap on a heel hook. Or use the catch kick special to toss opponents to the ground, stacking them up and applying a heel hook afterward. If your fighter is good at leg submissions, look for heel hooks whenever you end up in the opponents' guard.

ATTRIBUTES

FIGHTING STYLES

SPECIAL MOVES

INVERTED KNEEBAR

Type: Submission (Leg)

Available From:

- » Guard Stacked—Bottom

Failure—Resulting Position:

- » Open Guard vs. Standing

The inverted kneebar is an advanced defensive submission that can only be applied when stacked up on the ground. Use inverted kneebars to turn the tables on aggressive ground and pounders, snaring them in unexpected leg locks. The inverted kneebar is the only limb lock that can be applied in this precarious position, making it very useful to submission masters.

JUMP GUARD TAKEDOWN

Type: Takedown

Available From:

- » Muay Thai Clinch—Offensive

The jump guard takedown is a risky maneuver that gives grapplers an effective means of bringing the fight to the ground from the Muay Thai clinch position. If the move is successful, the victim ends up on the ground, tied up in his opponents' full guard. If the move is denied, the instigator ends up on his back, faced with a standing adversary. This move is most useful to submission fighters who excel at neck submissions, as it lands them in position to lock up an immediate triangle from their back. Armbars can also be secured from full guard, but if you're good at armbars, you should really be using the "climbing armbar" special from the Muay Thai clinch instead.

KIMURA

Type: Submission (Arm)

Available From:

- » Half Guard—Top

Failure—Resulting Position:

- » Open Guard vs. Standing

Kimuras are nasty joint locks that attack a fighter's shoulder. These arm submissions can only be applied from the top half

guard position, but this is the default position that fighters land in after scoring most takedowns. All arm submission enthusiasts should know their way around kimuras—you don't even need to pass guard before applying these dangerous subs!

KNEEBAR

Type: Submission (Leg)

Available From:

- » Full Guard—Top

Failure—Resulting Position:

- » Side Control—Bottom

Kneebars are similar to armbars, except that they're used to attack the knee joint instead of the elbow. This move goes well with the diving punch—land a haymaker on your way into your opponents' guard, then slap on a kneebar and end the show. Kneebars are high-risk leg locks that can land you in hot water if you fail them, so only leg submission experts need apply.

MAJOR PASS

Type: Strike

Available From:

- » Many Ground Positions

The major pass is a vital special for all ground fighters. This move can be used instead of regular passes to greatly improve position on the ground, moving a fighter from half guard to mount, for example. The major pass is also required to enter the rubber guard position and utilize omoplats and gogoplatas.

Major passes can give fighters a huge advantage, but beware: these high-risk, high-reward moves can be countered. Simply denying a major pass counters it, causing the instigator to lose valuable position. The following tables detail exactly how the major pass operates, showing where you'll end up after using it from each available ground position.

MAJOR PASS

FROM	RESULTING POSITION	COUNTER RESULTING POSITION
MAJOR PASS—TOP POSITIONS		
Guard Stacked—Top	Side Control—Top	Half Guard—Bottom
Full Guard Postured Up—Top	Side Control—Top	Half Guard—Bottom
Full Guard—Top	Side Control—Top	Side Control—Bottom
Half Guard—Top	Full Mount Tight—Top	Side Control—Bottom
MAJOR PASS—BOTTOM POSITIONS		
Full Guard Postured Up—Bottom	Half Guard—Top	Half Guard—Bottom
Full Guard—Bottom	Rubber Guard—Bottom	Full Guard Postured Up—Bottom
Side Control—Bottom	Full Guard—Bottom	Full Mount - Bottom
Full Mount Tight—Bottom	Full Guard—Top	Full Mount—Bottom

OMOPLATA

Type: Submission (Arm)

Available From:

- » Rubber Guard—Bottom

Failure—Resulting Position:

- » Side Control—Bottom

Omoplatras are advanced high-risk arm submissions that can only be performed if you know the “major pass” special, which is required to reach rubber guard. Omoplatras work with the “submission chaining” special, allowing fighters to transition from a failed omoplata directly into an armbar—provided they know how to perform armbar submissions.

OPEN GUARD TAKEDOWN

Type: Strike

Available From:

- » Open Guard vs. Standing

This unique special allows a downed fighter to trip up his standing adversary, bringing him to the mat and moving swiftly into his guard. Grapplers can benefit greatly from the open guard takedown, as it gives them another means of bringing the fight to the floor. Look for kneebars and heel hooks directly following these sneaky leg trips.

OVERHAND PUNCH

Type: Strike

Available From:

- » Standing

The overhand punch is a favorite among power punchers. These long, looping blows

pack tremendous power, inflicting significant damage even when blocked. Dash forward and throw overhands to help you close in from range. You can also throw overhands after dashing right or left, battering opponents from odd angles. Combine overhands with takedown fakes to keep the opponent guessing and potentially catch him off guard.

REAR NAKED CHOKE

Type: Submission (Neck)

Available From:

- » Back Mount—Top

Failure—Resulting Position:

- » Full Guard—Bottom

All created fighters have the ability to perform rear naked chokes. These fundamental submissions are only available from the back mount position and are usually locked in after a dominated fighter gives up his back by rolling over to avoid strikes when mounted. If your fighter has talent for neck subs, use rear naked chokes to end fights after smashing your adversaries from the mount. Rear naked chokes also combine with the “submission chaining” special, allowing you to transition from a failed choke directly into an armbar—provided you know how to perform that move.

ROUNDHOUSE HEAD KICK

Type: Strike

Available From:

- » Standing

Every created fighter knows how to perform a roundhouse head kick. This special is required to perform head kicks in MMA, so roster fighters who do not know this move (such as Randy Couture) cannot kick their opponents' heads.

ATTRIBUTES

FIGHTING STYLES

SPECIAL MOVES

RUBBER GUARD

Type: Strike

Available From:

- » Full Guard—Bottom

The “major pass” special move is required to advance from full guard to rubber guard—a high-level ground position used by the bottom fighter to control the top opponent. In the rubber guard, the bottom fighter wraps his leg up and behind the top fighter’s head, trapping the top man close and limiting his ability to attack. The advanced omoplata and gogoplata submissions are available from rubber guard.

SLIP STRIKES

Type: Parry

Available From:

- » Standing

All created fighters know how to slip strikes, bobbing and weaving to avoid being hit as they trade blows with rivals. Slip strikes when you wish to plant your feet and remain “in the pocket” against other strikers, dodging their attacks and quickly countering with blows of your own. Slipping and countering effectively makes you a dangerous striker capable of turning out anyone’s lights, but you’re easier to take down while slipping punches and exchanging.

SPINNING BACKFIST

Type: Strike

Available From:

- » Standing

The spinning backfist is a beloved unorthodox strike capable of rocking opponents who don’t see it coming. Sneak spinning backfists into your standing assaults, hoping to catch rivals off guard with speed and damage of the blow. Spinning backfists have a lackluster range, so don’t rely on them to help you close in from afar—use flying knees, overhands, and superman punches to accomplish that goal instead.

SPINNING KICK

Type: Strike

Available From:

- » Standing

Spinning kicks are excellent strikes that add versatility to a fighter’s stand up game. They’re thrown at the opponent’s head by default, but by using the High-Low Modifier trigger, you can also unleash spinning kicks to the body—these have great range and a tremendous impact, and knock a significant amount of stamina from your foe.

SUBMISSION CHAINING

Type: Submission (Varies)

Available From:

- » After a failed Armbar, Omoplata, Rear Naked Choke, or Triangle

Failure—Resulting Position:

- » Varies

The awesome “submission chaining” special grants tap-out experts the ability to transition from one failed submission directly into another, provided they know how to perform each of the subs. Failed triangles and rear naked chokes can be rolled into armbars; failed armbars can be rolled into omoplatas; and failed omoplatas can be rolled back into armbars. By learning the armbar, major pass, omoplata, and “submission chaining” specials, a fighter can transition endlessly between failed armbars and omoplatas!

When one of the aforementioned submissions fails, you’ll have a brief opportunity to use the “submission chaining” special to lock in another. Quickly press the indicated button, which appears near your stamina meter—if the opponent beats you to it, he’ll break free of your submission chain and gain the advantage.

SUPERMAN PUNCH

Type: Strike

Available From:

» Standing

The superman punch is a powerful straight thrown with a fighter's whole body behind it. Use these spectacular blows to close in from range with a quick and powerful punch. Follow takedown fakes with superman punches to catch your opponent off guard.

TAKEDOWN COUNTER STRIKE

Type: Strike

Available From:

» Standing

This fantastic special causes fighters to automatically counter takedowns with

knees to the aggressor's face. Simply deny takedowns quickly to deliver a knee to the opponent's head that staggers him for a brief time, allowing you to follow up with quick strikes or a takedown of your own. All fighters can benefit from this special move, especially when facing mat grapplers. If you keep eating counter knees when shooting in, try for clinch takedowns instead.

TAKEDOWN FAKE

Type: Strike

Available From:

» Standing

The takedown fake is a seemingly unspectacular special, but creative fighters

can use it to great effect. Perform takedown fakes to keep the opponent off guard, helping you set up your offense. Takedown fakes count as dashes, so you can combo other specials off of them, such as overhands and superman punches. Fake the takedown and then land a power shot to rock your rivals and keep them guessing.

TEEP KICK

Type: Strike

Available From:

» Standing

The teep is a frontal push kick aimed at the mid section. It's purpose is primarily defensive; it is used to keep the opponent at bay. Teeps can be used as offensive setups as well, driving the wind from opponents' lungs, draining their stamina, and momentarily stunning them. If your fighter excels at kicking, be sure to implement teeps into your stand up game.

TRIANGLE CHOKE

Type: Submission (Neck)

Available From:

- » Full Guard—Bottom
- » Full Guard Postured Up—Bottom
- » Full Mount Postured Up—Top
- » Guard Stacked—Bottom

Failure—Resulting Position:

- » Side Control—Bottom

Triangles are nasty, high-risk choke submissions in which the bottom fighter uses his legs to choke out the top man. Triangles are

generally applied from the bottom but can also be slapped on from mount when you tire of beating on your victim. Triangles combine with the "submission chaining" special, allowing you to transition from a failed triangle directly into an armbar—provided you know how to perform that move. If your fighter's better at chokes than joint locks, use triangles to tap out enemies instead of armbars and americanas.

FIGHT NIGHT

CAREER MODE

MMA Legends are not born overnight. Only through years of dedication and hard work can one hope to achieve success and glory inside the cage. This chapter covers all aspects of *MMA*'s single-player Career mode to help you guide novice fighters of your creation to the heights of the MMA world.

CREATE A FIGHTER

Legendary MMA icon Bas “El Guapo” Rutten knows potential when he sees it, and he’s more than happy to guide your fighter along his budding career. First things first: You’ve got to create your warrior, and a couple of important decisions must be made during this process.

WEIGHT CLASS

The choice of weight class may seem arbitrary, but it affects many things. Most obviously, your fighter’s weight determines the type of opponents he’ll face during his career—you won’t be fighting Fedor or Couture if your guy’s a Lightweight. More importantly, your fighter’s weight helps shape his starting attributes—Lightweights don’t pack the same power as Heavyweights, but they’re much faster, so their attributes will be higher in some categories and lower in others. Refer to the tables in the previous “Create A Fighter” chapter to view the starting and maximum attribute values for all fighting styles in every weight class.

NOTE

All cosmetic options (head type, hair color, etc.) are purely optional and have no in-game effect.

CREATE A FIGHTER

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

FIGHTING STYLE

The other crucial option to consider is your fighter's style. This is the "base" combat sport your fighter has practiced in his past, so it determines many of your warrior's starting and maximum attribute values. Review attributes and descriptions for each fighting style in the previous "Create A Fighter" chapter of this guide.

NOTE

Regardless of weight class and fighting style, your career fighters always begin with the same five special moves: americana, heel hook, rear naked choke, roundhouse head kick, and slip strikes. Sixteen more special moves can be learned over the course of your career by traveling to visit special trainers. See the previous "Create A Fighter" chapter of this guide for complete details on every special move in MMA.

BAS'S TUTORIALS

Before matching you up with your first career opponent, Bas wants to make sure you've got a firm handle on the basics. Show "El Guapo" you know what's up by completing his easy and informative stand up tutorials.

STAND UP—STAMINA MANAGEMENT

Next, Bas has you test your stand up skills against a training partner. Rock the guy with a long series of right and left hooks to complete the session, and notice how your fighter's stamina drains as you throw so many punches all at once. The lesson here is that in a real fight, you've got to pick your shots to avoid gassing.

STAND UP—BODY SHOTS

Bas's third stand up tutorial asks you to wear down opponents with body shots. Throw the indicated body combinations at the training partner, completing all three combos to end the session. Notice how the training partner's stamina quickly drains as you attack his body—he's sucking wind. Opponents with low stamina are easier to knock out and submit, making body attacks a vital part of the fight game.

TIP

If you'd rather get a jump start on your career, tell Bas you wish to skip all tutorials and proceed to the final amateur fight.

STAND UP—BASIC COMBOS

First, "El Guapo" tests your stand up game by having you throw strike combinations at pads. There's no time limit here and no way you can fail, so simply perform the basic punch and kick combos that Bas calls out, completing all seven to advance.

CREATE A FIGHTER

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

STAND UP—MOVEMENT

The fourth stand up tutorial underscores the fine art of footwork. Imitate the onscreen prompts to make your fighter dash in

every direction, swiftly striking and evading. Dashing is a vital maneuver; it makes you difficult to hit while you quickly move into or out of striking distance. Use dashes to help you set up your offense, slip punches, and quickly escape from countering range.

STAND UP—DEFENSE

Rutten's final stand up tutorial tests your ability to block and parry. First, simply block and defend against the training partner's

barrage of strikes. Block four blows, then parry four more to complete the session. Blocking is easy, but it only reduces damage—parrying causes you to avoid strikes and sets up counters, but this requires timing and practice.

AMATEUR FIGHT 1

Satisfied with your knowledge of the fundamentals, Bas lines you up with your first amateur fight. Feel free to spar before the fight if you feel like getting in a bit of practice beforehand. The amateur fight is very easy—the opponent offers little resistance. Pressure him with fast, simple combos to show off your striking and score the quick KO.

CLINCH—COMBOS

You've proven your stand up game is sharp—now Bas wants to gauge your clinch ability. Initiate a clinch against the

sparring partner, then perform the basic clinch strike combos that Bas outlines for you. Break away after completing the first combo, then tie up again and perform a second combo to complete the exercise.

CLINCH—CAGE CONTROL

Next, show Bas that you know how to use the cage to your advantage in the clinch. Tie up with the opponent and shove him

against the cage, then switch to a double underhook clinch and score a takedown. Opponents are easier to control when pressed up against the cage, and takedowns are much easier to accomplish here, so make good use of this dominant clinch position.

AMATEUR FIGHT 2

Bas has already lined up another amateur fight for you, and he wants to see you work the clinch in this one. Again, feel free to spar for

as long as you like before accepting the fight. This is another easy contest—back the opponent up with strikes, then use the clinch to control him against the cage, working him over with knees and elbows until he drops to the floor.

TIP

Be methodical with strikes in the clinch to maintain control.

CREATE A FIGHTER

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

GROUND—BASIC COMBOS

Bas is impressed—all that remains to be seen is your ground game. In the first tutorial, shoot in for a takedown to bring the opponent to the mat. Once there, simply perform the basic ground strike combos to work the opponent over from half guard, thereby completing the exercise. Ground strikes are an important way of scoring points with the judges and opening up passing opportunities.

GROUND—MOVING TO MOUNT

Bring the action to the mat in the second ground tutorial, then use strikes to set up your passes. Pass to full mount and posture up to rain down fists on your training partner. Complete the ground strike combos from full mount to complete the test.

GROUND—CONTROL

In the third ground tutorial, lock up into the double underhook clinch position, then slam your training partner to the mat with a huge takedown. Pass to mount and then simply deny your partner's attempt at improving position to complete the exercise. The more tactful you are with your ground and pound, the better you'll be at maintaining control.

GROUND—SUBMISSION DEFENSE

You're mounted by your training partner at the start of this short test and must deny one submission attempt by him to advance. Hit the button the moment your controller begins to vibrate to deny the sub attempt and complete the challenge.

GROUND—LIMB SUBMISSIONS

Now for the fun stuff. Bas wants to see you finish a limb submission—press the Submission button to lock in an americana and then finish the sub by methodically tapping the Submission button to tighten the hold. Don't button mash while applying limb locks—this will burn out your stamina before the submission can be fully applied. Tap the button in short bursts to manage your stamina as you work at securing the sub.

NOTE

The camera zooms in as submissions become tighter and zooms out as the defender slips free.

GROUND—CHOKE SUBMISSIONS

Next, Bas wants you to lock in a choke hold. Can do! Press the Submission button to initiate a rear naked choke, then rotate the left stick to "find the zone" when the submission circle appears. Your controller vibrates whenever you find the invisible, moving "zone," and the zone briefly appears—try to follow it by continuing to rotate the thumbstick, squeezing tighter and tighter each time you find the zone until you force the tap.

CREATE A FIGHTER

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

TIP

Don't rotate the thumbstick too quickly—move it around slowly to conserve stamina, releasing to recover stamina as needed.

FINAL AMATEUR FIGHT

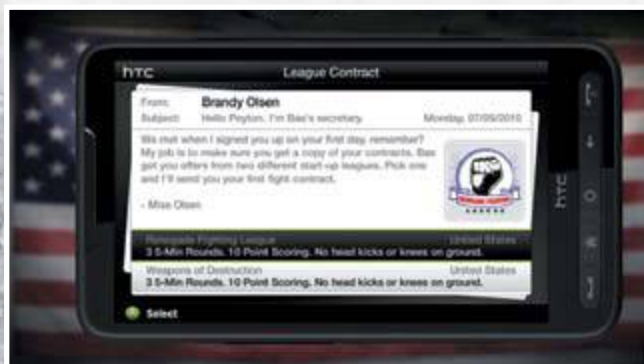

Bas is impressed with your grappling skill and has booked your third and final amateur fight. Put everything you've learned to practice in this bout, picking your opponent apart with standing strikes, smashing him against the cage in the clinch, and pounding him out or submitting him on the mat. Fight your fight and finish him however you like to convince Bas that you've got what it takes to become a champion.

LEAGUE CONTRACTS

Now that you've shown Bas that you're no stranger to the cage, "El Guapo" is finally ready to take you under his wing. Bas's sole desire is to steer your career toward fame and glory, and he'll regularly contact you in person, over the phone, and via email to keep in touch as the two of you manage your fighter's career.

Bas's secretary, Brandy Olsen, soon sends you your first league contract. Choose to fight in either "Weapons of Destruction" or the "Renegade Fighting League." Both organizations feature the exact same rules and regulations, so the choice is completely arbitrary—pick whichever name or logo you like best.

NOTE

There may be other points later in your career where you'll have a choice between joining one of two different fighting leagues. The primary difference between the leagues are their bout rules—examine these carefully when there's a discrepancy and pick the league whose rules seem most appealing to you.

After choosing your fighting league, Brandy sends you your first fight contract. Bas is a hands-on manager and always picks

your opponents for you, so simply review the contract to see who you're up against.

TIP

Examine your opponents' strengths and weaknesses by checking their attributes while viewing fight contracts. Look for holes in their game and develop your strategy accordingly.

HITTING THE GYM

Bas knows that spending time in the gym is crucial to improving your skills, and he insists that you go through eight weeks of intense training after you accept each fight. This is your time to grow and improve—the harder you work at building your fighter's skills in the gym, the better things will go on fight night!

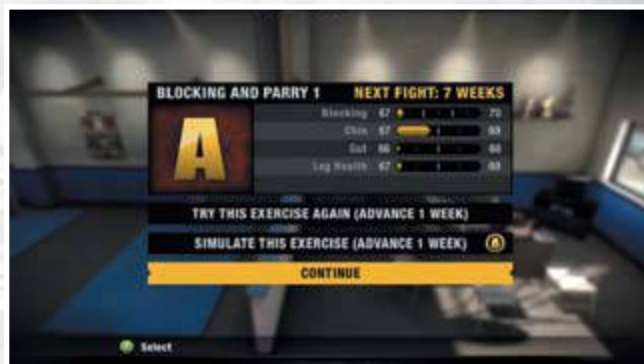

WORK SMART—FIGHT HARD

When scrolling through all of those exercises, examine their improvement charts carefully—they can be a little deceptive. The listed attributes are the ones you'll improve by training in the exercise—the green coloring next to them shows your estimated improvement after a good workout session. Attribute points are gained each time you fill a meter beyond one of its white lines, and some meters have more lines than others, meaning you'll gain several attribute points by the time you completely fill the meter.

TIP

Weigh your options carefully before training. View your fighter's attributes, consider his strengths and weaknesses, and look for areas that are most in need of improvement. Have an idea of the type of warrior you want to develop by the end of the career and work toward that goal by drilling the proper exercises.

Keep in mind that the green coloring is just an estimate—it's possible to achieve even greater improvement if you manage to ace the workout. You're given a letter grade following every exercise: "D" means you did poorly, while "A" means you excelled. Achieve "A" ratings to receive the most gain from each exercise and boost your fighters skills as quickly as possible. Earning "A" ratings can also lead to advanced exercises.

SIMULATING WORKOUTS

Simulating exercises allows you to boost your fighter's attributes without having to undergo the same workout over and over. Once you've earned an "A"

grade, feel free to simulate the exercise as many times as you like to instantly gain top benefits. Your highest letter grade in each workout is always displayed next to their names as you scroll through them.

SPECIAL TRAINERS

Rutten's gym is stocked with everything you need to improve your fighter's fundamental attributes, but to truly become a legend, you'll

need to travel and train with other specialists. Fortunately, "El Guapo" has amazing connections and will soon have you visiting gyms around the world after you breeze through your first two professional bouts. Keep racking up wins to unlock more special trainers, and make sure to visit these valuable masters as often as your fight earnings allow.

Special trainers offer advanced training exercises that can hone your fighter's strengths or shape him into a more well-rounded combatant. Use the following table to determine which trainers offer the best exercises for you.

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

SPECIAL MOVES

moves, as listed below. See the previous “Create A Fighter” chapter for complete details on all special moves.

Special Trainers—First Group

International Jiu Jitsu: Armbar, catch punch, submission chaining, triangle choke

Miletich Fighting Systems: Dashing takedown, diving punch, spinning kick, takedown fake

Xtreme Couture: Darce choke, head arm choke, major pass

Special trainers can also teach your fighter new special moves, which make your warrior far more dangerous. Each trainer offers a variety of special

Special Trainers—Second Group

Ballistic Boxing: Catch kick, guillotine takedown, overhand punch, takedown counter strike

Bushido Club: Climbing armbar, inverted kneebar, kimura

Eight Venoms: Flying knee, spinning backfist, superman punch, teep kick

Inferno International Gym: Gogoplata, jump guard takedown, omoplata, open guard takedown

NOTE

Your fighter can only learn 16 special moves over the course of his career, so choose wisely. Refer to the previous “Create A Fighter” chapter for complete details on special moves, including tips for choosing moves that best compliment your fighting style. Don’t worry about failing special move challenges, either—you can retry them as many times as it takes to learn the move.

TRAINING EXERCISES

Most training exercises are simple and straightforward, but some are quite challenging. Here we provide tips to help you ace every workout. See the previous “Special Trainers” table to learn where each exercise can be attempted.

NOTE

The higher your fighter’s attributes, the easier it’ll be for him to achieve “A” ratings. If you’re having trouble beating a certain exercise, just keep working at it. Your fighter’s attributes will steadily increase, even when low ratings are achieved, and you’ll eventually make the grade.

STAND UP EXERCISES

Blocking and Parry 1

Major Benefit: Chin

Minor Benefits: Blocking, Gut, Leg Health

Simply maintain a defensive blocking posture throughout this exercise, allowing your training partner to whale away at you with strikes.

The exercise completes with an “A” after you block 10 blows.

Blocking and Parry 2

Major Benefits: Gut, Blocking

Minor Benefits: Chin, Leg Health

Parry 10 strikes in 30 seconds to ace this drill. Your sparring partner will throw rights and lefts, often throwing two strikes per side—just keep

parrying right and left until you’ve slapped away 10 punches and kicks.

Blocking and Parry 3

Major Benefits: Leg Health, Blocking

Minor Benefits: Chin, Gut

You cannot dash or attack during this 30-second exercise, yet you must not allow the aggressive sparring partner knock you out.

Hold the block button as you circle away from your sparring partner’s back (power) hand. Keep your distance, and if your partner ever corners you, slip and parry his strikes as you look for an escape.

Blocking and Parry 4

Major Benefit: Blocking

Minor Benefits: Chin, Gut, Leg Health

Without fighting back, survive for a full minute against an aggressive sparring partner to complete this exercise. Block constantly as you move and dash

away from your opponent, circling around his lead (weak) hand. Parry and slip strikes whenever your partner corners you, bobbing and weaving to avoid damage as you search for a way to create distance again.

Boxing Combo 1

Major Benefit: Punch Combo Speed

Minor Benefits: Punch Range, Stand Up Left Hand Power, Stand Up Right Hand Power, Hand Speed

Perform a simple series of punch combinations against a heavy bag to complete this exercise.

The combos are of the basic jab-hook variety and there's plenty of time, so the challenge here is minimal. Complete all six of the following combos to earn an "A" grade:

Combo 1: Left jab.

Combo 2: Left jab, left jab.

Combo 3: Left jab, right straight.

Combo 4: Left jab, right straight, left jab, right straight.

Combo 5: Left jab, right straight, left hook.

Combo 6: Left jab, right straight, left hook, right hook.

Boxing Combo 2

Major Benefit: Hand Speed

Minor Benefits: Stand Up Left Hand Power, Stand Up Right Hand Power, Punch Combo Speed, Punch Range

Body shots are the focus of this boxing exercise—throw hands at the heavy bag, completing all of the following combos in under 30 seconds:

Combo 1: Left body hook.

Combo 2: Left body hook, right body hook.

Combo 3: Right body straight, left body hook, right body hook.

Combo 4: Left body jab, right body hook, left body uppercut, right body hook.

Combo 5: Left body jab, left body jab, right body uppercut, left body hook, right body straight.

Combo 6: Left body jab, right body straight, left body hook, right body hook, left body uppercut.

Boxing Combo 3

Major Benefits: Stand Up Left Hand Power

Minor Benefits: Hand Speed, Punch Combo Speed, Stand Up Right Hand Power, Punch Range

Complete a series of seven punch combinations within 20 seconds to complete this challenge. The combos are short, but so is your time, so

you can't afford to make mistakes. Here are the combos you must throw:

Combo 1: Left jab, right straight.

Combo 2: Left jab, left jab, right hook.

Combo 3: Left jab, right straight, left hook.

Combo 4: Right straight, left hook, right uppercut.

Combo 5: Left jab, left jab, right straight.

Combo 6: Right body straight, left body hook, right body hook.

Combo 7: Right body straight, left body hook, right body hook, left body hook.

Boxing Combo 4

Major Benefits: Stand Up Right Hand Power

Minor Benefits: Stand Up Left Hand Power, Hand Speed, Punch Combo Speed, Punch Range

Land four three-strike combos in 30 seconds to complete this relatively simple boxing exercise. Any strikes will do, but you've got to land them

in quick succession or you'll be forced to start over. Speed is key—throw a flurry of jabs and straights at your partner's jaw, stringing together combos of quick punches to complete the lesson before the bell.

Movement and Range 1

Major Benefit: None

Minor Benefits: Movement Speed, Stamina Recovery, Punch Range, Kick Range

Simply dash in each indicated direction before time expires to complete this easy exercise. (Flick the thumbstick in a direction to dash.)

Movement and Range 2

Major Benefits: Movement Speed, Kick Range

Minor Benefits: Punch Range, Stamina Recovery

Land any three unblocked strikes and then dash away from the opponent—do this four times to complete this simple exercise.

Wade in with fast jabs and straights, dashing backward the moment you've landed three unblocked blows.

Movement and Range 3

Major Benefits: Movement Speed, Punch Range

Minor Benefits: Kick Range, Stamina Recovery

Avoid being knocked out by an aggressive sparring partner in this exercise, but beware: You can't attack or block. Defend yourself by dashing away from your partner—first dash backward, then dash either right or left, whichever leads you away from your partner's back hand. Continue to dash backward and around your opponent. Survive for 45 seconds to ace the training.

Movement and Range 4

Major Benefit: Movement Speed

Minor Benefits: Punch Range, Kick Range, Stamina Recovery

You have 50 seconds to knock down an intermediate sparring partner in this final Movement and Range lesson, and the faster you do so, the better your grade will be. You can't block or parry, and your sparring partner is very aggressive—dash to sidestep his strikes, using footwork to create angles as you wing shots at his chin.

Kick Boxing Combo 1

Major Benefit: Kick Combo Speed

Minor Benefits: Kick Range, Stand Up Left Foot Power, Stand Up Right Foot Power, Foot Speed

Sling combos of fists and feet at your trainer's Muay Thai pads in this exercise. The combos are a little tricky until you gain a grasp of the game's

kicking dynamic. Here are the combos you must perform:

Combo 1: Left jab, right head kick.

Combo 2: Right hook, left head kick.

Combo 3: Left jab, right jab, left leg kick.

Combo 4: Right straight, left hook, right head kick.

Combo 5: Left head kick, right straight, left jab.

Combo 6: Right leg kick, left jab, right hook, left head kick.

Kick Boxing Combo 2

Major Benefit: Foot Speed

Minor Benefits: Stand Up Left Foot Power, Stand Up Right Foot Power, Kick Combo Speed, Kick Range

Complete a series of five punch and kick combos against a sparring partner in this exercise. The partner will occasionally

move, making things a little more challenging. You have 30 seconds to land all of the following combos:

Combo 1: Right straight, left hook, right body kick.

Combo 2: Left jab, left jab, right leg kick.

Combo 3: Left jab, right hook, left hook, right body kick.

Combo 4: Left jab, right straight, left hook, right body kick.

Combo 5: Left leg kick, left leg kick, right hook, left body kick.

Kick Boxing Combo 3

Major Benefits: Stand Up Left Foot Power

Minor Benefits: Foot Speed, Kick Combo Speed, Stand Up Right Foot Power, Kick Range.

Unleash a number of advanced kickboxing combos against your trainer's pads in this lesson. You have 45 seconds to bang out the following tricky combos:

Combo 1: Left jab, right straight, left body kick.

Combo 2: Right straight, left hook, right head kick.

Combo 3: Left body jab, right body kick, left jab, right hook.

Combo 4: Right straight, left hook, right hook, left body kick.

Combo 5: Right leg kick, left jab, right straight, left body kick.

Combo 6: Left jab, left jab, right straight, left hook, right head kick.

Kick Boxing Combo 4

Major Benefits: Stand Up Right Foot Power

Minor Benefits: Stand Up Left Foot Power, Foot Speed, Kick Range, Kick Combo Speed

Land five challenging combos against a mobile sparring partner to clear this final Kick Boxing Combo challenge. Your partner will move

and strike you back, making things quite difficult. Back him into a corner with a flurry of rapid punches, then focus on completing all of the following combos within 70 seconds:

Combo 1: Right leg kick, right leg kick, left jab, right straight.

Combo 2: Left jab, left jab, right hook, left body kick.

Combo 3: Left jab, right straight, left hook, right body kick.

Combo 4: Right leg kick, left hook, right body hook, left body kick.

Combo 5: Left jab, right body straight, left hook, right head kick.

Takedown Defense 1

Major Benefit: Ground Get Up

Minor Benefits: Takedown Defense, Stamina Recovery, Takedowns

Remain ready to sprawl at all times during this easy exercise, and simply focus on denying your training partner's takedown attempts. If he

ever manages to drag you down, immediately shove him away and return to your feet so you may continue to stuff more takedowns. Stuff five shots to complete the exercise with an "A" grade.

Takedown Defense 2

Major Benefits: Ground Get Up, Takedown Defense

Minor Benefits: Takedowns, Stamina Recovery

Your partner takes you down at the start of this lesson, landing in your half guard. Shrug him off and get back to your feet immediately to

complete the challenge. The faster you return to your feet, the better your grade—try reclaiming full guard and even sweeping your partner if you can't seem to stand up from half guard.

Takedown Defense 3

Major Benefit: Takedown Defense

Minor Benefits: Ground Get Up, Stamina Recovery, Takedowns

You must remain on your feet for a full minute to beat this challenge. Your sparring partner doesn't strike at you, so simply stand before

him, ready to sprawl against his takedowns and deny his clinch attempts. Strive to stuff his takedowns immediately; if you're a little slow, you may stuff the shot but end up in the sprawl position with your partner trapped beneath you—although this is a dominant position, you are no longer standing on your feet and have therefore failed the exercise!

CREATE A FIGHTER

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

Takedown Defense 4

Major Benefit: Takedown Defense

Minor Benefits: Ground Get Up, Stamina Recovery, Takedowns

Your training partner scoops and slams you to the ground at the start of this exercise—you end up trapping him in half guard. Deny

his passes as you work to recover full guard, then shove him away and rise back up to your feet. You have plenty of time to work, but the faster you reach your feet, the better your grade.

CLINCH EXERCISES

Clinch Combo 1

Major Benefits: Clinch Combo, Clinch Striking Power

Minor Benefits: Clinch Striking Power, Clinch Strike Speed, Stamina Recovery

Tie up with your training partner and complete the clinch strike combos before breaking away again. Just keep clinching and striking until you complete all five combos.

Combo 1: Clinch, right punch, right punch, break.

Combo 2: Clinch, left elbow, left elbow, break.

Combo 3: Clinch, right punch, right punch, left elbow, break.

Combo 4: Clinch, right elbow, right elbow, left elbow, break.

Combo 5: Left jab, right straight, clinch, left punch, left elbow, break.

Clinch Combo 2

Major Benefits: Clinch Strike Speed, Clinch Striking Power

Minor Benefits: Stamina Recovery, Clinch Combo

Rattle off a series of five kickboxing and clinch strike combos against an active sparring partner in this exercise. You have a full

minute to complete the following advanced combos, so take your time and don't stress over a few mistakes:

Combo 1: Left jab, left jab, clinch, right punch, right punch, break.

Combo 2: Right leg kick, left body hook, clinch, right punch, right punch, right elbow, break.

Combo 3: Right body kick, left jab, clinch, left elbow, left jab, right elbow, break.

Combo 4: Left jab, right straight, right hook, clinch, left elbow, left elbow, right punch, break.

Combo 5: Left jab, right body straight, left body hook, clinch, right punch, right elbow, right punch, break.

Clinch Combo 3

Major Benefits: Clinch Striking Power, Clinch Strike Speed, Clinch Combo

Minor Benefits: Stamina Recovery

Clinch and smash your training partner with various strike combos to clear this lesson. You have 45 seconds to work, but avoid

making too many errors. The combos you must complete are as follows:

Combo 1: Clinch, right punch, right punch, break.

Combo 2: Clinch, right elbow, right elbow, left elbow, break.

Combo 3: Left jab, left jab, clinch, right punch, right punch, break.

Combo 4: Right body kick, left jab, clinch, left elbow, left punch, right elbow, break.

Combo 5: Left jab, right body straight, left body hook, clinch, right punch, right elbow, right punch, break.

Clinch Combo 4

Major Benefit: Clinch Striking Power

Minor Benefits: Clinch Strike Speed, Clinch Combo, Stamina Recovery

Execute five clinch strike combos against an intermediate sparring partner to complete this exercise. You have 70 seconds to

land five three-hit combos, and any clinch strikes will do the trick. Throw strikes to set up your clinches, landing three fast strikes after tying up. Break away after landing three strikes to complete the combo, then tie up again and land some more. Shove away from your training partner if he initiates a clinch—you must be the instigator for your strikes to tally.

Clinch Control 1

Major Benefit: Clinch Control

Minor Benefits: Clinch Control, Stamina Recovery

Practice your mastery over clinch control in this easy exercise. First enter the Muay Thai clinch against the training partner, then break away, then enter the double underhook clinch. Repeat this sequence to complete the lesson.

Clinch Control 2

Major Benefit: Clinch Control

Minor Benefits: Stamina Recovery

You must deny five of your training partner's clinch attempts to clear this exercise, and you fail instantly if he manages to tie you up even once. Your partner will throw strikes at you as well—but he can't knock you out or rock you, so simply let him tee off and don't bother blocking. Remain ready to stuff his clinch attempts when they eventually come.

Clinch Control 3

Major Benefit: Clinch Control

Minor Benefits: Stamina Recovery

Hurl a flurry of fast strikes at your sparring partner, backing him up toward the cage before tying up in the Muay Thai clinch. Muscle him against the cage and deny his escapes as you switch to the double underhook clinch. Slam your partner to the mat with a huge double underhook takedown to at last complete the lesson. The most challenging part of all of this is getting into the clinch and maintaining position—you need excellent clinch control to succeed, so keep practicing to strengthen your ability. Make sure you're the one to initiate the clinch as well—your rival cannot be the one to instigate it.

GROUND EXERCISES

Grappling 1

Major Benefit: Grapple Defense

Minor Benefits: Passing, Stamina Recovery

This exercise starts you off in your training partner's guard and asks you to pass to full mount. Your partner offers little resistance, so just keep passing until you reach the full mount position.

Grappling 2

Major Benefits: Grapple Defense, Passing

Minor Benefit: Stamina Recovery

You begin this exercise in full mount and must simply deny your sparring partner's attempts at improving position. Don't strike or block; simply remain ready to stuff your partner's moves the moment your controller begins to shake.

Grappling 3

Major Benefit: Passing

Minor Benefits: Grapple Defense, Stamina Recovery

Sweep your training partner the moment this exercise begins, then start working your way to full mount. Throw a few strikes to set up your passes, battering your partner's ribs to erode his stamina and make passing easier. Reach full mount within 90 seconds to complete the lesson—the faster you get there, the better your grade.

CREATE A FIGHTER

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

Grappling 4

Major Benefits: Passing

Minor Benefits: Grapple Defense, Stamina Recovery

to keep top position by denying his sweep attempts. Keep your partner planted on his back for the whole minute to earn an "A."

Beat this lesson by surviving for one full minute without allowing your training partner to mount you. You begin in your partner's guard—strive

Ground Combos 1

Major Benefit: Ground Combo Speed

Minor Benefits: Ground Striking Power, Ground Strike Speed, Stamina Recovery

passing until you reach the full mount position. If you're having trouble passing, pause to recover stamina and then throw a series of strikes to distract the opponent before making another attempt.

From your training partner's guard, use strikes to help you pass to mount. Your partner offers little resistance, so just keep

Ground Combos 2

Major Benefits: Ground Striking Speed, Ground Striking Power

Minor Benefits: Ground Combo Speed, Stamina Recovery

strikes to distract him before attempting each pass, targeting his body to drain his stamina and make passing easier. Beware his attempts to reclaim guard and be swift at denying him—this will wear him out as well.

This exercise is similar to Ground Combos 1, except that this sparring partner is far more resistant to your passes. Use plenty of

Ground Combos 3

Major Benefits: Ground Striking Power, Ground Strike Speed

Minor Benefits: Ground Combo Speed, Stamina Recovery

You begin this lesson in the sprawl position and must pass around your partner, taking his side and then his back. The faster you manage to sink in your hooks, the better your grade will be. Deny your partner's escape attempts as you pass around, taking his back quickly to secure the "A" grade.

You begin this lesson in the sprawl position and must pass around your partner, taking his side and then his back.

The faster you

Ground Combos 4

Major Benefit: Ground Striking Power

Minor Benefits: Ground Strike Speed, Ground Combo Speed, Stamina Recovery

then mounting him. You have two full minutes to work, but the faster you manage to reach mount, the better your score will be. Your opponent isn't too difficult to sweep, but the better your fighter's passing ability, the easier time he'll have at clearing this final Ground Combos lesson.

Your partner has you mounted at the start of this exercise, and you must turn the tables by recovering guard, sweeping, and

Takedowns 1

Major Benefit: None

Minor Benefits: Takedowns, Stamina Recovery, Takedown Defense

successful takedown and get ready to set up your next shot.

Shoot in on your easy training partner and plant him on the mat nine times to ace this exercise. Time is against you, so stand up after each

CREATE A FIGHTER

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

Takedowns 2

Major Benefit: Takedowns

Minor Benefits: Stamina Recovery, Takedown Defense

Score nine takedowns on an intermediate sparring partner without being taken down yourself to beat this lesson. Be the aggressor and drive your partner to the mat, then immediately stand up so you can do it again. Shoot in the moment your partner rises to plant him on his back again and again, keeping a rhythm going and giving your partner very little chance at stopping you or taking you down.

Takedowns 3

Major Benefit: Takedowns

Minor Benefits: Stamina Recovery, Takedown Defense

This challenge is similar to Takedowns 2, except that the sparring partner is far more aggressive with his shots. Stuff his initial takedown and then shoot in to score your own. Quickly stand back up and then hit another takedown the moment your partner begins to rise. Keep this pattern going until you land nine takedowns.

Takedowns 4

Major Benefit: Takedowns

Minor Benefits: Stamina Recovery, Takedown Defense

This difficult challenge is similar to its predecessors, except that your expert sparring partner is very skilled at sprawling against your shots and taking you down. Shoot in for a takedown the moment he strikes, then stand back up and immediately dash away—your partner has the “open guard takedown” special and can trip you up with his feet from his back, bringing you to the mat and causing you to fail! Make sure to dash away after standing up from each takedown.

SUBMISSION EXERCISES

NOTE

Submission exercises can be very challenging to beat when you have little skill. Keep drilling them to build your submission ability, making these challenges easier.

Arm Submissions 1

Major Benefit: None

Minor Benefits: Arm Submissions, Grapple Defense, Stamina Recovery

Lock in an americana the moment this easy exercise begins and apply bursts of pressure to force your novice training partner to tap.

Arm Submissions 2

Major Benefit: Arm Submissions

Minor Benefits: Grapple Defense, Stamina Recovery

This lesson is similar to Arm Submissions 1, except that the opponent is far more difficult to submit. Use an americana and be sure to maximize your stamina by pressing the Submission button in short, regular bursts. The greater your fighter's arm submission skill, the easier it will be to finish the hold.

Arm Submissions 3

Major Benefit: Arm Submissions

Minor Benefits: Grapple Defense, Stamina Recovery

This final Arm Submission lesson is by far the most challenging—only those with great skill at arm subs will walk away with an “A.” Lock in that americana and use

short bursts of pressure to tighten the hold, looking to secure the tap. Expect a great struggle by your training partner—if you can tap this guy out, you can tap out anyone.

CREATE A FIGHTER

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

Choke Submissions 1

Major Benefit: None

Minor Benefits: Neck Submissions, Grapple Defense, Stamina Recovery

Finish your novice training partner with a rear naked choke (or any other choke) in this exercise. After initiating the choke,

slowly rotate the left thumbstick to find the invisible “zone”—your controller rattles when you hit it. Stick with the zone once you find it to squeeze tighter and tighter until the choke is fully applied.

Choke Submissions 2

Major Benefit: Neck Submissions

Minor Benefits: Grapple Defense, Stamina Recovery

Tap an intermediate training partner with a rear naked choke to clear this lesson. Strive to find the elusive “zone” and stick

with it when your controller begins to vibrate. Remember not to rotate the thumbstick too quickly and to release it to recoup stamina. The better your fighter is at applying neck submissions, the easier this challenge will be.

Choke Submissions 3

Major Benefit: Neck Submissions

Minor Benefits: Grapple Defense, Stamina Recovery

The final Choke Submission challenge is most difficult—expect to struggle greatly against your seasoned training partner.

Only those with a high neck submission score will be able to secure the choke against this worthy foe. Slip into a rear naked choke at the start of the challenge and strive to find that elusive “zone.” Keep practicing to improve your skill until you’re finally able to secure the tap.

Leg Submissions 1

Major Benefit: Leg Submissions

Minor Benefits: Grapple Defense, Stamina Recovery

Finish a heel hook (or any other leg submission) on your novice training partner to ace this easy exercise. Simply initiate the heel

hook from your starting position and apply pressure in bursts of button presses until you force the tap.

Leg Submissions 2

Major Benefit: Leg Submissions

Minor Benefits: Grapple Defense, Stamina Recovery

Tap an intermediate training partner with a heel hook to clear this lesson. Apply the submission at the start of the exercise and use

short bursts of pressure to conserve stamina while securing the hold. The higher your fighter’s talent for leg submissions, the easier this challenge will be.

Leg Submissions 3

Major Benefit: Leg Submissions

Minor Benefits: Grapple Defense, Stamina Recovery

Grab hold of your expert partner’s leg and battle to tap him out with a heel hook in this final Leg Submission challenge. You must have exceptional leg sub skill to force the tap against your seasoned partner—practice to build your ability. If you can finish this guy with a leg lock, you can finish anyone.

CREATE A FIGHTER

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

Submission Defense 1

Major Benefit: None

Minor Benefits: Stamina Recovery, Arm Submissions, Leg Submissions, Neck Submissions

Your sparring partner has you mounted—survive against his onslaught of submission attempts until time expires.

You fail if you're ever caught up in a submission battle, so don't bother blocking those strikes—focus solely on denying each submission attempt until you hear the bell.

Submission Defense 2

Major Benefit: Grapple Defense

Minor Benefits: Stamina Recovery, Arm Submissions, Leg Submissions, Neck Submissions

Defend against an even more skilled submission artist's holds in this exercise.

Focus on denying his submission attempts, but also try to recover guard and sweep to nullify his submission options.

Submission Defense 3

Major Benefit: Grapple Defense

Minor Benefits: Stamina Recovery, Arm Submissions, Leg Submissions, Neck Submissions

This exercise is similar to the last—simply deny your partner's onslaught of submission attempts to achieve an "A" grade. Again, try to improve your position when the opportunity allows to potentially negate your partner's subs.

Submission Defense 4

Major Benefit: Grapple Defense

Minor Benefits: Stamina Recovery, Arm Submissions, Leg Submissions, Neck Submissions

Your training partner is an elite grappler in this final lesson, but your tactics remain the same: Simply strive to deny all submission attempts and complete the exercise with an "A" grade.

FIGHT NIGHT

FIGHT YOUR FIGHT

The time has finally come. You've put in the hard work—now you get to show the world what you're capable of. Keep the following tips in mind to increase your odds of getting your hand raised on fight night.

Your knowledge of your opponent's strengths and weaknesses is the best thing you've got going for you in each fight. Study your

rival's attributes while viewing the fight contract, looking for his highest and lowest scores. Perhaps he's got weak legs, or a glass jaw? Or maybe he lacks grappling defense, which makes him susceptible to submissions. Think of the best places to bring the fight against your opponents—and be aware of dangerous areas you should avoid.

CREATE A FIGHTER

BAS'S TUTORIALS

LEAGUE CONTRACTS

HITTING THE GYM

TRAINING EXERCISES

FIGHT NIGHT

CONSERVE YOUR STAMINA

Play it cool once the cage doors seal—you've got all night to finish the bum in front of you. Running out of stamina makes everything

more difficult, both offense and defense, so it's something you must avoid. Use footwork and feints to pressure your opponent without expending much stamina. Get him to open up with strikes, then capitalize with counter shots or a fast takedown—whichever your fighter would prefer.

Don't overcommit when striking, and remain tactical and methodical when battling in the clinch and on the ground.

Try to keep your opponent working in each position, but keep an eye on your own stamina and look for short breaks in the action where your fighter can catch a few breaths.

CONTROL AND CONQUER

Fighting is intense, but do your best to consider your surroundings as you mix things up on the feet. Use the cage to your advantage

by keeping near the center, then applying slow but steady pressure to carefully back your opponent up and pinning him against the cage to limit his mobility and gain the advantage in the clinch.

Keep your surroundings in mind when retreating as well. Avoid backing directly away from your opponent—circle away instead, moving backward and then away from your opponent's back (power) hand.

NEVER QUIT

Anything can happen in a fight—your very first punch might be sharply countered, rocking you and putting you in deep water right

from the get-go. Never give up and always struggle to survive in these situations—it doesn't take long for your fighter to recover, and you might end up rocking your opponent just as easily.

Clinch or shoot for a takedown when you get rocked, closing the distance and controlling position for a moment

until your head clears. Relax and focus when caught in submissions, working methodically to defend and slip free of holds. As long as you have enough stamina, it's often possible to escape from desperate situations and gain a chance to fight back and turn the tables on your opponent.

FIGHT RESULTS

Statistical feedback is displayed following each fight, along with the judge's scorecards (regardless of whether they were needed to determine the outcome). Use this data to help you fine-tune your game. For example, if your fighter seems to tire rapidly and you always seem to throw a high number of strikes during fights, you're probably being a little too busy. Try slowing down and picking your shots with more care, using footwork instead of simply winging combos.

CREATING ONLINE FIGHTERS

SHARING FIGHTERS

ONLINE STRATEGIES

BELT RANK

ONLINE ACTION

To truly count yourself among *MMA*'s elite, you've got to challenge your skills against other players. Fortunately, *MMA* features a dedicated online community full of fight fans, all ready to mix things up with their favorite created warriors.

Before you dive into the frenzy of online *MMA*, you'll either need to create a fighter, import one of your Career mode fighters, or download a fighter that another player has created and uploaded via Fighter Share.

CREATING ONLINE FIGHTERS

Eager to test your skills online, but not interested in working to max out a Career fighter's attributes? No sweat—just go to Fighter Share and choose the “Create A Fighter” option. Here you can build your ideal online warrior simply by choosing his fighting style and weight, then distributing points to his various attributes. Give some thought to the type of fighter you want to build and modify his attributes accordingly.

NOTE

A fighter's starting, minimum, and maximum attribute values are determined by his fighting style (boxing, wrestling, etc.) and his weight class (Heavyweight, Middleweight, etc.). Set these options before fiddling with a fighter's attribute scores, and see the previous “Create A Fighter” chapter of this guide for complete attribute tables for all fighting styles in every weight class.

CREATING ONLINE FIGHTERS

ONLINE STRATEGIES

SHARING FIGHTERS

BELT RANK

TIP

Take points away from less-attractive attributes to boost more worthy attributes even higher!

When building a warrior in Fighter Share, you're permitted to give him 14 specials in addition to his starting five (heel hook, americana, rear naked choke, roundhouse head kick, and "slip strikes.") Think carefully about the type of fighter you're building and select specials that best compliment his strengths and balance out weaknesses.

TIP

See the previous "Create A Fighter" chapter of this guide for descriptions and insights into every fighting style and special move.

NOTE

Career fighters can learn 16 special moves during their career in addition to the starting five specials that all created fighters begin with. This gives Career fighters the potential to be slightly more competitive than warriors created in Fighter Share, who can only be given 14 additional specials. Max out a Career fighter's attributes and specials to gain a slight edge over Fighter Share combatants.

SHARING FIGHTERS

There's no need to create fighters in *MMA*—simply visit Fighter Share and choose "Download Fighters," then you can browse and download warriors created by other *MMA* enthusiasts across the globe! Naturally, you're also able to upload your own created fighters as well—refer to your instruction manual for complete details on this process.

CREATING ONLINE FIGHTERS

SHARING FIGHTERS

ONLINE STRATEGIES

BELT RANK

ONLINE STRATEGIES

Fighting is fighting, whether you're playing online or against the game. All of the information and strategies contained in this guide is fully applicable to online fights, so do your homework and read each chapter thoroughly!

Let's quickly recap some of the most important things to keep in mind about online play.

Feel Things Out. It's usually best to feel out your opponent at the start of each fight. Take your time on the feet, working your jabs and leg kicks. Become more aggressive as you begin to find your range and timing, or when the opponent gains the upper hand and you're forced to change the pace of the fight.

Defense Is Key. Maxing out all of your fighters' offensive attributes is tempting, but make sure your guys are rounded enough to escape from dangerous situations. Give strikers the ability to defend takedowns, work out of submissions, and to get back to their feet. Ensure your grapplers have excellent clinch control and ground defense as well as brutal offense and submission ability.

Do Your Homework. Whenever possible, scan your rivals' attributes to look for holes in their game that you can exploit, along with the areas in which they excel.

Never Give Up. MMA is a chaotic sport in which anything can happen. Don't panic after being suddenly rocked by a striker or taken down by a submission whiz—keep your cool and work out of these bad scenarios. Every fan of the sport knows that comebacks happen all the time in MMA—and these types of victories are all the more satisfying.

TIP

Before jumping online, watch some Fight Replays from the Leaderboards. Scouting users from the leaderboard helps you gain valuable strategies used by the top fighters online without first having to lose to them. You can stay current on the prevailing strategies by just watching fight replays of the best of the best. *Your* ranked fights are automatically uploaded, too, giving you the opportunity to go back and analyze why you lost each fight.

BELT RANK

The following chart shows how MMA's online belt ranking system works. There are 90 belts to achieve in all—strive to attain the highest belt and consider yourself a true MMA champion!"

STAND UP STRATEGIES

A powerful heavyweight, Alistair is nothing short of dominant on the feet. All of his strikes are devastating, though his kick range suffers dramatically when fighting at Light Heavyweight. Alistair's one stand up drawback lies in his lackluster movement speed; close in fast with flying knees and follow up with brutal combos.

Fighting against: Alistair Overeem—When fighting Alistair, don't linger in front of him for long. Exploit his average movement speed to create angles and get out of bad situations. Lead with leg kicks to slow Overeem down and set up combos. Though offensively powerful, Alistair has poor blocking and a weak chin, and can therefore be picked apart by savvy strikers.

CLINCH STRATEGIES

Alistair's a bully in the clinch, quickly piling on devastating strikes that can buckle foes in short order. Lock up into the Muay Thai clinch and batter your adversary with elbows and knees. Clinching up is a good idea when Alistair's chin starts to fail him on the feet. Use the clinch to score takedowns as well, setting up Alistair to end the fight with kimuras or head arm chokes.

Fighting against: Alistair Overeem—Overeem's clinch strikes are fast and powerful, but he comes up short in the control department. When Alistair clinches up with you, block to reduce damage and tire him, then look to reverse the clinch, break away, or turn the tables with a sudden takedown.

GROUND STRATEGIES

A well-rounded fighter, Overeem can take care of business on the ground. Though his takedowns and takedown defense leave something to be desired, Alistair has solid passing and grapple defense attributes, which help him control the action once it hits the mat. Alistair's ground strikes are as devastating as those he throws on his feet or in the clinch, and he's capable of ending the fight very quickly with a fast arm or neck submission. Overeem has plenty of these submissions in his repertoire, so he can tap opponents out from several different angles on the ground.

Fighting against: Alistair Overeem—Alistair is a tough nut to crack on the ground, so expect a grueling battle on the mat. Pass his guard to avoid falling into armbars, working methodically to score damage and control the action without sacrificing position. Pound Overeem's body and deny his attempts to get off his back to drain his stamina as you move toward a dominant ground position. Overeem is tough to tap, so wear him down before locking in a sub.

STAND UP STRATEGIES

One of the weaker fighters in the Heavyweight division, Andreas Kraniotakes boasts respectable punching power on the feet, but suffers from a lack of speed and range. Keep pressure on opponents when fighting as Kraniotakes, strategically backing them into a corner to reduce their ability to move. Shoot a takedown when the time is right to unload some of Andreas's lethal ground and pound.

Fighting against: Andreas Kraniotakes—When fighting Andreas on the feet, expect him to wade in with hooks, quickly changing levels to bring the fight to the mat. Always be ready to stuff a takedown, and use good footwork to exploit Kraniotakes's lack of movement speed, picking him apart with calculated attacks. Target his suspect chin and batter his body to wear away at his unimpressive stamina.

CLINCH STRATEGIES

Kraniotakes's clinch strikes are slow but heavy. He has solid control in the clinch, so use this position to soften up rivals with strikes, setting them up for a heavy double underhook takedown that puts Kraniotakes close to mount.

Fighting against: Andreas Kraniotakes—When facing Kraniotakes in the clinch, exploit his sluggish strikes to land more of your own—but be wary of his takedowns and be ready to stuff them. Focus on battering Kraniotakes's body to drain his stamina.

GROUND STRATEGIES

Kraniotakes's best position in a fight is on the ground, raining heavy leather down on his foes. His submission skills are not good, so focus on passing him to mount, where he can pour on the ground and pound. Kraniotakes's "major pass" special can help move you into dominant position very quickly.

Fighting against: Andreas Kraniotakes—The last place you want to be is underneath Andreas in a fight—his ground and pound is his strongest suit. Get to your feet as soon as possible to pick him apart with blistering strikes. Or, if ground fighting's your game, look to sweep Andreas from the bottom and tap him out. Andreas has solid grappling defense, but tapping him is certainly possible with an accomplished submission wiz.

STAND UP STRATEGIES

Arlovski is fast and fluid on the feet, but his strikes don't pack the same punch as the division's heaviest hitters. Use Arlovski's speed to land a few strikes on your way into a Muay Thai clinch, where Andrei is free to inflict damage without fear of leaving his vulnerable chin exposed to counters.

Fighting against: Andrei Arlovski—Though quick on his toes, Arlovski's chin is among worst in the Heavyweight division. When fighting Andrei, frustrate him on the feet with crisp counter jabs and hooks. Arlovski always comes in shape and boasts great stamina recovery, so look for the knockout instead of softening up the body. Wear Andrei out with leg kicks if he's outmaneuvering you.

CLINCH STRATEGIES

With a glass jaw to protect, Arlovski is wise to close the distance. Use Andrei's fast hands to get your opponent thinking "boxing," then quickly clinch up and deliver some rapid Muay Thai combos. Don't become overzealous with clinch strikes, however; focus on keeping the position, wearing down your opponent from the safety of the clinch, and thereby protecting Andrei's chin.

Fighting against: Andrei Arlovski—Arlovski throws fast combos in the clinch, but as with his standing strikes, they don't have the impact that you'd expect from a Heavyweight Muay Thai fighter. Arlovski's clinch control is also lacking; exploit this to break away from the clinch when he opens up with strikes, or turn the tables with a sudden takedown.

GROUND STRATEGIES

Arlovski's not entirely out of his element on the ground, but it's not his ideal place. He's not good at passing guard, and his grappling defense is low enough for those with skill to tap him out. Unless you're battling against a really poor grappler, quickly get Arlovski back up to his feet whenever the action hits the mat.

Fighting against: Andrei Arlovski—Though he's trained in a variety of submissions, Arlovski's tap out attributes leave much to be desired. Don't fear his subs when fighting against Andrei on the ground; instead, look to bring the fight to the mat to exploit his lack of grappling defense. Or simply avoid the ground entirely if you're an explosive striker—Arlovski's chin is the primary target in any fight.

Stamina Recovery	96

CLINCH STRATEGIES

Bas's clinch control leaves a little to be desired, but his clinch strikes come fast and heavy. Bas can really do some damage from the clinch, so work it against opponents who aren't as adept at fighting from this position.

Fighting against: Bas Rutten—When facing Rutten in the clinch, exploit his slight lack of control to either break away or turn the tables and gain the dominant position. Bas isn't as likely to take you down as he is to throw strikes, so focus on blocking his clinch blows and improving position.

STAND UP STRATEGIES

MMA legend Bas Rutten is a well-rounded fighter who's a force on the feet and able to rattle off fast, powerful combos. Favor using Bas's kicks, which inflict greater damage than his hands—use plenty of leg kicks to buckle your opponent's base. Circle to the right and deliver right hooks to the left side of the opponent's body to drop foes with Bas's patented liver shot. If you're facing a ground specialist, look to counter their takedowns by catching them in one of Bas's guillotines on the way in—"El Guapo" has excellent choke submissions.

Fighting against: Bas Rutten—Bas's speed and powerful kicks make him a formidable opponent on the feet, and his durable chin and gut make him tough to KO. Target his somewhat vulnerable legs to slow Bas down, which should make him easier to handle. Work the body as well to drain Bas's stamina.

GROUND STRATEGIES

Though far from the best tap-out artist in his division, Bas has a wealth of submission moves that allow him to slap on a sub from almost any ground position. Use Bas's heavy strikes to wear down foes, favoring his head arm choke to bring the fight to a sudden finish from side control. You can reach this position quickly by performing a takedown from the double underhook clinch, or from the over under clinch if you've got the opponent muscled up against the cage.

Fighting against: Bas Rutten—Bas is an offensive force on the ground, but his grappling defense leaves something to be desired. Beware of Bas's many submissions when rolling with him, particularly his chokes, and try to exploit his lack of defense on the ground by locking in a tight sub and forcing the old pro to tap. Don't toy with Bas on the ground if this isn't your fighter's world, however—it won't take long for "El Guapo" to finish off the unschooled down here.

STAND UP STRATEGIES

Radach is a tough fighter with good stand up skills. His speed and power are his greatest assets on the feet; use his fast hands and feet to land fluid kickboxing combos. Add to Radach's impressive power by making good use of his special strikes, such as flying knees and overhand punches. Stay busy and use combos to pile on the damage, creating opportunities to clinch up and deliver even more punishment.

Fighting against: Benji Radach—Benji's chin is suspect, so target his head when fighting him. If you're a ground fighter, get Radach to engage with overaggressive combos and then score takedowns to bring the action to the mat as quickly as possible. Here you may exploit Benji's lackluster ground game to great advantage.

CLINCH STRATEGIES

Benji's strikes are quite powerful in the clinch, and they come fast and fluid. Clinch up and press the opponent against the cage to lend greater impact to Radach's knees and elbows. Benji doesn't have the best clinch control around, so pick your shots carefully and be prepared to deny your opponents' attempts at escape.

Fighting against: Benji Radach—Benji's tough in the clinch and able to land fast strikes that quickly add up. Block his clinch strikes to wear him out so you may escape or change position. Benji isn't likely to try for takedowns given his inexperienced ground game, so simply block a few blows to wear him down before breaking away from his grasp. Or exploit his unimpressive clinch control to reverse the position or take him down.

GROUND STRATEGIES

Radach's ground and pound can be as fast and furious as his stand up and clinch strikes, but his modest passing ability makes it challenging for him to achieve dominant position against seasoned grapplers. Still, Benji is more than capable of pounding out those who have little skill on the ground, and Radach's own grapple defense makes him difficult to sweep or submit unless he's exhausted. Don't expect to end a fight with a submission by Radach, however. Benji has poor skills in this department and only a handful of submissions at his command.

Fighting against: Benji Radach—Benji can be a force if he manages to achieve dominant position on the ground, and also he's tough to tap out. Out-grapple him instead, planting Radach on his back and exploiting his poor passing ability to keep him there. Wear Benji down with strikes until you feel the time is right to submit him, or simply maintain top position to grind out a grueling victory.

STAND UP STRATEGIES

Like most Lightweight fighters, Evangelista has fast hands that lack the power of heavier strikers. Use Billy's furious combos to pick opponents apart while constantly forcing them backward, toward the cage. Clinch up when the time is right, then press them into the cage wall and start doing some real damage with knees and elbows.

Fighting against: Billy Evangelista—Billy's lackluster blocking and chin can get him into trouble on the feet. When striking against Billy, slow him down with leg kicks and go for fast headshot counters, but always be ready to shrug off a clinch or takedown attempt.

CLINCH STRATEGIES

Evangelista is most imposing in the clinch and he's one of the better clinch fighters in the Lightweight division. Lock up and deliver punishing shots, forcing Evangelista's foe against the cage to add even more weight to each blow. Work methodically to ensure your rival isn't able to break away and just keep wearing him down with calculated strikes.

Fighting against: Billy Evangelista—Evangelista's a handful in the clinch, so when fighting against him, it's best not to let him take the fight there. Always be ready to counter his clinch attempts and avoid getting cornered near the cage. If you do end up in the clinch, block Billy's blows to tire him out and escape or improve position the moment his stamina begins to dwindle.

GROUND STRATEGIES

Billy can handle himself on the ground, boasting impressive attributes across the board. However, with amateur-level submission skills, Billy is at his best when posturing up and raining down with his fists. Billy has a hard time passing the guard of seasoned grapplers, so bringing the fight to the mat is purely optional and should be primarily used against those with poor ground skills.

Fighting against: Billy Evangelista—Though a handful from the top position, Evangelista has trouble passing guard to get into dominant ground and pound submissions. Exploit this weakness by sweeping Billy when rolling with him, putting him on his back and working to keep him there. Billy isn't easy to submit, so focus on wearing him down from the top position, scoring points with the judges until a chance to end the fight presents itself. The longer you can keep Evangelista on his back, the better.

"The Beast" has the worst ground game in the Heavyweight division, so avoid hitting the mat at all costs. If you are taken down, focus solely on denying passes and submissions from the bottom, and get back up to your feet. Sapp can do some damage from the top position, but his poor grappling attributes make it difficult to maintain any sort of dominant stature for long.

Fighting against: Bob Sapp—Sapp can KO anyone while on his feet, but his ground game is garbage. If you have even modest grappling skills, fight smart and take "The Beast" to the mat as soon as chance permits. Use feints and footwork to set up takedowns without exposing yourself to Sapp's heavy hands, and once you bring the fight to the floor, work to pass Sapp's guard and make the big man squeal with a sub.

STAND UP STRATEGIES

Bob Sapp has some of the heaviest hands in the Heavyweight division and boasts good range on his punches—but that's about all he brings with him into the cage. "The Beast" suffers from a terrible chin, not to mention poor striking and movement speed. Sapp definitely wants to keep the fight on the feet, but you can't be overaggressive with him. Always be ready to stuff a takedown or clinch attempt, and forget about throwing anything beyond a two-punch combo—you can't risk leaving Bob's chin exposed. Frustrate your opponent with counter punches instead, looking for that one big punch that rocks your rival and hands you the victory.

Fighting against: Bob Sapp—"The Beast" isn't to be trifled with on the feet as he's capable of KO'ing anyone if just one of his meat hooks finds its mark. If you have even modest ground skills, take the fight to the mat against Sapp as soon as you're able and submit this unskilled grappler to avoid any chance of being caught by one of his heavy blows. If your ground game is no better than Bob's, exploit his lack of speed by dashing into and out of attack range, slipping his punches while scoring with strikes of your own. Work Sapp's vulnerable legs to slow him down to a crawl and hammer his glass jaw for the KO.

CLINCH STRATEGIES

Sapp's strikes don't lose much oomph in the clinch, so tie up with opponents whenever possible to protect his flimsy chin. Batter your rival with heavy shots from the clinch, but work carefully to prevent Sapp from losing position due to his unimpressive clinch control.

Fighting against: Bob Sapp—When fighting against Bob in the clinch, his heavy blows remain worthy of concern. Block to reduce damage and wear him out, looking to escape or score a takedown after the big man has tired. You don't need to fear takedowns from the clinch from Sapp, who has a dismal ground game, so simply look to reduce damage and improve your position when tied up with him.

The ground is Bobby's world; he's a tremendous wrestler with incredible takedowns and ground and pound. On the feet, use Bobby's dashing takedown to drive opponents to the mat. Or use takedowns from the double underhook clinch to end up in side control, close to mount. Lashley's lone drawback on the ground is his poor guard passing ability, so take time to soften up your rival with body shots before passing.

Fighting against: Bobby Lashley—Being underneath Lashley is about the worst place you could be. Bobby is tough to submit and sweep, and his strikes are devastating. Deny his attempts to pass—this is his only weakness on the ground. Get back to your feet when he opens up with strikes and be more careful with your strikes this time.

STAND UP STRATEGIES

If there's one place Bobby Lashley would prefer not to be in a fight, it's standing and trading punches. Though he can put his hands together to some effect, Lashley is far more dominant in a fight when roughing up his rivals in the clinch or on the mat. Throw a few setup punches to keep the opponent guessing, but don't wait long to clinch up, or use Bobby's dashing takedown to bring the fight to the floor.

Fighting against: Bobby Lashley—Keeping Lashley on the feet is the ideal strategy against this wrestling standout, but it isn't easy. Respect Bobby's grappling skills and strike sparingly, ready to sprawl against a clinch or takedown attempt at any moment. Select a fighter with the takedown counter strike special move to punish Lashley with a big knee each time he changes levels.

CLINCH STRATEGIES

Lashley's a bear in the clinch, with excellent clinch control and striking power. He doesn't have great speed or combos in the clinch, but with so much muscle behind each blow, he doesn't need to land many to get the job done. Use Lashley's clinch to put your opponent off-balance—while tied up, they won't know whether to block Lashley's heavy clinch strikes or deny his takedowns. Complete takedowns from the double underhook clinch to drive opponents to the mat with brutal slams that land you in side control.

Fighting against: Bobby Lashley—Being in the clinch with Lashley is no fun. His devastating power and control make him tough to deal with, and you've got to fear his takedowns as well. Avoid this position by always being ready to counter Lashley's clinch attempts. When caught in a clinch, focus on denying his takedown attempts to tire him, and look to break away.

STAND UP STRATEGIES

"The Grim" is a powerhouse on his feet, who can unleash rapid hand combos that can devastate anyone. Lead out with fast jabs and heavy hooks to break down opposing strikers, but be prepared to sprawl at any moment against seasoned grapplers—Rogers has trouble getting off his back.

Fighting against: Brett Rogers—When battling Brett on the feet, avoid trading punches. Exploit his slow movement speed by slipping in and landing a few long strikes without overexposing yourself to counters. Target "The Grim's" chin, which is solid but not indestructible. If you're using a ground fighter, implement feints to get Brett to engage, creating opportunities for takedowns.

CLINCH STRATEGIES

Rogers maintains his explosive striking power in the clinch, along with the speed to deliver enough blows to stop the fight quickly from this position. If your opponent's ground game is weak, use the double underhook clinch to score takedowns that put Brett close to mount, only a pass or two away from unleashing some devastating ground and pound from the mount.

Fighting against: Brett Rogers—"The Grim" is a beast in the clinch, but he does suffer from a slight lack of control. Take advantage of this when fighting him to break away from the clinch, improve position, or shoot a takedown.

GROUND STRATEGIES

Rogers is no slouch on the ground; he boasts exceptional grappling defense. He knows little of submissions but can end a fight as fast as any armbar or kimura with his devastating ground and pound. Rogers is poor at passing guard, so use takedowns from the double underhook clinch to arrive at side control, close to mount. Otherwise, it's usually best to avoid the ground game unless you're just trying to give Brett time to recuperate before returning to the feet.

Fighting against: Brett Rogers—Brett can bash your lights out in moments on the ground, so deny his attempts to pass into dominant position at all costs. He is tough to submit, so wear him down with strikes and superior grappling, scoring points as you erode Brett's unimpressive stamina.

STAND UP STRATEGIES

Cung Le enjoys the fastest hands and feet in the Middleweight division—put these advantages to good use by punching and kicking holes through opponents. Favor Cung's kicks, which have much greater impact than his punches, and target the legs to slow opponents down. Le's spinning kicks are especially nasty; target the body with them to knock the wind from your opponents from range. Use Le's spinning backfist to rock foes up close.

Fighting against: Cung Le—Cung is a handful on the feet, so unless your warrior has KO power, close in on Le with a flurry of jabs and look to clinch up or bring the fight to the ground as soon as possible. Cung has good takedown defense and can crack your skull with knees if you mistime a shot, so favor takedowns from the clinch instead. If you must strike with Le on the feet, attack his body to gas him out and drain his lackluster stamina.

CLINCH STRATEGIES

Cung is swift in the clinch, but his lack of striking power and clinch control make this an unfavorable position compared to the stand up game. Avoid tying up in the clinch unless your adversary is weak both there and on the ground. While Le can do some damage in the clinch, he has no business going to the ground, so most opponents will simply block his predictable clinch strikes until he's exhausted.

Fighting against: Cung Le—Le most likely won't clinch up with you, so you'll be the one instigating this position if the fight ever moves here. Use the clinch to great advantage against Cung, who isn't good at controlling this position. Batter his body with a barrage of knees, but don't become overzealous; focus on maintaining the position by always being ready to deny Le's attempts to escape the clinch as you slip in strikes.

GROUND STRATEGIES

The ground game is Cung's worst area by far, so avoid going to the mat by striking with care and kicking the opponent's legs and thereby eroding their takedown prowess. Always be ready to sprawl, aiming to catch your rival with counter knees each time they dive for the takedown. If you end up on the ground, use Cung's striking speed to land a few shots, creating an opportunity to stand back up and unleash more of his devastating kicks and spinning strikes.

Fighting against: Cung Le—Cung has good takedown defense on the feet, but he suffers from poor clinch control—exploit the double underhook clinch when fighting against him to bring this kickboxer to the mat. Work Cung's body on the ground to create opportunities to pass his guard, but always be ready to deny his prowess at popping back up to his feet. Le is susceptible to submissions by accomplished artists, so tire him out with strikes, attacking his unworthy stamina to eventually earn the tap.

STAND UP STRATEGIES

"Hendo" is a wrestler by trade, but he also enjoys some of the most damaging hands in the Light Heavyweight and Middleweight divisions. This makes Dan a handful for anyone; use his considerable reach and combo speed to string together jabs and hooks that can rock opponents, or to set up clinch and takedown opportunities. Be ready to sprawl against takedowns from grapplers, however—Dan can have trouble getting off his back when tackled by a top-tier ground specialist.

Fighting against: Dan Henderson—Henderson's fast hands and KO power must be respected when fighting against him on the feet, especially in the Light Heavyweight division. Dan is also a monster in the clinch and on the ground when he's on top, so be ready to stuff his clinch attempts and takedowns at all times. Fight a tactical battle on the feet against "Hendo," targeting his body with kicks and jabs to wear away at his stamina and prevent him from mounting much offense.

CLINCH STRATEGIES

Use Dan's fast hands to back opponents toward the cage, then go for the clinch to really rock them with knees and elbows while holding them against the fence. Dan can keep an opponent pinned to the cage for quite some time if you manage his stamina and remain vigilant against the adversary's attempts to change position. Use the clinch to give Dan the advantage, and to give rivals something extra to worry about when trading punches on the feet.

Fighting against: Dan Henderson—Only a handful of fighters can hang with "Hendo" in the clinch, so avoid this position when fighting against him. Your goal is to plant Dan on his back in any fight, so if you end up in the clinch, block his strikes to tire him out, then look for the takedown.

GROUND STRATEGIES

Henderson is a monster on top; he deals fast damage with brutal ground and pound, and is skilled enough to pass anyone's guard. Bring the fight to the ground with one of his fast dashing takedowns, or seize that double underhook clinch and plant your rival on his back with a punishing slam. Tenderize your rival's ribs as you strategically pass to mount, then open up with some fight-ending ground and pound.

Fighting against: Dan Henderson—With lackluster grappling defense, Dan is susceptible to submissions from the bottom and can have trouble maintaining top position. When fighting Dan on the ground, try snaring him in a sub from the bottom, sweeping him onto his back, or simply breaking away and standing back up, depending on which option seems most favorable at the time.

Eddie can handle himself on the ground, but grappling isn't his strong suit. Avoid the ground game and try to keep the action on the feet, using his boxing skills to win striking exchanges instead. If Eddie ends up on his back, strive to stand up right away—don't bother with sweeps and the like because Eddie's passing is poor. If you ever stuff a takedown and end up in the sprawl position, try locking in a Darce choke and ending the fight, using Eddie's neck submission skill to your advantage.

Fighting against: Eddie Alvarez—Alvarez is a boxer by trade, so putting him on his back is the key to victory. Though adept at neck submissions, Eddie can't perform any of these from his back, and his poor ability to pass guard and get back to his feet make him fairly easy to pound on once you've grounded him. Favor ground and pound over submissions against Eddie, exploiting his ineffective blocking. Even if you're not much of a ground fighter, put Alvarez on his back a few times during fights to score points with the judges and make him wary of rushing forward on his feet.

STAND UP STRATEGIES

A boxer by trade, Alvarez is at home on the feet, winging blistering punches at opponents and slipping in overhands to rock foes. Eddie's blocking is not great, however, so it's best to use movement and angles to slip in, land some strikes, then slip back out of countering range, instead of remaining in the pocket and blocking or parrying blows.

Fighting against: Eddie Alvarez—Alvarez is a fast and fluid boxer, so slow him down with leg kicks when striking against him—this also helps you corner him more easily. Eddie is skilled in the clinch and on the ground, but he truly shines on the feet, and likely won't clinch or shoot unless he's getting rocked. Go ahead and open up on Alvarez as his speed begins to dwindle. Exploit his poor blocking skills by pouring on the pressure with strikes once you get him backing up.

CLINCH STRATEGIES

Eddie is fairly average in the clinch, able to unleash fast strikes that have a modest sting. Eddie's clinch control isn't on par with some of the better grapplers in the division, however, so try to get things done on the feet with Alvarez. Enter the clinch only when necessary, or to give your opponent something else to think about besides Eddie's fists. To really surprise your opponent, score a fast takedown from a double underhook clinch, then lock in a head arm choke from side control—Eddie is accomplished at neck submissions.

Fighting against: Eddie Alvarez—When battling against Alvarez, the clinch can be a good place to take him if he gets the better of you in the stand up exchanges. Eddie is strong in the clinch, but other Lightweight fighters have significantly more control in this position, allowing them to score points and wear Eddie down while denying his attempts at escape. If your fighter excels on the ground, plant Alvarez on his back with an authoritative clinch takedown and begin to punish him down on the mat.

STAND UP STRATEGIES

Having recently submitted MMA legend Fedor Emelianenko, Fabricio Werdum is well known for his outstanding ground game. Werdum's no stranger to the art of striking, however, owning solid attributes across the board in the stand up department. Use his kicks and punches to set up takedowns, where Werdum can work his unstoppable submission game.

Fighting against: Fabricio Werdum—Fabricio is skilled enough on the feet to hang around with most strikers, but gifted knockout artists will eventually give him trouble. Be patient when striking against Werdum, slipping in single blows and short combos, but be ready to sprawl against a takedown at any moment. Strive to deny Fabricio the chance to grapple and you'll reduce this feared submission whiz to a moderately skilled boxer.

CLINCH STRATEGIES

Werdum is strong in the clinch, delivering more damage with his knees and elbows. His clinch control is decent, but more accomplished clinch specialists will have the advantage. Inflict damage from Fabricio's clinch if you're able to maintain the position; otherwise, simply use the clinch to set up takedowns, seeking to bring the fight to the mat where submission opportunities abound.

Fighting against: Fabricio Werdum—The clinch is a dangerous position to enter when fighting against Werdum. His strikes have more power here, and he's one step closer to achieving takedowns that put you in danger of being tapped. Don't bother with the clinch unless your fighter excels in this department. While it is certainly possible to overpower Werdum in the clinch, beating him on the feet is usually easier.

GROUND STRATEGIES

In any fight, grappling on the mat is where Werdum is most comfortable. With the ability to perform armbars and triangle chokes, Werdum is a threat from both the top and bottom positions. Kickbox with your opponents until you feel like bringing the fight to the floor, then slap on one of Werdum's fight-ending subs. If your first submission fails, immediately transition into another using Werdum's "submission chaining" special. Via Cavalo is an arm and neck submission wizard, so just keep stringing together sub attempts until your opponent is caught.

Fighting against: Fabricio Werdum—Bringing the fight to the floor against Fabricio is about the worst thing you can do, so strive to avoid this realm of the MMA game when battling him. Fabricio can lock in armbars and triangles from his back, so either pass his guard or stand up. Try to stay on your feet and pick apart Fabricio with tactical strikes. Plan to sprawl against his takedowns at any times. If Werdum manages to lock in a submission, be prepared to defend against his "submission chaining" ability—provided you're able to survive his first hold.

CLINCH STRATEGIES

Fedor's strikes lose significant force in the closeness of the clinch, but he enjoys excellent clinch control and combo speed. Use Fedor's clinch primarily to set up demoralizing takedowns that land "The Last Emperor" in position to tap his opponent just moments after they hit the ground.

Fighting against: Fedor Emelianenko—The clinch may be the best place to be in a fight against Emelianenko, but you've got to be patient in there with him. Don't allow him to break away or take you down—maintain a dominant clinch position and wear him out with sporadic strikes. Focus on maintaining an offensive Muay Thai clinch, scoring points with elbows and knees without sacrificing position.

STAND UP STRATEGIES

Arguably the best fighter walking planet Earth, Fedor Emelianenko is a force to be reckoned with on every level of the fight game. While standing, Fedor's great footwork, hand speed, and punching distance allow "The Last Emperor" to land heavy blows from just outside his opponent's countering range.

Emelianenko is the type of fighter that can take a punch to deliver one, and he's most often the one left standing after the exchange. Use Fedor's hands to rock opponents and dictate the pace of the fight.

Fighting against: Fedor Emelianenko—Facing Fedor on the feet is no picnic, but hey, the guy's a killer everywhere. Stay defensive, using leg and body kicks to slow him down and make him easier to deal with as the blows add up. Slip into a Muay Thai clinch after frustrating Fedor into rushing forward—it's unlikely that he'll KO you in the clinch as quickly as he can on the feet.

GROUND STRATEGIES

The ground is Fedor's world—the MMA legend is practically impossible to submit, and he happens to be a submission genius himself. This says nothing of Emelianenko's ground and pound, which is as fast and vicious as it comes. Lock in kimuras shortly after scoring takedowns, or work at passing Fedor to mount, where "The Last Emperor" can quickly end a fight via a brutal KO.

Fighting against: Fedor Emelianenko—Though he's a beast to deal with on the feet and in the clinch, Fedor is most dangerous on the ground; he can submit opponents from practically any guard or top position. Avoid hitting the mat with Fedor at all costs; strive to keep him tied up in a defensive clinch, where his strikes have less power and there's no chance of being subbed.

CLINCH STRATEGIES

Frank is more formidable in the clinch than he is on the feet, able to inflict greater damage with faster combos, and he can maintain control here quite effectively. Use Frank's clinch when he's getting beat on the feet, but primarily use this position to bring foes to the mat, where Frank can finish them off more quickly with submissions.

Fighting against: Frank Shamrock—Avoid tying up in a clinch when fighting against Frank. He can hold his own here and is also closer to scoring a takedown, which places you in danger of being submitted. Unless your fighter excels at clinch fighting, avoid this position and pick Frank apart with standing strikes instead.

STAND UP STRATEGIES

Though skilled in all areas of the fight game, Frank Shamrock is weakest on the feet. His punches and kicks have only average power, and his striking range leaves something to be desired. This forces Frank to enter countering distance if he's to land multiple blows. It's therefore best to use Shamrock's stand up only as a means to an end: getting the fight to the floor, where Frank's submission skills can shine. Use Frank's array of stand up specials to keep opponents off-balance with unusual blows such as spinning kicks, overhand punches, and flying knees.

Fighting against: Frank Shamrock—Shamrock has several special strikes at his disposal, so expect Frank to use these to close the distance, and be ready to block, dash out of the way, or interrupt these moves with sharp counter jabs and straights. Pick your strikes with care against Frank, focusing on scoring points as you defend against the clinch and takedown.

GROUND STRATEGIES

Shamrock's strongest suit is the ground game, where he's capable of ending fights in a blink from practically any position with sudden submissions. Frank is equally good at finishing all of his many submission moves, so don't hesitate to lock one in from any angle. Frank's ground and pound is also quite effective, but it's best used to soften up adversaries for some sort of nasty tap-out maneuver.

Fighting against: Frank Shamrock—Avoid grappling on the mat against Frank if you can—he has too many moves down here. Always be ready to counter his submission attempts as you look to stand back up. Shamrock lacks the "submission chaining" special, so if you're rolling with him on the ground, strive to survive his submissions and you'll end up in a dominant position. Whenever this occurs, take the opportunity to unleash some brutal ground and pound, or simply stand up and bring the fight back to the feet, farthest away from Shamrock's strengths.

STAND UP STRATEGIES

Frank has average attributes across the board in the stand up department, with a slight edge in punching power over others in his weight classes. Use Trigg's quick hands to score damage and back up your opponent on your way into the clinch, where Frank can do some real damage.

Fighting against: Frank Trigg—Battling against Trigg on the feet means being wary of fast overhands and countering these with headshots. Look to shatter his somewhat weak chin, but always be prepared to stuff his clinch attempts.

CLINCH STRATEGIES

Frank does well in the clinch and is able to maintain position against even top-grade grapplers with his effective control. Being in the clinch also means that Frank's chin is less exposed to flash KOs. Use Frank's fast hands to close the distance and clinch up, then sneak in strikes to score points and inflict damage without sacrificing position.

Fighting against: Frank Trigg—Frank fights best in the clinch, so avoid this position when battling against him. If he ties you up, look to improve position or break free when he opens up with strikes—you don't need to fear Frank's damage in the clinch so much as his control.

GROUND STRATEGIES

Frank's low defense against ground maneuvers makes rolling against submission experts a risky gamble. When Trigg fights against a submission expert, avoid the ground and keep the fight standing or in the clinch. However, if the opponent doesn't fare well on the ground, use takedowns from the clinch to quickly move Trigg to side control, then slap on one of Frank's powerful head arm choke submissions.

Fighting against: Frank Trigg—Frank is most vulnerable when planted on his back, but his great skill at passing guard means he's more than capable of sweeping his opponents. If you're using a striker, try to beat Frank on the feet, stuffing his shots and clinch attempts, and shooting for the occasional takedown of your own to score points and mix things up. If you're a submission expert, bring Frank to the mat on your terms and look to tap Trigg out, exploiting Frank's poor grappling defense to end the fight quickly.

STAND UP STRATEGIES

Mousasi has fast hands and powerful kicks, and he can take a pounding on the feet. Fight tactfully, aiming to wear down your rival with punishing kicks to the legs and body. Mousasi doesn't pack a tremendous punch, so use his strong kicks to score damage and his quick hands to counter aggressive strikers and set up takedowns. Gegard has lackluster takedown defense, so keep a distance and be ready to sprawl.

Fighting against: Gegard Mousasi—"The Dreamcatcher" is good on his feet, but he's even more dangerous in the clinch and on the mat. It's therefore best to keep Mousasi on his toes when fighting against him. Keep the pressure on Gegard to avoid being picked apart by his powerful kicks from outside of your countering range.

CLINCH STRATEGIES

Mousasi's clinch game is excellent; he enjoys superior control and combo speed in this position. Soften up opponents with fast strikes, then use the clinch to score a huge takedown slam when they begin to block. Try to control the clinch position for a while if it seems to be working; Gegard is hard to shrug off if you're patient with his clinch offense.

Fighting against: Gegard Mousasi—Avoid entering the clinch when fighting against Mousasi—he has too much speed and control in this area, and he can take you down too easily. Rock him on the feet instead and be ready to stuff his clinch attempts at any moment.

GROUND STRATEGIES

Gegard is most dangerous on the ground, where he's able to destroy opponents with blistering ground and pound, or quickly tap them out with an array of submissions. Score takedown slams from the clinch with Mousasi to land in side control, where the head arm choke presents itself—one of Gegard's best submissions from the top. Reclaim guard after suffering a takedown and lock in a triangle from Mousasi's back.

Fighting against: Gegard Mousasi—Unless you're a brilliant grappler, avoid combatting Gegard on the ground. Mousasi's ground strikes are too furious and his wide array of submissions allows him to end the fight from several angles. Keep Gegard standing and apply steady pressure to beat him up with powerful blows on the feet instead.

STAND UP STRATEGIES

Gesias is a jiu jitsu practitioner by trade, but he also owns some of the best kickboxing in the Lightweight division. Cavalcante's hands and feet are fast and powerful; use them to break down adversaries as you set up takedowns to unleash some lethal ground and pound. Don't fear being dragged to the mat; "JZ" can perform nasty triangles off his back. Counter takedown attempts with guillotines and Darce chokes if you can to instantly employ some of Cavalcante's jiu jitsu.

Fighting against: Gesias Cavalcante—Cavalcante is dangerous on his feet, but fighting against him on the ground is even worse. Avoid shooting for takedowns against him and focus on beating him in the stand up game instead. Cavalcante has few drawbacks on the feet, but it's the least dangerous place to fight him.

CLINCH STRATEGIES

Use Cavalcante's clinch to assail opponents with lightning-fast strike combos. Gesias has solid clinch control, but it's best to use the position to bring the fight to the ground rather than linger in the hold—Cavalcante is far more gifted on the ground.

Fighting against: Gesias Cavalcante—Gesias's clinch offense is strong, but his control isn't spectacular. Beware the takedown when battling Cavalcante in the clinch, and break away as soon as you're able, returning to calculated striking exchanges to get the job done.

GROUND STRATEGIES

Though Gesias is well rounded, his best game is on the ground. Use Cavalcante's furious strikes to set up clinch or takedown opportunities, moving the fight to the mat to do some real damage. Gesias has fantastic ground offense as well as defense, and he can finish a fight very quickly with a sudden head arm choke, triangle, or rear naked choke. Favor Cavalcante's choke submissions—they're far better than his joint locks.

Fighting against: Gesias Cavalcante—Gesias is a monster on the ground, so strive to keep the fight on the feet. If he scores a takedown, work to stand up as quickly as possible before he can do much damage with his rapid ground and pound. Avoid lingering in positions where Gesias can apply chokes and try luring him into going for limb submissions—these are easier to reverse, landing you in top position where you can escape back up to your feet more easily.

STAND UP STRATEGIES

Melendez's kicks are far from the fiercest in the Lightweight division, but he does own some of the division's fastest and most lethal hands. Gilbert also has a fantastic shot—perform dashing takedowns to bring the fight to the mat, where Melendez can unleash his overwhelming ground and pound.

Fighting against: Gilbert Melendez—When fighting against Melendez, you must respect his takedown ability at all times. Strike with caution and avoid over-engaging to maintain a chance at stuffing Gilbert's shots. Use good footwork and plenty of leg kicks to keep your distance and slow Melendez down.

CLINCH STRATEGIES

"El Nino" strikes well in the clinch, but he doesn't have mastery of control in the position like other Lightweight fighters. Gilbert can hold his own in this position, but he's better at using the clinch to wear down rivals in preparation for a takedown.

Fighting against: Gilbert Melendez—Utilize the clinch against Melendez if you're using a fighter with superior control in this area—you may find Gilbert easier to handle here than on the feet. Avoid the clinch otherwise; the closeness puts you in range of Melendez's powerful takedowns.

GROUND STRATEGIES

The ground is the best place for Melendez in a fight, but with only one submission in his toolset, Gilbert prefers to be on top, raining down leather. Use Melendez's fast hands to set up dashing takedowns, bringing the fight to the ground with force. Take advantage of Gilbert's superior grappling skills as you work at passing to mount, while throwing fast strikes to the body to drain the opponent's stamina. Posture up and go for the KO, denying all of your rival's attempts to get back to his feet.

Fighting against: Gilbert Melendez—Although Melendez has just one submission, his dominant grappling skills and ground and pound rate among the best in the Lightweight division. When fighting Melendez, avoid the ground game entirely and try to outpoint "El Nino" on the feet. Fight patiently and stuff Gilbert's takedowns as you utilize leg kicks and body shots to slow him down.

STAND UP STRATEGIES

Suffering from a lack of striking power, “Mach” Sakurai is more competitive on the feet at Lightweight than he is when mixing it up against Welterweight knockout artists. Make up for his lack of KO power by using his special moves on the feet, including the powerful spinning backfist and flying knee. Sakurai is at his best when fighting on the ground, so primarily use his stand up as a precursor to scoring with his dashing takedowns.

Fighting against: Hayato Sakurai—Sakurai is out of his depth on the feet, especially when fighting at Welterweight. Keep the fight standing to put him at a disadvantage. Sakurai doesn't have great takedowns, so open up with your strikes as you begin to wear him down. Beware of Hayato's unorthodox stand up attacks as you kick out his legs and batter his face with punches.

CLINCH STRATEGIES

“Mach” isn't great in the clinch, but he can use the position to help him score takedowns more easily. If Sakurai's shots keep getting stuffed, try tying his opponents up instead and slamming them to the mat from the clinch. Hayato has lackluster clinch control, so don't remain in this position for long. Get the takedown and start working Sakurai's ground game.

Fighting against: Hayato Sakurai—There's little reason to enter the clinch when fighting against “Mach”—he's easier to beat on the feet. Use this position only if you're using a clinch fighting specialist; otherwise, simply keep Sakurai at range and pick him apart with superior striking.

GROUND STRATEGIES

Hayato is at his best when fighting on the ground, able to slap on submissions from several positions, even while he's on his back. Work at bringing the fight to the ground with Sakurai, using takedowns from the clinch if your shots keep getting stuffed. “Mach” has more sting on his ground and pound punches than he does in any other position; welt the opponent's ribs on your way to securing a fight-ending arm lock or choke.

Fighting against: Hayato Sakurai—There are better grapplers in the game than “Mach” Sakurai, but with a variety of submissions and solid grappling skills, Hayato's ground game is his strongest suit. Unless you're using a submission standout, avoid hitting the mat by stuffing Sakurai's unimpressive shots and wearing him down in the stand up game.

STAND UP STRATEGIES

Trading blows on the feet isn't easy on Yoshida; his lack of speed, range, and power make him an easy mark for gifted strikers. Fortunately, Hidehiko has excellent takedowns—dash in and drive opponents to the mat, then work to side control and stop the show with a head arm choke. If you're fighting a grappler, try stuffing his shots late to end up in the sprawl position, where Yoshida can force the tap by way of a Darce choke.

Fighting against: Hidehiko Yoshida—Attack Yoshida's legs when striking against him, slowing the big man down while exploiting his lack of reach. Keep your distance and use long strikes to cripple him while remaining vigilant against his powerful takedown ability.

CLINCH STRATEGIES

The clinch is a better place for Yoshida than trading strikes on the feet. Tie up and look to maintain the dominant position, using Hidehiko's superior clinch control to keep the opponent locked in place as you work him over with knees and elbows. If the opponent begins to block, slam him to the mat with a heavy clinch takedown and begin to work Yoshida's crushing top-game.

Fighting against: Hidehiko Yoshida—Yoshida has too much control in the clinch, so avoid this position when fighting against him. Strive to break away from his grasp each time you lock up, and avoid falling into the clinch again by keeping your distance and utilizing your fighter's reach advantage on the feet.

GROUND STRATEGIES

Yoshida has great takedowns and clinch control, which help him plant adversaries on their backs. Once there, Hidehiko's outstanding grappling defense helps keep them there. Maintain position with Yoshida as you work for head arm chokes from side control—Hidehiko's choke submissions are lethal.

Fighting against: Hidehiko Yoshida—Yoshida is a force on the mat, wielding fantastic passing ability, grapple defense, and neck submissions. He also knows several fight-ending chokes, including triangles that he can slap on from his back. Avoid rolling against this judo whiz, using sprawls, leg kicks, and long strikes to keep Yoshida at bay on the feet.

STAND UP STRATEGIES

Jake Shields's weakest area is the stand up game, but his unstoppable dashing takedowns can help him change the fight quickly. Use Jake's speed on the feet to entice the opponent into striking, then dash in for a takedown to bring the fight into Shields's world.

Fighting against: Jake Shields—When combatting a grappler of Shields's stature, keeping the fight on the feet is vital. Maintain your distance, using long jabs and leg kicks to keep Shields at bay. Strike sparingly and always be ready to sprawl out against Jake's exceptional takedowns.

CLINCH STRATEGIES

Shields is dominant in the clinch, boasting the best control of all fighters in both of his weight divisions. Tie opponents up in the clinch, throwing strikes to set them up for takedowns—this is especially important when opponents are countering your stand up shots with knee strikes. Or simply control the dominant Muay Thai position and score points as you inflict steady damage.

Fighting against: Jake Shields—Shields has fantastic clinch control, so keep a distance when facing Jake on the feet and strive to deny his attempts to tie up with you. If Jake does manage to clinch up, struggle to break away rather than blocking his fast but light clinch strikes.

GROUND STRATEGIES

Shields is one of the best ground fighters in the business, with tremendous passing ability and grappling defense. Though his ground strikes lack might, he can deliver fast combos that can quickly add up

to heavy damage. Bring fights to the floor as soon as possible when using Shields, working to set up triangle chokes from the bottom or head arm chokes from the top—Jake's neck submissions are his most effective subs.

Fighting against: Jake Shields—Rolling on the floor against Shields is not a sound strategy. Get to your feet as soon as possible each time he brings you down and strive to deny Jake's powerful takedowns by keeping your distance and striking with care. If you must grapple with Shields, work to keep him on his back and stay out of his guard.

STAND UP STRATEGIES

Jason “Mayhem” Miller is a well rounded fighter, but he gives up a lot of punching power when fighting at Light Heavyweight. Miller is most dangerous on the ground, so use his fast, rangy stand up skills to land leg kicks and jabs while looking for the clinch or shot. Use his flying knee and superman punch specials when closing in from afar—“Mayhem” may get lucky and rock the opponent with these heavy shots.

Fighting against: Jason Miller—When

fighting against Miller, it's usually best to keep things standing. Pressure him on the feet to nullify his range advantage, but beware his takedowns, timing your strikes with care. Avoid shooting on Miller, who has a nasty triangle off his back. Look for the clinch when you get rocked to clear your head instead.

CLINCH STRATEGIES

Jason can hold his own in the clinch, where his striking power is closer to being on par with others in his weight classes. Use Miller's clinch as often as possible to land crisp knees and elbows

before bringing the fight to the ground with a punishing slam. Go for double underhook takedowns to land in side control, ready to end the fight with a fast head arm choke.

Fighting against: Jason Miller—“Mayhem” is more difficult to battle in the clinch than he is on the feet, so break away from his grasp and try to keep things standing. Miller doesn't have the greatest clinch control around, so look to break free as soon as possible.

GROUND STRATEGIES

Miller's exceptional grappling defense means he can roll on the mat with confidence. His chokes are vicious; use his triangles from his back and work for head arm chokes while on top. Jason's ground and pound is also quite impressive; unleash it to wear down foes so you may perform passes and submissions with greater success.

Fighting against: Jason Miller—“Mayhem” has too many submissions on the ground to risk rolling against him, so do what it takes to keep the fight standing when facing him. Though Jason has great grappling defense, his passing isn't spectacular, and he can be worn out if you continue to deny his attempts to pass into choke position. Whenever Miller plants you on your back, strive to nullify his ground game and return to your feet as quickly as possible.

STAND UP STRATEGIES

Jay Hieron's striking game is average, and is best used to set up clinch attempts and takedowns. "The Thoroughbred" has a suspect chin, so find a way to close the distance and begin grappling with his opponents. Use Jay's flying knees and superman punch to close in from the outside as well.

Fighting against: Jay Hieron—When fighting against Hieron, keep the battle on the feet. Always be ready to stuff his powerful takedowns as you pick away at Jay with leg kicks and straights, wearing him down by eroding his lackluster defense.

CLINCH STRATEGIES

Hieron is a worthy grappler and can work the clinch to great effect. Use Jay's clinch to tie up with opponents, controlling the position as you wear them down with strikes. Look for double underhook takedowns that land Jay in side control, ready to end the fight with a suffocating head arm choke.

Fighting against: Jay Hieron—The more distance you can keep between yourself and Jay Hieron in a fight, the better. Use jabs and leg kicks to score points while keeping "The Thoroughbred" at range. Hieron has good clinch control, so expect a struggle to break free after he latches on.

GROUND STRATEGIES

With outstanding grappling defense and good passing ability, Jay Hieron can battle on the mat with little fear. Set up Jay's powerful takedowns on the feet, or slam opponents to the mat from the clinch, positioning him to end the night with a head arm choke from side control. Unleash Jay's devastating ground and pound to open up opportunities to pass guard and lock in subs.

Fighting against: Jay Hieron—Jay's grappling defense is basically impenetrable, so avoid the ground game when fighting against him. Keep the wrestler at range and try to catch him on the chin when he dives in to grapple. Deny Hieron's attempts at passing guard and struggle to return to your feet after each takedown to "The Thoroughbred" lands.

CLINCH STRATEGIES

Jeff is strong in the clinch, boasting excellent control over the position. His strikes gain a bit of power in the clinch as well. Use Monson's clinch to wear opponents down as you work for a takedown. Get the fight to the floor without delay and start looking for submissions.

Fighting against: Jeff Monson—Don't clinch up when fighting Monson—this only puts him in range to land heavier shots and score takedowns. Outstrike the stocky grappler by staying at range and always being ready to deny his clinch attempts. Monson works slowly in the clinch; deny his takedowns and strive to break free as soon as possible.

STAND UP STRATEGIES

Monson is a fantastic grappler, but his stand up game leaves much to be desired. His strikes are slower and weaker than most Heavyweights, and his lack of range forces him to close into countering range when exchanging. Focus on bringing the fight to the clinch or ground, where Monson can quickly secure a submission victory.

Fighting against: Jeff Monson—"The Snowman" is a fearsome ground fighter, so attack his shortcomings by keeping the fight on the feet. Stuff Monson's clinch attempts and takedowns, keeping your distance to exploit Jeff's lack of reach. Monson's body is tough to damage, so punish his vulnerable legs with kicks and target his suspect chin for the KO.

GROUND STRATEGIES

"The Snowman" is a brilliant wrestler with fantastic ground and pound, submissions, and chokes. When using Monson, strive to bring the fight to the mat before he suffers too much damage on the feet. Use his dashing takedown to quickly close in, or work for takedowns from the clinch. Use Jeff's heavy ground and pound to set up submissions, favoring armbars, kimuras, and chokes over his leg locks.

Fighting against: Jeff Monson—The ground is not where you want to be when fighting against Monson. His grappling defense is too high to make him prone to submissions, and his ability to finish a fight in seconds following a takedown must be respected. Take "The Snowman" out of his element by keeping the fight on the feet with sprawls. Nullify Jeff's submissions if he takes you down and stand up the moment you're able.

STAND UP STRATEGIES

One of the fastest fighters on his feet, Hansen is known for exceptional footwork and lightning-quick strikes. Use his great movement speed to create angles and dictate the pace of the stand up game.

Joachim's power leaves something to be desired, particularly when fighting at Welterweight, so use his speed to slip in with strikes and counter aggressive foes. Unleash Joachim's flying knee special to rock opponents from range.

Fighting against: Joachim Hansen—Hansen's chin is somewhat fragile; exploit this when fighting against him, looking to score the KO blow. Joachim also has holes in his grappling defense, so when Hansen starts slinging combos, skilled ground fighters should look for the takedown, aiming to work their submissions on the mat.

CLINCH STRATEGIES

Though fast as ever in the clinch, Hansen is unable to utilize his outstanding footwork in this position. Avoid the clinch when using Joachim, seeking instead to pick apart foes with crisp

kickboxing combos. If the opponent manages to clinch up, deny his takedowns and unleash some fast strikes to make him think twice about tying up again.

Fighting against: Joachim Hansen—Joachim's speed makes him dangerous in the clinch, but his lack of control creates opportunities for damage and takedowns in this position. Use the clinch against Hansen when he's too hard to tag on the feet. Attack his fragile jaw and look for the takedown to set up a fight-ending submission.

GROUND STRATEGIES

Hansen is an effective offensive wrestler, but his poor grappling defense leaves him exposed to submission experts. Hansen should avoid the ground game if the opponent is a skilled tap-out artist.

However, if the opponent isn't a practiced grappler, shoot for takedowns to keep the opponent guessing and unleash some of Joachim's blistering ground and pound. "Hellboy" has poor submission skill, so don't get caught up with the grappling game if he's been planted on his back; get up quickly, returning to fight on the feet.

Fighting against: Joachim Hansen—When Hansen becomes overconfident with his striking combos, take him down and exploit his lack of ground defense by tapping him out. Beware Joachim's ability to sweep and pop back up to his feet; strive to maintain dominant position against him as you work to secure the tap.

STAND UP STRATEGIES

“Diesel” Riggs is a well-rounded fighter who can handle himself anywhere in a fight, but he doesn’t particularly shine in any one area. This means you must play to your opponent’s weaknesses when using Riggs. If the rival is strong on the ground, try to keep the fight on the feet. Make up for Joe’s lack of KO power by delivering overhand punches, superman punches, and spinning backfists.

Fighting against: Joe Riggs—When fighting against “Diesel,” use the striking game to exploit his poor blocking and a flimsy chin. Keeping Joe on his feet also keeps you away from his dangerous submissions on the ground. Riggs suffers from poor defensive grappling, however, so shoot in and take him to the mat if you’re using a gifted submission artist with good grappling defense.

CLINCH STRATEGIES

Joe is completely average in the clinch, but this can be a good spot for him if he’s losing the stand up battle. Move to the clinch to increase Joe’s striking power and place him in a better position to score takedowns.

Fighting against: Joe Riggs—Exploit Joe’s lack of control to score damage in the clinch, but beware of his takedowns. Use the clinch against Riggs to wear him out and set up takedowns of your own.

GROUND STRATEGIES

“Diesel” isn’t a spectacular grappler, but he is able to implement a variety of effective arm locks and choke holds. Shoot for takedowns with “Diesel” when you’re not having much luck on the feet, and struggle to maintain position as you work for the tap. Beware of being swept, however; Joe has trouble with defensive grappling and can struggle to free himself from precarious ground positions.

Fighting against: Joe Riggs—Exploit Joe’s sorry ground game by putting him on his back and keeping him there with superior wrestling. Beware Riggs’s armbars from the bottom and work to pass his guard so you may slap on a fight-ending submission, thereby exploiting Joe’s lackluster grappling defense.

CLINCH STRATEGIES

Josh has few advantages in the clinch, owning mediocre attributes and poor position control. Use Barnett's clinch as a means to bring the fight to the ground, where his strong submission skills can be used to quickly end the fight. Don't linger in this clinch for long or the opponent may gain control and use the position against you.

Fighting against: Josh Barnett—Barnett's clinch control is among the worst in the Heavyweight division—use the clinch against “The Babyfaced Assassin” to work him over. Focus on maintaining control as you land punishing knees and elbows. Strike with care in the clinch; be ready to deny Barnett's efforts to achieve an easy takedown.

STAND UP STRATEGIES

Barnett is a fairly average striker with good range, speed, and power in both his hands and feet. His striking is far from spectacular, however, so use it primarily to set up takedowns. Bring the fight to the ground, where Barnett can end things quickly with a variety of effective arm locks and chokes.

Fighting against: Josh Barnett—When fighting against Barnett, expect him to go for the takedown early and often, and always be ready to sprawl against it. Barnett's takedowns are not great, so keeping the fight on the feet is fairly easy if you remain patient. Land blows to the body to tire Barnett, attacking his lackluster cardio.

GROUND STRATEGIES

Barnett does his best work on the ground, able to quickly end fights with his crushing arm locks and chokes. His takedown ability is poor, so maximize your time on the mat each time you succeed in bringing the fight here. Work for kimuras from half guard and armbars or head arm chokes from side control—these are among Josh's best finishers.

Fighting against: Josh Barnett—Josh's ground game is strong, so there's little sense in combatting him on the mat. Keep the fight standing by stuffing Barnett's lackluster takedowns and controlling him in the clinch game. Beware Josh's subs if you hit the mat—he has an array of them. Deny his submission attempts and get back to your feet as fast as you can.

STAND UP STRATEGIES

An accomplished kickboxer, Thomson has excellent strikes on the feet and is able to unleash blistering combos. His lack of reach forces Josh to close in to inflict serious damage, so pressure his adversaries on the feet, backing them toward the cage and looking to set up a clinch or takedown.

Fighting against: Josh Thomson—When striking against Thomson, use plenty of kicks to keep out of his range, targeting his vulnerable legs. “The Punk” is dangerous in the clinch and on the ground, so try to keep the fight standing for as long as possible. Batter Thomson’s legs to shut down his offense.

CLINCH STRATEGIES

Josh is at home in the clinch, owing fantastic control and speed, and gains a small bump in his striking power. Use his fast stand up combos to maneuver into the clinch, where Thomson can deliver even more damage with rapid elbows and knees. Control the clinch for as long as possible, scoring a brutal takedown once the opponent begins to block heavily.

Fighting against: Josh Thomson—If you end up in the clinch against Josh, block his strikes to tire him and look to escape as soon as possible. Thomson has excellent clinch control, so you’ll need to outwork him to escape this dangerous position. Strike tactfully and keep Josh at bay to avoid entering the clinch with him.

GROUND STRATEGIES

“The Punk” has excellent grappling skills and good arm submissions, so feel comfortable taking the fight to the mat. Score with takedowns on the feet and use Thomson’s furious ground and pound to open up submission opportunities. Armbars are the go-to subs for “The Punk.”

Fighting against: Josh Thomson—Unless you’re supremely confident in your grappler’s skills, avoid rolling on the floor with Thomson. His arm locks are too dangerous, and his excellent grappling ability makes him tough to deal with on the mat. Work the stand up game against Josh, exploiting his lack of reach by crippling his vulnerable legs with long kicks.

STAND UP STRATEGIES

Misaki is a well-rounded fighter, but he also suffers from mediocre stats across the board. His stand up game is particularly weak when fighting at Middleweight, where most other fighters

hit much harder. Use Misaki's fast hands to set up takedowns, where the "Grabaka Hitman" can bring his impressive array of submissions to bear.

Fighting against: Kazuo Misaki—Try to remain standing when fighting against Misaki—his submission game is by far his greatest strength. Target his vulnerable legs with rangy kicks until you slow him down, then start testing his chin as you open up with more combos. Beware his takedowns at all times and don't over-engage to maintain the ability to sprawl.

CLINCH STRATEGIES

Misaki isn't much better in the clinch than he is on the feet, with mostly below-average attributes. His lack of control over the position means Misaki's clinch is best used to bring the fight to the floor, where his submission skills can shine.

Fighting against: Kazuo Misaki—Misaki's lack of clinch control means you can rough him up in this position, but the clinch puts you closer to a takedown, which isn't good. Try to beat Misaki on the feet, avoiding this position unless you're having little success in the stand up game.

GROUND STRATEGIES

Take the fight to the floor as soon as Misaki is able to and work toward locking in one of his submissions. Kazuo doesn't have the best grappling defense or passing ability, so be patient on the mat and work for subs without sacrificing position. Kimuras should be your go-to holds following each takedown, unless you're able to pass to side control and lock in a head arm choke. Look for triangles off Misaki's back as well.

Fighting against: Kazuo Misaki—Misaki has holes in his ground game, particularly in the area of defense, but his talent for submissions makes him a dangerous adversary to roll with. He is easier to beat on the feet, so try rocking him in the stand up department instead of taking the fight to the floor.

STAND UP STRATEGIES

One of MMA's legendary icons, Ken Shamrock is a dangerous grappler who must make do with limited ability in most other areas of the fight game. Don't get caught up in striking exchanges when using Ken; lure the opponent into engaging on the feet, then change levels and shoot in for a takedown as soon as he starts to throw.

Fighting against: Ken Shamrock—

Shamrock's weakest area is his stand up game, so this is the best place to fight him. Pick Ken apart with footwork and swift strikes, exploiting his low defense scores—but remain ever vigilant to sprawl against his takedowns. Keep Ken on his feet to reduce the feared submission expert to a merely average boxer.

CLINCH STRATEGIES

Shamrock's isn't overpowering in the clinch, so use the position primarily to escape from the stand up game and bring the fight closer to Ken's world of mat submissions. Go for takedowns in the clinch, working for submissions the moment the action hits the floor.

Fighting against: Ken Shamrock—Damage can be done to Ken in the clinch, but the risk of being taken down and submitted makes this a dangerous position in which to fight him. Avoid tying up with Ken; instead, break him down with standing kicks and punches.

GROUND STRATEGIES

Shamrock's grappling ability is quite good, and although his ground and pound doesn't impress, "The World's Most Dangerous Man" chiefly uses his wrestling to set up fight-ending submissions. Immediately look to lock

in kimuras after scoring takedowns, calling upon his fantastic array of leg locks if the opponent manages to retain guard. If a submission attempt fails, quickly use Shamrock's "submission chaining" ability to roll into another hold. Keep switching between submissions until Ken's nemesis is at last forced to tap.

Fighting against: Ken Shamrock—Don't roll with Shamrock, even if you feel that you're the better grappler—his submission skills are far too dangerous, and he's likely to catch you in something sooner or later. Stuff Ken's shots and exploit his poor stand up game to score the KO victory instead.

STAND UP STRATEGIES

Randleman might be a monster on the ground, but his stand up game has plenty of holes. Use his relentless takedown ability to bring the fight to the floor as soon as you're able—Kevin's chin can't risk prolonged exposure to strikes on the feet.

Fighting against: Kevin Randleman—Striking against “The Monster” is a good way to beat him, but his relentless takedowns can be difficult to deal with. Keep your distance from Randleman and dissect him with quick strikes and be ready to stuff his shot at any moment. Target the head to rock Kevin with shots, looking to shatter his glass jaw. Or, if you're a submission whiz, look for the takedown and slap on a quick sub, exploiting Randleman's terrible grappling defense.

CLINCH STRATEGIES

Randleman is strong in the clinch and can use the position to better protect his soft chin. If Kevin's takedowns are being met with knees on the way in, work the clinch game instead to score damage and finish takedowns more safely.

Fighting against: Kevin Randleman—Randleman isn't the most gifted clinch fighter in his division, but you never want to be this close to him if you can avoid it. Try to keep the fight standing, using the clinch only if your fighter excels in this area.

GROUND STRATEGIES

Use Randleman's dashing takedown to bring the fight to the floor as soon as your able, or work for debilitating slams from the clinch. Either way, put the opponent on his back and let “The Monster” annihilate him with relentless ground and pound. Randleman has horrible grappling defense, so don't linger in the opponent's guard; use Kevin's strong passing ability to move into mount, where “The Monster” has every advantage.

Fighting against: Kevin Randleman—Though Randleman is a beast on top, his horrendous grappling defense makes him very susceptible to submissions. Exploit this weakness if your fighter has any submission ability whatsoever and score a takedown on Kevin to tap him out in short order.

STAND UP STRATEGIES

Kron Gracie is an untested Lightweight, and his striking game is by far the worst you'll find. With sorry offensive and defensive stand up skills, Kron has no business mixing things up on the feet. Bring the fight to the ground as soon as you're able or you'll be on the losing end of a short night.

Fighting against: Kron Gracie—The only threats posed by Kron are his submissions, so keep the fight standing when facing this young Gracie warrior. Be ready to stuff his takedowns at all times, then simply pick him apart, using fast kicks from afar to batter his vulnerable legs. Hobble Kron to ensure the fight remains where you want it: on the feet.

CLINCH STRATEGIES

Kron's clinch skills are very poor, but at least the position puts him closer to a takedown. Break free of opponent's clinches immediately, but consider using Kron's to work for takedowns when the opponent is feeding you counter knees on each shot.

Fighting against: Kron Gracie—Clinch up with Gracie to pour on the damage, but beware his ability to take you to the mat from here. It's best to keep away from Kron, but the clinch is an option if you want to go for the early KO.

GROUND STRATEGIES

Kron basically has one way of winning any fight, and that's by way of scream-inducing submission. The young Gracie has killer subs from all angles, including nasty armbars and triangles from off his back. Unfortunately, Kron's ground strikes are as slow and weak as they come, so be prepared to work for those subs. Take advantage of Kron's submission chaining ability, using it to roll from one hold to the next if the opponent manages to escape.

Fighting against: Kron Gracie—Rolling against a Gracie is never a good idea, so get back to your feet as soon as you can when Kron manages to take you down. Don't fear his weak ground and pound; simply focus on denying his submissions and standing back up. Ground strikes can be used effectively against Kron, but so can blows from any other position. Don't do Kron the favor of battling him in his world.

STAND UP STRATEGIES

Rockhold is an average striker with fast hands and feet, but he suffers from a lack of range, a susceptible chin, and low striking power. His ground game is airtight, however, so be aggressive in the stand up, using Luke's fast combos to set up takedowns. Sprinkle in superman punches from the outside to keep the opponent guessing and potentially rock them, but focus on bringing the fight to the ground, where Luke can work for chokes.

Fighting against: Luke Rockhold—Luke's striking isn't spectacular, but with little need to fear the takedown, expect Rockhold to be aggressive on the feet. Back up and counter his takedowns, slipping in sharp counters that can stagger Luke if they land flush on his vulnerable chin.

CLINCH STRATEGIES

Rockhold has good speed and excellent control in the clinch, but his strikes remain somewhat weak. Use the clinch if Rockhold's rivals lack skill here; Luke can do some damage in this position, and his takedowns are less risky to pull off here compared to standing shots.

Fighting against: Luke Rockhold—Avoid the clinch when fighting against Rockhold, as his great control allows him to complete takedowns more easily from this position. If Luke manages to tie you up, strive to break free without fearing his low-power strikes.

GROUND STRATEGIES

Rockhold has exceptional grappling ability, and his neck submissions are very difficult to escape. Score takedowns and pass to side control to lock in head arm chokes. Rockhold excels at defensive grappling as well as popping back up to his feet, so there's little need to fear the opponent's ground game. Maintain dominant ground position and keep working for chokes until you manage to force the tap.

Fighting against: Luke Rockhold—Strive to keep the fight against Rockhold standing, exploiting his limited striking ability while avoiding exposing yourself to his overwhelming ground skill. Luke's best subs are his chokes—beware of triangles while in his guard and don't let him hang onto side control. Getting up off your back can be a real chore when rolling with Rockhold, so try not to let the fight progress to the mat in the first place.

STAND UP STRATEGIES

Lyle's strength is the ground game, but he's not out of his element on the feet. Use his respectable speed and power to waltz opponents with punches and kicks. Rock opponents with a sudden head kick or spinning backfist. Beerbohm's grappling credentials mean you needn't fear takedowns, so open up with the stand up as much as you like.

Fighting against: Lyle Beerbohm—Attack Lyle's legs and body when exchanging blows with him on the feet, and aim to wear him down and take away from his offense. Expect Beerbohm to pressure you and look to counter when he closes in. Respect his takedown ability at all times and be ready to sprawl—ideally countering with a knee to Lyle's face.

CLINCH STRATEGIES

Beerbohm is slightly below average in the clinch, but the opportunity for takedowns lies in this position. Use Lyle's clinch to help him score takedowns, then follow up with some vicious ground and pound.

Fighting against: Lyle Beerbohm—Experienced clinch fighters can tie up with Lyle to wear him down, but the closeness of the position makes it risky, allowing Beerbohm to complete takedowns more easily. Employ the clinch game if you're able to control Lyle in this position and aren't afraid of potentially fighting off your back. Avoid the clinch otherwise and try to outstrike Beerbohm on the feet instead.

GROUND STRATEGIES

Lyle is a relentless wrestler with good defense against submissions, so mixing things up on the mat is where he wants to be. Throw a few strikes to set up the takedown, then use Beerbohm's exceptional passing ability to quickly reach mount, where he's free to rain down heavy leather. Lyle is somewhat proficient at neck submissions, so work for head arm chokes from side control against opponents with low grappling defense. Otherwise, simply work to pass guard and finish the fight by way of ground and pound.

Fighting against: Lyle Beerbohm—Beerbohm's ground game is his strongest suit, so avoid rolling with him if you can. Stuff his shots on the feet and deny his clinch attempts, looking to exploit his lackluster striking game to get the job done. If submissions are your game, expect to work hard to lock one in against Lyle.

STAND UP STRATEGIES

Lyman's a mediocre fighter with mostly average attributes. Be confident in his ability to take a hit, and use his overhand punch and head kicks to rock opponents. Stay aggressive with your strikes to set up clinches or takedowns—Good is well versed at the grappling game.

Fighting against: Lyman Good—Lyman's stand up is his weakest area, so use this against him when fighting him. Try to wear him out on the feet, stuffing his powerful shots and denying his clinch efforts. Regularly attack Lyman's legs to slow him down and make him an easier target for combos.

CLINCH STRATEGIES

Good is strong in the clinch, boasting excellent speed and control. Use his clinch to beat down rivals and work them over in preparation for a debilitating slam. Good's clinch strikes are not powerful, so use this position primarily to achieve takedowns.

Fighting against: Lyman Good—The clinch can be used effectively against Lyman, but only by those with great skill at controlling this position. Good's clinch strikes pale in comparison to those thrown by most others in his weight classes, so tie up with Lyman and work him over with knees and elbows, remaining wary of his takedowns.

GROUND STRATEGIES

The ground is a good place for Good, assuming he's on top—if he isn't, get him back to his feet quickly. Lyman has just one choke submission, so use his grappling skills to reach mount and pound out his rivals with fists and elbows. Lyman's ground strikes are comparatively weak, especially when fighting at Middleweight, so focus on maintaining top position and grinding out a grueling victory.

Fighting against: Lyman Good—Good's tough to hold down and even harder to submit, so taking him to the mat isn't usually the best plan. You needn't fear submissions from this ground and pounder, so there's no reason to fear taking Good down if grappling's your game. Just know that it'll be tough to finish this skilled grappler on the ground.

STAND UP STRATEGIES

Zaromskis is a gifted kickboxer with exceptional speed and able to obliterate opponents with furious striking barrages. His takedown defense isn't spectacular, however, so Marius must strike with care when facing a grappling artist. Use his great footwork to set up his array of special stand up moves, battering enemies with spinning kicks and backfists, and flying knees.

Fighting against: Marius Zaromskis—Though an offensive force on the feet, Zaromskis's poor takedown defense and susceptible chin can be exploited. Bait Marius into unleashing wild strikes, then look for heavy headshot counters or stuff him on his back with a quick takedown. Even if you aren't much of a ground fighter, sprinkle in takedowns when you fight Zaromskis to give him something to worry about on the feet—there's no need to fear his offense off his back.

CLINCH STRATEGIES

Marius retains his striking speed in the clinch, but his control falls short compared to most others in his division. He doesn't fare well off his back, either, so use the clinch sparingly and try to get things done in the realm of stand up fighting, where Marius truly shines.

Fighting against: Marius Zaromskis—Tie up with Zaromskis to slow him down and exploit his lack of clinch control. Mash him against the fence and hurl elbows at his chin, hoping to rock the kickboxer. Slam him to the mat when he's forced to block, then begin to work "The Whitemare" over with some heavy ground and pound. Focus on controlling the clinch position against Marius to keep him off balance as you wear him down.

GROUND STRATEGIES

Zaromskis has good grappling defense, but his lack of submission ability means he only wants to be raining down blows from the top position. Don't roll against tap-out artists; use Marius's great skill at returning to his feet to pop up after each takedown. Employ Zaromskis's ground and pound against unskilled grapplers if you like, but try to remain on the feet, where "The Whitemare" can do the most damage.

Fighting against: Marius Zaromskis—Planting Marius on his back is a good way to rough him up. He has good submission defense, but he won't threaten you from the bottom. Stuff Zaromskis on his back and work him over with steady ground and pound, targeting his vulnerable chin to score the KO victory from dominant position.

CLINCH STRATEGIES

Matt has great control in the clinch, making this an ideal place for him to fight. Back the opponent up on the feet so you may enter the clinch more easily, then focus on controlling the position as you score with strikes.

Slam the opponent with a takedown once he is forced to block and start working Matt's ground and pound.

Fighting against: Matt Lindland—Avoid clinching up when fighting against Lindland—his clinch game is solid, and he's much easier to beat on the feet. If Matt ties you up, look to break free of his grip when he throws his somewhat sluggish strikes.

STAND UP STRATEGIES

Lindland is a seasoned veteran with balanced skills, but he falls short of average in many statistical categories. His best place to win a fight is the clinch, so use his hand speed to throw combos, back the opponent up, and bring the fight there.

Fighting against: Matt Lindland—"The Law" has poor defensive attributes, so fight him upright and look for the KO. Expect Lindland to close in and grapple, and prevent this from happening by striking carefully, keeping your distance and remaining ready to stuff his shots.

GROUND STRATEGIES

Matt has a number of submissions at his disposal, but his skill in forcing the tap is limited. Use his ground and pound to score points and inflict damage from top position instead. "The Law" has a pretty good shot, so use it on the feet to bring the fight to the mat when you're having trouble entering the clinch.

Fighting against: Matt Lindland—Matt's ground game is decent, but nothing spectacular. Don't fear rolling with him if you're using a skilled grappler, but try to score takedowns on the feet rather than from the clinch, where Matt has good control. Shoot in for a takedown and then work some ground and pound, ending the fight with a submission after wearing down "The Law."

STAND UP STRATEGIES

Melvin's greatest assets are his speed and power on the feet—he's a complete beast at Middleweight. Sling kicks and punches to rock opponents in a blink, but beware of takedowns—Manhoef is unskilled on the ground and can be easily controlled and tapped out in this position.

Fighting against: Melvin Manhoef—Melvin may be an offensive juggernaut, but his weak chin can be his downfall when trading blows with other heavy hitters. Try to rock Melvin in the stand up battle, looking to find his glass jaw. If things go poorly on the feet, shoot in and bring Manhoef to the floor—he has poor takedown defense and is a fish out of water when planted on his back.

CLINCH STRATEGIES

"No Mercy" retains his great power and speed in the clinch, but his lack of control can get him into trouble. Avoid the clinch, using it only to get out of dangerous positions, or to give Manhoef a chance to clear his head after he's been rocked by stiff a headshot.

Fighting against: Melvin Manhoef—Use the clinch against Manhoef to shut down his stand up game and gain control over the pace of the fight. Strike his chin to entice him to block, then quickly change levels and score a takedown to bring the feared striker out of his element.

GROUND STRATEGIES

The mat is the last place Melvin wants to be in a fight, so avoid the clinch when using him and be ready to stuff the opponent's takedown at all times. If Melvin is ever stuffed onto his back, work hard at denying the opponent's attempts to pass guard, and struggle to return to the feet as quickly as possible. Melvin can unleash some effective ground and pound, but his lack of passing ability and grappling defense make it difficult for him to maintain dominant posture.

Fighting against: Melvin Manhoef—Manhoef may have a weak chin, but there's no point in testing it on the feet—bring the feared striker to the ground and brutalize him with heavy strikes, targeting his chin for the knockout. Submissions are also very effective against Melvin, so no matter what your fighter's strengths are, keep the fight on the floor to neutralize Manhoef's devastating stand up.

STAND UP STRATEGIES

Mizuto is an accomplished boxer with excellent speed on the feet and respectable striking power. Use his footwork to keep the opponent guessing as you slip in to score damage with flying knees and superman punches. Hirota has good defensive attributes, so feel confident exchanging with other Lightweight strikers. Beware of takedowns by skilled grapplers, however—Hirota is often outmatched on the ground.

Fighting against: Mizuto Hirota—Don't trade strikes with this boxer—his speed, power, and defense are his greatest strengths. Get Mizuto to exchange, then drive in with a takedown to put him on his back and out of his depth.

CLINCH STRATEGIES

Hirota is overwhelming in the clinch, owning excellent control and capable of unleashing furious strikes. Use this position to control mobile opponents, working them over with elbows and knees. Avoid tying up with grapplers, however, as Mizuto finds himself in trouble when he's slammed to the mat.

Fighting against: Mizuto Hirota—The clinch can be used to slow Hirota down when fighting against him, but ensure your warrior has excellent control in this position before tying up. The ground is where you really want to be against Mizuto, so work for takedowns from the clinch and bring the fight there. Considering Mizuto's clinch prowess, it's better to shoot in for takedowns on the feet rather than entering the clinch game against him—Hirota doesn't have the "takedown counter strike" special, so all he can do is stuff your shots.

GROUND STRATEGIES

Your strategy on the ground with Hirota is simple: Get back to your feet. Mizuto has poor grappling and submission ability, so there's little sense in entering this dangerous realm of MMA.

Fighting against: Mizuto Hirota—Strive to take Hirota down in any fight against him, exploiting his poor grappling skill to punish him on the mat. Use takedowns instead of clinch slams to bring Hirota to the floor more safely, then work for submissions—Mizuto is durable and resilient against strikes.

STAND UP STRATEGIES

“King Mo” Lawal has great speed and power in his hands and a durable chin, which allow him to mix things up on the feet. Bring the heat with Lawal, unleashing flying knees and superman punches to rock rivals from range and pressure them up close to achieve a clinch or takedown. Lawal is an outstanding grappler, so open up on the feet without fear of begin taken down.

Fighting against: Muhammed Lawal—Lawal’s good boxing and takedown ability make him a handful on the feet, but this is by far the best place to battle him. Expect him to wade in with punches in preparation for the takedown and circle away when he makes an advance. Try to engage Lawal on your terms, landing rangy leg kicks to slow “King Mo” down. Take away his speed to make him an easier target, but never throw more than a few strikes at a time or you’ll most likely be grappled to the mat.

CLINCH STRATEGIES

Muhammed works the clinch to great effect, enjoying outstanding control that’s only surpassed by legendary MMA warrior Randy Couture. Use Lawal’s boxing to back the opponent up on the feet, then clinch up and smash rivals with fast-yet-heavy strikes. Control the position to wear out opponents before slamming them to the mat, where you can apply some of his ferocious ground and pound.

Fighting against: Muhammed Lawal—The clinch is a dangerous game to play against Lawal, so avoid tying up with him by keeping distance on the feet and being ready to stuff his clinch efforts. Don’t allow “King Mo” to back you into a corner, and whenever he manages to tie you up, focus on minimizing damage and escaping.

GROUND STRATEGIES

One of the best ground fighters in MMA, “King Mo” uses his overwhelming grappling game to smother opponents on the mat, where he’s free to unleash his brutal ground and pound. If Lawal is losing the stand up exchanges, shoot for a takedown and bring the fight to the floor, working into dominant position so “King Mo” may pour on the damage.

Fighting against: Muhammed Lawal—Lawal’s submissions are nothing to fear, but his exceptional grappling and ground and pound makes him an overwhelming adversary on the mat. Strive to remain upright throughout each fight against “King Mo,” circling away from the cage, picking your strikes with care, and always being ready to stuff his powerful takedowns and clinch attempts. Avoid going for submissions on the bottom—Lawal is as tough to tap as they come, and failing a sub may land you in a very precarious position.

STAND UP STRATEGIES

“Ninja” Rua is a gifted submission artist, but his stand up game doesn’t measure up to most other fighters in his weight classes. He’s particularly vulnerable when he strikes at Light Heavyweight, so use his footwork and speed to set up takedowns. Mix in power strikes such as flying knees as well to avoid becoming predictable and potentially rock Rua’s foes.

Fighting against: Murilo Rua—When striking against Murilo, strive to stuff his takedowns, thereby nullifying his ability to apply dangerous submissions. Pick “Ninja” apart with sharp kicks and punches from range, targeting his vulnerable chin and battering his body to wear him down.

CLINCH STRATEGIES

Rua’s clinch game is weak compared to his peers, so avoid this position. Shoot in for takedowns on the feet instead of looking for clinch slams, and escape from the clinch if you’re ever tied up—Rua has poor control here.

Fighting against: Murilo Rua—You can dominate Rua in the clinch if your fighter is skilled in this area, but dissecting “Ninja” with standing strikes is the safer option. Unless you’re supremely confident in your fighter’s ground defense and clinch control, don’t do Rua the favor of closing in; keep your distance to give him little chance of scoring a takedown.

GROUND STRATEGIES

Rua’s best chance of winning a fight is on the ground, so bring his opponents to the mat as fast as you can. His wrestling isn’t great, but his grappling defense and submission ability are outstanding. Roll with opponents, looking to lock in kimuras from half guard, or armbars and triangles from the bottom. Rua’s leg submissions fail to impress, so stick with arm locks and chokes, and don’t let your opponent back to his feet.

Fighting against: Murilo Rua—Don’t go to the ground against Rua—he’s almost impossible to submit and can tap you out in a heartbeat. Stay standing and beat “Ninja” to the punch with superior striking. Always be on guard to defend against his takedowns. Should Rua pin you down, focus on denying his submissions and getting back to your feet—his ground strikes aren’t worthy of much concern.

STAND UP STRATEGIES

Diaz is a well-rounded and dangerous fighter. He's one of the best strikers in the Welterweight division, though he gives up a lot of power when fighting at Middleweight. Nick's excellent punching range and speed are his greatest assets on the feet—use his long strikes to pick foes apart without exposing Nick's vulnerable chin to counters. If things aren't going your way in the stand up department, look to clinch or shoot for a takedown to employ Diaz's impressive grappling ability.

Fighting against: Nick Diaz—Outstriking a long-reaching and swift opponent like Diaz is tough, but finding his chin is a sure way toward victory. Target Nick's head with nearly every strike, attacking his legs when you want to mix things up. Nick has very few stand up specials, so you'll primarily see traditional strikes and takedowns. Always be prepared to stuff Nick's shots and clinch attempts as you look for the knockout.

CLINCH STRATEGIES

Nick's got a great clinch game—use it to keep his chin protected as you rough up opponents. Nick's strikes gain more weight in the clinch, especially during Middleweight bouts, so use this

position to your advantage when opponents try to slip past Nick's fists. Use the clinch to score heavy damage, bringing the fight to the mat with a huge slam the moment rivals begin to block.

Fighting against: Nick Diaz—Nick has more control in the clinch than in any other position, so break free of his grip whenever he attempts to tie up. If his reach is giving you trouble on the feet, initiate the clinch yourself to damage Diaz up close. Beware his clinch takedowns, however, and try to land knees and elbows to the head to rock Nick.

GROUND STRATEGIES

Nick's high submission skill makes him very dangerous on the floor, but he lacks the dominant control over the ground game that other fighters enjoy. It's therefore best to hit the mat on Diaz's terms, slamming the opponent from the clinch

or scoring with a standing takedown. The moment you hit the ground, look to apply one of Nick's lethal chokes or arm locks. Kimuras from half guard are your go-to subs, but Nick's a little better at choke holds—pass guard and use his head arm choke or triangle to end fights fast.

Fighting against: Nick Diaz—Rolling with a submission artist like Diaz is dangerous, but Nick's lack of grappling defense can be exploited by superior ground fighters. If you're getting picked apart by his long strikes, change levels with a takedown and see if you can finish Nick off with some ground and pound or a tight submission lock. Focus on controlling the action from the top and don't remain in Diaz's dangerous guard for long.

STAND UP STRATEGIES

Thompson is a submission fighter who comes up a bit short in the striking game. He's particularly weak in this department when fighting at Middleweight, so use his fast hands primarily to set up takedowns.

Fighting against: Nick Thompson—With weak strikes and a flimsy chin, Thompson can be dismantled on the feet by talented strikers. Tap-out artists with good grappling defense can overwhelm Thompson on the ground as well, so fight your fight when facing “The Goat.”

CLINCH STRATEGIES

Thompson doesn't have the greatest control in the clinch, but his strikes gain power here, particularly when the position is used against Welterweight adversaries. Use Nick's clinch to slow down swift strikers, inflict damage, and bring the fight to the mat to work his submissions. Thompson must beware the opponent's takedowns in the clinch, however, as he isn't particularly good at ground defense.

Fighting against: Nick Thompson—Thompson can be worked over in the clinch, but it's best to avoid this position when fighting against him because it's one of his stronger areas. Batter him with strikes on the feet if you're looking for the KO, or shoot in and take him down to exploit his lack of grappling defense.

GROUND STRATEGIES

Nick's powerful submissions make him dangerous on the ground, but he suffers from a lack of grappling defense and passing ability. Fortunately, with an array of submissions and great skill in using them, “The Goat” has plenty of ways to end the fight on the mat. Score takedowns with Thompson on the feet or from the clinch, slapping on fast kimuras or armbars shortly after hitting the floor.

Fighting against: Nick Thompson—Respect Thompson's tap-out game, but exploit the gaping holes in his wrestling by denying his submission attempts and popping back to your feet each time he manages to take you down. Beware of Nick's kimuras from half guard and strive to prevent him from locking them in. If you're going to roll with Nick on the ground, make sure to pass his guard quickly and work methodically to maintain dominant top position. Wear him down with strikes and then turn his favorite finishers against him for the tap.

STAND UP STRATEGIES

An MMA icon, Pat Miletich is a very versatile fighter. His best positions are in the clinch and on the ground, however, so use his fast strikes to back the opponent up, aiming to close in and grapple. Be aggressive without fear of the takedown; Miletich is an exceptional grappler and can threaten with submissions off his back. If the opponent is winning the stand up battle, shoot in for a takedown and work Pat's strong submission game.

Fighting against: Pat Miletich—Miletich has solid stand up, but as he's much better in the clinch and on the ground, on the feet is the best place to fight him. Swing for Pat's chin, which isn't the strongest you'll find, and always be on guard against his powerful takedowns.

CLINCH STRATEGIES

Pat gains striking power in the clinch, and his control ranks among the highest in both of his weight classes. Use the clinch to score damage, manage the opponent, and protect Pat's chin. Bring the opponent to the ground as he begins to block and start looking to force the tap.

Fighting against: Pat Miletich—Entering the clinch against Miletich is unwise, so avoid this position. Clinching with Miletich only puts you closer to his powerful grappling game, so keep your distance, strike with care, and avoid letting him corner you against the cage.

GROUND STRATEGIES

Use Pat's stand up and clinch game as a means of bringing the fight to the ground, where his submission skills can end the fight in short order. Pat has excellent grappling defense, so feel confident rolling with anyone and go for broke with his subs. Try for kimuras immediately after you complete a takedown, or slip into side control and apply an even nastier head arm choke. Use triangles from Pat's back to end a fight unexpectedly as well.

Fighting against: Pat Miletich—Miletich is a handful on the ground, so it's best not to even go here against him. Defend against his powerful arm and neck submissions when he plants you on your back, aiming to stand up as soon as possible. Taking Pat down really isn't wise, so defend against his takedowns as you attempt to stagger him on the feet.

STAND UP STRATEGIES

Legendary MMA warrior Randy “The Natural” Couture is one of the best grapplers in existence, but his weak chin and vulnerable legs put him at risk while fighting on the feet. Fortunately, Couture has a terrific shot—use it to bring the action to the floor without delay.

Fighting against: Randy Couture—You’ve got to stay standing to have any chance of beating Couture. His grappling and clinch game are overwhelming, so stay light on your feet and be ready to stuff Randy’s takedowns and clinch attempts. Keep him at a distance and pick away at his legs with long kicks. Counter his advances with fast jabs and straights, pouring on the offense when you at last manage to rock the MMA legend.

CLINCH STRATEGIES

The clinch is a perfect place for Couture, who has more dominant control in this position than any other fighter. Randy also gains a huge boost to his striking power in the clinch, allowing him to wear down and even KO opponents in short order. Score takedowns from the clinch when the opponent begins to block, passing to mount and dropping some bombs.

Fighting against: Randy Couture—Avoid clinching with Couture at all costs—the famed grappler has incredible control and can inflict great damage from this position. You’re in trouble if Couture clinches up with you, so do your utmost not to end up in this position by striving to keep him at bay with footwork and counters.

GROUND STRATEGIES

Randy’s a handful on the ground, with decent neck submissions and brutal ground and pound. His ground strikes are even more powerful than his clinch blows, so use Randy’s ground and pound to batter opponents into unconsciousness. Head arm chokes are available from side control, but only attempt these against unskilled grapplers with poor submission defense. Randy’s ability to pass guard isn’t spectacular, so expect to work in order to achieve mount.

Fighting against: Randy Couture—Couture’s phenomenal grappling defense makes him a challenge to roll with. He’s nearly impossible to submit, so think twice before shooting in for takedowns unless you’re simply looking to work some ground and pound from the top. The mat may be a better place to battle Couture than the clinch, but not when you’re on bottom—deny his attempts at passing guard and get back to your feet as soon as possible. If you manage to plant Randy on his back, work patiently from the top and strive to keep him beneath you.

STAND UP STRATEGIES

“Babalu” Sobral is a submission wizard with below-average skill in most other areas of the fight game. This includes the stand up department, where Sobral suffers from a distinct lack of power. Considering he also owns a weak chin, Sobral’s stand up is best used to bring the fight to the mat. Unfortunately, “Babalu” doesn’t have a great shot, so you’ll need to be patient on the feet, using his quick strikes to create openings to shoot in.

Fighting against: Renato Sobral—Stay upright when battling Sobral—his submission game is nasty. Be prepared to stuff his takedowns at any moment as you pick him apart on the feet. Aim for his chin and try to turn his lights out, but be patient and don’t give him the chance to work on the floor.

CLINCH STRATEGIES

The clinch is a slightly better place for Sobral than the feet; his strikes gain weight here and his chin is better protected. Sobral has poor control in this position, however, so don’t let him rest here for long. Use the clinch to bring the fight to the floor, where submission opportunities abound.

Fighting against: Renato Sobral—Renato’s closer to a takedown when you tie up with him, but his sorry control allows clinch specialists to do a number on him in this position. Beating “Babalu” on the feet is always the best plan, but controlling him in a clinch and working him over with strikes can bring the fight to a sudden and dramatic end.

GROUND STRATEGIES

“Babalu” is at his best on the ground, with expert arm and neck submissions, and exceptional grappling defense. Kimuras are his best subs—they’re available right after a takedown, so you don’t need to worry about passing the opponent’s guard (an aspect of the grappling game in which Sobral doesn’t shine). Head arm chokes from side control and triangles from guard are also excellent submission options. Be quick to employ Renato’s “submission chaining” ability following failed sub attempts to roll the opponent into another submission—and avoid have “Babalu” end up on his back.

Fighting against: Renato Sobral—Sobral is good at applying submissions from various angles and has excellent defense against such moves himself, so rolling with him isn’t wise. His poor passing ability makes him somewhat easy to hold down if you score a takedown, however, and ground and pound can be used quite effectively against Renato if your fighter’s good at it. Don’t even consider hitting the mat with “Babalu” without a ton of grappling defense, however—Sobral’s submissions are incredibly dangerous, and with the ability to string them together, he can end your night in a blink.

STAND UP STRATEGIES

"Ruthless" Robbie Lawler is a fast and powerful puncher—one of the hardest-hitting fighters in both the Middleweight and Welterweight divisions. Use his array of special strikes, including flying knees, overhands, and superman punches, to rock opponents from unexpected angles. There's no place Robbie would rather be than winging fists in the cage, but he must beware his rivals' takedowns and clinch attempts—Lawler isn't a strong grappler.

Fighting against: Robbie Lawler—"Ruthless" is just that when striking, so don't trade blows with this knockout artist. Be savvy with your strikes, working Robbie's vulnerable legs and body with kicks from range. Lawler's much easier to handle on the ground or in the clinch, so look for chances to tie up with him or drag him to the mat, thereby bringing him out of his game.

CLINCH STRATEGIES

Lawler lacks control in the clinch—in fact, his clinch control ranks the worst in both weight classes he fights in. Avoiding the clinch game is therefore important; always be ready to stuff your rivals' clinch attempts and avoid backing up too close to the fence. Beware of takedowns if you're ever tied up and struggle to break free fast.

Fighting against: Robbie Lawler—The clinch is an excellent position to use against Lawler because it helps you control his power. Back him up with leg and body kicks to stuff him against the cage, or try tying up with him when he becomes overzealous with his strikes. Once you gain the position, strive to maintain control as you punish Robbie with relentless elbows and knees. Slam him with a takedown when he's forced to block and end his evening with an unforgiving submission.

GROUND STRATEGIES

Lawler is a substandard ground fighter with lackluster grappling skills and almost no submission ability. His punches actually become weaker on the ground, and his passing ability is poor enough to make moving him into dominant position a chore. Stuff those takedowns and stick with the stand up game when using Robbie.

Fighting against: Robbie Lawler—Exploit Lawler's lack of ground game by dragging him to the floor and working to secure the tap. You've little to fear from Lawler on the floor, so bring the fight here when he opens up with strikes and keep him on his back to grind out a victory.

STAND UP STRATEGIES

Roger has the worst stand up in his division, so don't expect to enjoy much success with him on the feet—focus on scoring takedowns by any means necessary. Roger's clinch is lackluster as well, so go for shots and bring the opponent down when he becomes overconfident in his significant stand up advantage.

Fighting against: Roger Gracie—Though Gracie's stand up is atrocious, his submission skills are dominant. Respect his ground prowess when fighting against him by striking tactfully, picking your shots to remain guarded against Roger's takedowns. Target his vulnerable legs and chin with crisp combos—it won't be long before he's had enough.

CLINCH STRATEGIES

The clinch is a better place for Gracie than the feet, but takedowns are what he's really after. Use the clinch primarily to score a punishing slam that puts Roger in position to end the fight via tap out.

Fighting against: Roger Gracie—Roger can be controlled in the clinch by experts, but with stand up skills as poor as his, there's little point in tying up with him. Stay standing and stuff Gracie's clinch efforts as you punish him with leg kicks from range.

GROUND STRATEGIES

Boasting the best submission skills in the Light Heavyweight division, Roger is a force to behold when rolling on the ground. Find a way to bring the fight to the floor, where a submission victory is always just moments away. Gracie has tremendous skill in all forms of submission, and a vast pool of holds to draw upon. Slap on your favorite sub, and if it happens to fail, roll the opponent into another one using Roger's "submission chaining" special.

Fighting against: Roger Gracie—Gracie's ground game is overwhelming in all areas except ground and pound. Avoid rolling with Roger, but if he manages to take you down, focus on denying his submission attempts and scooting back to your feet, rather than worrying over his slow and unimpressive ground strikes. Beware Roger's ability to string submissions together and be ready to counter this special skill the moment you manage to slip free of his holds.

STAND UP STRATEGIES

The Middleweight division's most dominant submission grappler, "Jacare" Souza suffers from a lack of power and reach on the feet, making the stand up his weakest area. Be aggressive with Ronaldo's combos as you look for the takedown.

Fighting against: Ronaldo Souza—When facing a submission master like "Jacare," keeping the fight upright is paramount. Fear his explosive takedowns and be ready to sprawl at a moment's notice. Souza's chin is somewhat suspect, so sling sharp strikes at his head to eventually rock him.

CLINCH STRATEGIES

Souza is a force in the clinch, enjoying excellent striking speed and control. His strikes gain a bit of power here as well, but they remain comparatively weak, so primarily use the position to protect Ronaldo's chin and set up takedowns.

Fighting against: Ronaldo Souza—Steer clear of the clinch battle when facing "Jacare." Strike with caution so you can stuff his attempts to tie you up. Keep the fight standing and look to rock Jacare with precision headshots.

GROUND STRATEGIES

Ronaldo's masterful grappling and submission ability make him the most fearsome Middleweight ground fighter. He knows almost every submission and can apply them with tremendous force. Use Souza's excellent shot to bring the fight to the ground, then use his superior control and "submission chaining" ability to ensure the opponent doesn't get back up.

Fighting against: Ronaldo Souza—Ronaldo's a scary individual when rolling on the ground, so avoid going to the mat. If you find yourself flat on your back, focus on denying his submission attempts and be ready to counter his "submission chaining" ability each time you manage to slip free of a hold. Souza's stamina and ground and pound are slightly below average, so tire him out from the bottom by countering his moves.

STAND UP STRATEGIES

Satoru is a decent striker, but the ground is where he wants to fight. His takedown ability is poor, unfortunately, so you'll need to work to bring the action to the floor. Be aggressive, slinging fast combos to set up opportunities to shoot.

Fighting against: Satoru Kitaoka—When fighting against Kitaoka, be careful with your striking and always be ready to stuff his unimpressive takedowns. Target his susceptible chin, hoping to rock him with a lucky shot. He has no special strikes to speak of, which makes his attacks slightly easier to predict and counter.

CLINCH STRATEGIES

Satoru suffers from sorry clinch control, so this isn't an ideal spot for him. Use it to bring the fight to the mat, performing his "jump guard takedown" ability from the offensive Muay Thai clinch to drag his opponent down when you're having difficulty scoring traditional takedowns.

Fighting against: Satoru Kitaoka—The clinch can be worked effectively against

Kitaoka, but avoid sacrificing position here or giving up the takedown. Use superior control to keep Satoru in a defensive posture as you sneak in strikes, focusing on cracking his vulnerable chin.

GROUND STRATEGIES

Satoru's ground game is his greatest strength—he boasts excellent grappling defense, along with powerful leg and neck submissions. Kitaoka has no armbars or triangles, but his impressive array of leg locks make him dangerous while lingering in his opponent's guard.

In fact, this is the ideal place to be—fire punches at the opponent while postured up or stacked up in their guard, opening the foe up for heel hooks and kneebars. Satoru's outstanding grappling defense means he has little reason to fear begin submitted from these positions.

Fighting against: Satoru Kitaoka—The ground is the worst place to fight Kitaoka, but if you're using a skilled grappler, consider taking him to the ground and holding him there, exploiting his poor ability to get back to his feet as you score points with tactful ground and pound. Don't let Satoru remain in your guard—he has too many submissions from here. Sweep him or get back to your feet as soon as possible.

STAND UP STRATEGIES

Smith is a fast puncher with knockout power, but his weak chin and vulnerable body must be taken into account when striking. Scott has excellent blocking ability—be sure to use it when trading with other powerful strikers. Be tactful with Scott's offense, throwing fast hands and leaving few openings for the opponent to grapple or counter your attacks.

Fighting against: Scott Smith—Trading punches with Smith is risky, so use movement to pick him apart with surgical strikes from range. Batter his soft body with kicks and punches, sapping away his unimpressive stamina.

CLINCH STRATEGIES

Smith has poor control in the clinch, so avoid this position when facing strong grapplers. The clinch only puts Scott closer to being taken down, and his vulnerable body is easier to batter while his hands are tied up. Remain on the feet, using Scott's strong blocking to buy time to recover when he's rocked instead of clinching.

Fighting against: Scott Smith—Use the clinch against Smith to neutralize his explosive striking. Attack Scott's body on the feet to get him backing up, then lock horns and stuff him into the cage. Focus on landing body shots in the clinch and dropping Scott with punishing knees to the ribs.

GROUND STRATEGIES

Scott has decent ground and pound, but his lack of mat defense makes the floor a dangerous place for him. Scott also has trouble getting off his back and lacks submission skill, so keep off the mat and go for the knockout on the feet instead, striking with care to avoid being taken down.

Fighting against: Scott Smith—Softening up Scott's body with calculated strikes to get him blocking, then stuff him onto the mat. Smith struggles at returning to his feet, so control him easily on the ground, slipping in body shots as you pass guard on your way to a KO or submission victory.

STAND UP STRATEGIES

Shinya Aoki is one of the best submission fighters in MMA, but his stand up game is pretty awful—his reach is short and his strikes are among the weakest you'll find. Shinya wants to be on the ground, but his poor takedown ability can make bringing the fight here a challenge. Be brazen with Aoki's stand up, using his great speed to pressure the opponent until you manage to close in and grapple.

Fighting against: Shinya Aoki—Avoiding the ground game is paramount when facing off against Aoki, so be ready to sprawl against his unimpressive takedowns at all times. Tag Aoki's chin with fast, sharp strikes, looking to rock him as damage to his head piles up.

CLINCH STRATEGIES

Shinya has decent control in the clinch, but his strikes are even weaker here, so the position is best used to score takedowns when your standing shots are being countered. Use Aoki's Muay Thai clinch to perform the rare "climbing armbar" special, dragging opponents to the ground and immediately rolling them into dangerous armbar submissions.

Fighting against: Shinya Aoki—Aoki's "climbing armbar" special means he's able to tap you out from the clinch—an extremely high-level move. Beware this ability and strive to keep clear of his clutch. If Shinya manages to lock up with you, focus on denying his submissions and takedowns to tire him—you don't need to fear his feeble strikes.

GROUND STRATEGIES

Fighting on the ground is a blast when using Aoki. The submission whiz has mastery over every hold in the game and is able to tap his rivals from any position, including their own guard. His exceptional passing ability and grappling defense means he can work into or out of any position he chooses. Should the opponent manage to escape a joint lock or stranglehold, use Shinya's "submission chaining" skill to instantly roll your foe into another death lock. It's only a matter of time before the fight is brought to an end once Aoki gets his man on the mat.

Fighting against: Shinya Aoki—Don't even think of rolling with "Tobikan Judan" on the ground—stay as far away from his grasp as you can and be ever vigilant to stuff his takedowns and clinch attempts. If Aoki manages to drag you down, focus on denying his submissions and guard passes—his strikes aren't powerful enough to concern you unless he throws them in volume. Frustrate Aoki by denying his offensive grappling game until he's forced to open up with ground and pound, then sneak out and return to your feet.

STAND UP STRATEGIES

Kawajiri is an average Lightweight fighter who finds himself largely outclassed at Welterweight.

His stand up is the weakest aspect of his game—use his speed to score fast strikes on your way into the clinch or takedown. Kawajiri has good defensive attributes, so don't worry about mixing things up with other strikers if you think you can exploit a weakness on the feet.

Fighting against: Tatsuya Kawajiri—Keep “Crusher” standing up when fighting him, preventing him from working his clinch game and ground and pound. Stuff his lackluster shots and strike back with your favorite combos. Kawajiri is equally strong in all areas of defense, so pick him apart however you like. Don't worry about Tatsuya's takedowns; they aren't great, and he isn't the most dominant fighter you could have on top of you.

CLINCH STRATEGIES

The clinch is a good place for Kawajiri, but his control could be better here, so only use the position when you're the instigator—defend and break free when your opponent ties you up. Maintain control in the clinch by striking with care, doing a bit of damage as you set up the takedown slam.

Fighting against: Tatsuya Kawajiri—If striking's your game, keep away from the clinch and pick Kawajiri apart on the feet—there's no need to take the fight here. However, if your warrior is a gifted grappler, use the clinch against Tatsuya to work him over and bring him to the mat on your terms.

GROUND STRATEGIES

Bring the fight to the mat when using Kawajiri, but don't feel overly confident down here—there are far better wrestlers than “Crusher” around. Focus on controlling the action from the top,

using rapid strikes to set up passing opportunities. Tatsuya has a variety of submissions, but his skill in finishing them is poor—avoid risking submissions, especially leg locks, because failing one can land Kawajiri on his back. Simply strive to score points on the ground by controlling the action and grinding down opponents with strikes.

Fighting against: Tatsuya Kawajiri—Tatsuya's ground game is solid, but not overwhelming. If you're using a gifted grappler, put “Crusher” on his back and then work patiently, wearing him out with strikes as you move for the submission finish. When underneath Kawajiri, focus on countering his passes and returning to your feet instead of worrying over his weak ground strikes.

STAND UP STRATEGIES

A well-rounded fighter, Kennedy can end a fight in any position. On the feet, he has good speed and excellent power for a Middleweight—punish the opponent with stiff punches and kicks. Tim also has good takedown ability and can work some brutal ground and pound from the top, allowing you to take the fight wherever you like.

Fighting against: Tim Kennedy—Kennedy's striking power and takedown ability must be respected, so attack with caution on the feet. Use speed and footwork to back him up while remaining ready to stuff his shots. Look to clinch up with Kennedy—he's most vulnerable there.

CLINCH STRATEGIES

The clinch is Tim's weakest area, so it's best to steer clear of this chaotic position. Get things done on the feet or ground instead, blocking the opponent's clinch strikes and breaking away from his grasp whenever he ties you up.

Fighting against: Tim Kennedy—Take the sting out of Kennedy's strikes by clinching up with him to deliver knees and elbows of your own. Focus on controlling the position, respecting Tim's takedown ability by being patient with your strikes. Keep Kennedy tied up to inflict damage, slamming him to the ground when he's forced to block.

GROUND STRATEGIES

Strike with opponents to get them focused on the stand up battle, then quickly change levels and use Tim's strong takedown ability to bring the fight to the mat. Tim has excellent grappling defense, good passing ability, heavy ground and pound, and great choke holds—use these talents to control the opponent as you move to dominant position, landing brutal ground strikes or locking in a nasty choke.

Fighting against: Tim Kennedy—Being stuck beneath Kennedy is no picnic, but he's far less threatening when he's the one on the bottom. When Tim's on top of you, prevent him from passing beyond half guard to limit his offensive options and get back up to your feet. If you manage to slam Kennedy to the mat, work to control him as you land strikes to score points. Tim has great grappling defense, but can have trouble getting off his back. Deny his attempts to sweep you while grinding away with point-scoring strikes.

STAND UP STRATEGIES

Sylvia's long reach and powerful strikes make him very dangerous on the feet. His clinch game and grappling are weak, however, so strive to keep the fight standing when using Tim. Land long jabs and leg kicks to damage opponents from the outside, remaining constantly guarded against their attempts to clinch with you or slam you to the mat. Sylvia's long legs are highly vulnerable to kicks—look to counter the opponent's leg attacks with fast hooks and straights to potentially rock them.

Fighting against: Tim Sylvia—Striking with a powerful and rangy kickboxer like Sylvia isn't wise, but his shaky legs present a tantalizing target. Batter Tim's stalks with crisp leg kicks, but beware his ability to counter with stiff straights that can rock you. Use leg kicks to give Tim something to think about on the feet, then switch tactics and go for the clinch or a takedown.

CLINCH STRATEGIES

Sylvia's clinch control is abysmal, and being so close to his opponents negates the great reach advantage he often enjoys. Don't bother clinching up with Tim's opponents; use his long strikes to wear down rivals from range on the feet instead.

Fighting against: Tim Sylvia—When you tire of being knocked around by Sylvia's long reach, use movement to slip in and lock up with him. Stuff Tim into the fence and batter him with elbows and knees to the head, controlling the position for as long as possible. The moment he begins to block, plant him on his back with a demoralizing slam.

GROUND STRATEGIES

"The Maine-iac" is one of the worst ground fighters in the Heavyweight division, outdone only by Bob Sapp. He has almost no chance of passing guard, and his sorry ground defense leaves him open to sweeps and submissions. Use Sylvia's excellent reach and striking ability to keep the opponent at bay, making it difficult for him to shoot in with takedowns.

Fighting against: Tim Sylvia—Sylvia likely won't try for takedowns, so you'll be the one instigating the ground game. Use movement and leg kicks on the feet to put him off balance, creating opportunities to dash in and grapple him to the mat. Tim has little ability to defend himself on his back and even less chance of mounting any offense. Pin Tim down and work him over with strikes as you move to secure the submission victory.

STAND UP STRATEGIES

"T-Wood" is a good Welterweight striker with excellent takedowns—use his striking ability to set up his shots. Woodley has great defense, so don't be afraid to mix things up on the feet. Be aggressive with fast punches, creating openings to shoot in and bring the fight to the floor.

Fighting against: Tyron Woodley—Woodley's weakest area is the stand up game, but you must respect his takedown ability when you fight him here. Pick your shots, remaining light on your feet and ready to deny his attempts at grappling. Woodley's a rugged and durable fighter, so expect to work hard before you break him down.

CLINCH STRATEGIES

Tyron can use the clinch very effectively, shutting down his opponents' offense and placing them in danger of a powerful slam. Employ Woodley's clinch against knockout strikers to dominate them with Tyron's excellent control in this position. Unleash a barrage of strikes the moment you clinch up, planting your opponent on his back the instant he is forced to block.

Fighting against: Tyron Woodley—Steer clear of the clinch game when battling "T-Wood"—the wrestler has too much control in this area. When Tyron ties you up, focus on denying his takedowns as you struggle to break away.

GROUND STRATEGIES

Woodley is at his best when he's on top of his grounded opponent, bashing him with heavy leather. Tyron's the best wrestler in the Welterweight division, so his control is dominant—but he lacks submission skill. Use Woodley's exceptional grappling ability to maintain top position, cracking the opponent with heavy shots to get him blocking before passing his guard. Work your way to mount, then rain down fists and elbows until the fight comes to a dramatic end.

Fighting against: Tyron Woodley—Unless your fighter has extremely poor ground defense, Woodley's submissions aren't worthy of concern. His excellent ground control is another matter—it's tough getting up when Woodley has got you pinned down. Strive to stuff Woodley's takedowns so the fight never comes here, and whenever you're brought to the mat, do your best to prevent Tyron from passing your guard as you look for a chance to scramble back up.

CLINCH STRATEGIES

Though Vitor lacks clinch control, he can use the position to help him bring opponents to the mat, where his submission game can overwhelm. Use the clinch to score slams when opponents are countering your stand up shots with knees.

Fighting against: Vitor Ribeiro—Clinching up with Vitor isn't wise—it puts him closer to a takedown, which places you in danger of being quickly submitted. Stay away from the clinch game and keep Ribeiro at bay with rangy leg kicks that will eventually add up to slow him down.

STAND UP STRATEGIES

Vitor has blazing speed on the feet, but his striking power is among the weakest in the Lightweight division. His defensive attributes also fail to impress, so don't trade blows on the feet for long. Be aggressive with Vitor, seeking to score a takedown that puts you in position to lock in one his arm-wrenching kimuras.

Fighting against: Vitor Ribeiro—Keep striking when fighting against Ribeiro, stuffing his shots to keep the fight on the feet. Vitor's lack of power makes him less than threatening in the stand up—keep your distance and kick his vulnerable legs out from under him.

GROUND STRATEGIES

Ribeiro is one of the strongest submission wrestlers in the Lightweight division, so use his speed on the feet to bring the fight to the ground, where he can force the tap with a lightning-fast kimura from half guard, along with plenty of other devious holds. If the opponent foolishly puts you on your back, look for triangles, armbars, and inverted kneebars from the bottom. Keep the action on the ground once you get here and use Vitor's "submission chaining" special to keep his holds rolling.

Fighting against: Vitor Ribeiro—Ribeiro is one of the scariest guys you could roll with in the Lightweight division, so you can never feel comfortable fighting him here. Keep Vitor on his feet and pick him apart with crisp jabs and leg kicks from range, wearing him down to take away from his ability to bring you to the mat. Play defense if Vitor ever gets you down, striving to deny his submissions and looking for any opportunity to get back up again.

GROUND STRATEGIES

Matyushenko's ground game isn't spectacular, but his best position in a fight is on top of his opponent, hammering him with strikes. Unfortunately, Vlad's wrestling abilities are not great—strike tactfully on the mat, focusing on keeping your rival pinned down for as long as possible. Avoid going for submissions unless you're facing a very inexperienced grappler—Vlad isn't great at securing the tap, and failing a sub can land him on his back.

Fighting against: Vladimir Matyushenko—"The Janitor" has some skill at armbars and chokes, but most Light Heavyweight fighters have enough defense to easily avoid these submissions. Vladimir has trouble getting off his back, so feel free to roll with him if you're using a skilled grappler. Take your time on the ground and exploit Matyushenko's lack of defense here by sneaking him into a sub.

SPECIAL MOVES

Spinning Backfist	Strike	Standing
Takedown Fake	Strike	Standing
Teep Kick	Strike	Standing

STAND UP STRATEGIES

Vladimir is a veteran Light Heavyweight who can get things done anywhere in a fight, but he doesn't particularly shine in any one area. Play to your opponents' weaknesses when using Matyushenko, taking the fight where they're least likely to overwhelm you with superior skill.

Fighting against: Vladimir

Matyushenko—Matyushenko's a purely average striker—batter him with body blows on the feet to soften him up and drain his lackluster stamina. Vlad's far from the greatest grappler as well, so clinch up or shoot in and bring the fight to the floor if submissions are your game.

CLINCH STRATEGIES

Vladimir can get things going in the clinch, but his unimpressive control can allow superior grapplers to overwhelm him here. Use Matyushenko's clinch only if the opponent can be controlled; avoid tying up otherwise by keeping your distance and shooting for takedowns on the feet.

Fighting against: Vladimir Matyushenko—Many Light Heavyweight fighters can control Matyushenko in the clinch, so use the position against him if you feel like roughing him up on the inside. Be wary, though: the clinch places you in greater risk of Vladimir's takedowns, and "The Janitor" has some talent for ground fighting.

Important:

Prima Games has made every effort to determine that the information contained in this book is accurate. However, the publisher makes no warranty, either expressed or implied, as to the accuracy, effectiveness, or completeness of the material in this book; nor does the publisher assume liability for damages, either incidental or consequential, that may result from using the information in this book. The publisher cannot provide any additional information or support regarding gameplay, hints and strategies, or problems with hardware or software. Such questions should be directed to the support numbers provided by the game and/or device manufacturers as set forth in their documentation. Some game tricks require precise timing and may require repeated attempts before the desired result is achieved.

Stephen Stratton has authored over 40 guides in his seven years with Prima. His personal favorites include *Mass Effect*, *Command & Conquer 4: Tiberian Twilight*, *Command & Conquer: Red Alert 3*, *WWE Raw 2*, and the *WWE Smackdown* series.

Steve is a lifelong video gamer who attended the Rochester Institute of Technology in Rochester, NY. In addition to his Prima Games guides, he also held a staff position with Computec Media and managed the strategy section of their incite.com video game website.
